More modern economists agree with the classical view that the estate tax cannot be recovered through higher prices, but their reasoning does not proceed along the line of marginal-cost analysis described above. They reject the theory that prices are inflexibly geared to the marginal cost of production because they recognize that price inequalities may persist in an economy characterized by monopolistic rather than "pure" competition. Nevertheless, each producer charges whatever price he believes will yield him the largest return, in the light of the competition he must face and of the monopolistic advantages (trade names, location, prestige, and so on) he enjoys. A revision in his expectations about the rate of estate taxes can hardly alter his view of the optimum price for his product, although conceivably it would overcome his inertia and impel him to make a change that would have been advisable previously. Even under modern economic analysis, then, Smith's conclusion as to the incidence of a death tax seems correct.

The traditional objection to the inheritance tax has been that it destroys productive capital by transferring wealth from private hands to the government. As expounded by Adam Smith, the theory rested on the assumption that taxes on the transfer of property "increase the revenue of the sovereign, which seldom maintains any but unproductive labours, at the expense of the capital of the people, which maintains none but productive." [19] In urging in 1924 that the federal estate tax rates be reduced, Secretary of the Treasury Andrew Mellon said:

> Death taxes are taxes upon capital. It is obvious that, if the government, to maintain itself, were to take 50 per cent of every estate, small or large, and if on the average in the course of a generation a man could not double his inheritance, there would be an actual depletion of capital within the country and ultimately nothing would be left to tax. This is clear enough. . . .[20]

Others have echoed the same theme.

[19] Supra note 17.

[20] Mellon, "Economic Aspects of Estate and Inheritance Taxation," 39 Trust Companies 708, 709 (1924).

The theory cannot be accepted without important qualifications. First, as already indicated, we do not know what adjustments the decedent made in the light of his expectations about the tax. Did he save more than he otherwise would have? If so, the transfer of part of his savings to the government does not reduce what would have been the aggregate of private savings in the absence of a tax. Second, one must compare the use to which the government puts the tax revenue with the use to which the heirs would have put the same funds. If they would have dined on guinea hen and champagne, the government's use of the tax revenue to build dams would serve to increase total national investment. If, on the other hand, they would have invested in new enterprises while the government increases the salary of its employees, total national investment is less for the tax.[21] Finally, if the estate finds it necessary to sell part of its assets (for example, shares of a family corporation) to pay the tax, the transfer will have an impact on total investment. This effect will depend upon the source from which the new owners of the securities draw the funds that make up the purchase price. If they curtail consumption to finance the purchase, the transfer of the securities will increase the investment of the new owners by as much as it decreases the investment of the estate, leaving total investment unchanged. If, on the other hand, the purchasers of the securities employ funds that otherwise would have gone into another investment, the tax has compelled the estate to reduce its investment without a corresponding increase in the investment of others. Then total private investment would tend to decline.

These three effects of the tax on total national investment (change in the original owner's savings, change in the government's expenditures, and change in the expenditures of those to whom the estate sells) need not be exerted in the same direction, and any conclusion about their net result would be precarious indeed. Consequently Secretary Mellon's simple prediction, which has enjoyed surprisingly wide acceptance, must be rejected.

Even if the estate tax could be shown, on balance, to discourage investment, it could not be condemned out of hand. For most contemporary economists recognize that the economy may be served better at one time by increasing total consumption and at another by increasing the volume of investment. And, as we have become painfully aware in recent years, there are times when expenditures for capital-destroying ends like armaments may serve the public (and even the heirs themselves) better than any other use of the funds.

It is sometimes asserted that a great fortune can no longer be accumulated, either because of high income tax rates or for other reasons, and that estate and gift taxation is therefore becoming an anachronistic survival of happier days. Although there is no statistical information, the premise is questionable. It is not likely, to be sure, that anyone could now accumulate a fortune that would be respectable by late nineteenth century standards if he had to rely upon salaries, dividends, or interest, since income of this nature may generate an effective income tax rate as high as 77 per cent (1964 rate). But the lower rate on long-term capital gains — and, in a more specialized field, the boon of percentage depletion — still hold out hope to the ambitious. It was reported in 1950 that a manufacturer of home permanent wave kits ("Which Twin Has the Toni?") had, at the age

---

21 Of course, no government expenditure can be allocated to a specific tax collection, and even the total volume of expenditure is sometimes (for example, during a war) uninfluenced by the volume of revenue. Consequently it might be argued that the extent of investment by the government is independent of the estate tax yield. Then the effect of the tax on investment would depend upon (1) whether the decedent had accumulated more during his lifetime in anticipation of the tax, and (2) whether, when investments are sold by the estate to pay the tax, the buyers curtail consumption in order to raise the purchase price.

of 33, sold out a company in which he had invested $1000 four years earlier, for $20 million.[22] The tax on capital gains would take only 25 per cent of the profit. The Levitt family is said to have made more than $5 million on a single year's construction activities, of which at least a portion was capital gain rather than ordinary income.[23] A happy combination of capital gains and percentage depletion is reported to have created a new crop of millionaires in the previously unassuming state of Texas.[24] Moreover, unrealized appreciation in property is not reached by the income tax, and a 1963 proposal by President Kennedy to alter this aspect of existing law was rejected by Congress.[25] Thus, stock or real estate will generate no income tax liability at all if held until death. A wise, or even a fortuitous, investment may be the seed that grows into a great fortune without any diminution by the Internal Revenue Service. Although one cannot know how many persons have become millionaires in recent years, it seems likely that, as long as the income tax laws continue to leave the door open to substantial accumulations, the estate and gift taxes will have a task to perform.

The federal government imposes an *estate* tax, while most of the states impose *inheritance* taxes. The traditional differentiation between them is that an estate tax is levied on the privilege of transmitting property at death, while an inheritance tax is on the privilege of receiving property from the dead. Terminology aside, the distinction is between a tax graduated according to the size of the decedent's entire estate and one that is graduated for each beneficiary according to the size of his share and his relationship to the decedent.

Theoretically an estate tax is simpler to administer than an inheritance tax, because it is not necessary to place a value on each beneficiary's portion, a task of some complexity when future interests are involved. Yet the federal estate tax does not escape this problem altogether. A deduction has always been allowed for charitable bequests, and in 1948 a "marital deduction" was inaugurated for property passing to a surviving spouse. Both deductions introduce inheritance tax characteristics into the estate tax structure. Moreover, it is becoming ever more common to provide (either by will or by statute) that the federal tax shall be apportioned among the various property interests that constitute the estate, instead of falling, as do other debts and charges, on the residuary alone. Although such an apportionment is not binding on the Treasury, which can collect the tax from any part of the estate, the executor must value each beneficiary's share in order to apportion the tax in accordance with the testamentary or statutory scheme.

Since the inheritance tax is graduated according to the heir's relationship to the decedent, it could be employed to penalize close family control of the decedent's fortune. This is a function that the estate tax, ordinarily taking no account of the beneficiary's identity, could not perform. In point of fact, however, the inheritance tax rate schedules place a premium on transfers to direct descendants, the purpose of breaking up family accumulations being overbalanced in this instance by an ethical view that direct descendants have a birthright claim to the wealth while legacies to collateral relatives and "strangers" are in the nature of windfalls. (The federal "marital deduction," mentioned in the preceding paragraph, makes a similar concession in the case of property passing to the decedent's widow or widower.) Thus, in Massachusetts, the tax on "Class A beneficiaries" (spouses, parents, children, and grandchildren) ranges from 1 per cent on the first

---

[22] Life, April 4, 1949, page 72, 84.

$10,000 received to 9 per cent on the excess over $1 million. The rates on "Class B beneficiaries" (lineal ancestors other than parents, lineal descendants other than children and grandchildren, daughters-in-law, and sons-in-law) range from 2 per cent to 11 per cent; on "Class C beneficiaries" (brothers and sisters, nephews and nieces, step-children, and step-parents), from 4 per cent to 15 per cent; on "Class D beneficiaries" (all others), from 6 per cent to 15 per cent. The classifications and rates vary among the 40 states that impose inheritance taxes, but the broad outline is the same: close rather than distant beneficiaries are favored by the inheritance tax rates. Indeed, in the first state inheritance tax (1826), Pennsylvania exempted direct heirs altogether, setting a pattern that was not broken until the last decade of the nineteenth century.

In another respect, however, a graduated inheritance tax encourages the dispersion of wealth more than the estate tax. Being graduated separately for each beneficiary's share, such an inheritance tax penalizes less heavily the fortune that is divided among two or more beneficiaries (of a given statutory class) than one that goes to a single member of that class. To take Massachusetts as an example again, if an estate of $300,000 were left to one child, the tax would be $13,650, while if the same estate were divided among three children, the tax on each share would be $3,150, and the total tax $9,450. Although a tax difference of this size is hardly an incentive to dispersion, the inheritance tax contains a seed that might be nurtured into effective life. The estate tax, on the other hand, does not discriminate among recipients of the decedent's bounty (except for the charitable and marital deductions) and, since the rate fluctuates only with the size of the *entire* estate, it does not place a heavier burden on an estate that is transferred to a single beneficiary than on one that is split up among a number.

Neither an estate nor an inheritance tax could be very effective if it reached only property owned by the decedent on the date of his death. Indeed, the larger the fortune, the more feasible it would ordinarily be to avoid a death tax by inter vivos gifts. The problem was recognized and met in Pennsylvania's 1826 statute, mentioned earlier, which reached out to bring into the taxable estate any property whose transfer was "intended to take effect, in possession or enjoyment after the death" of the transferor. It has since become standard operating procedure to include such a provision in death tax statutes; its exegesis is the subject of extended study in this book. In 1891, the New York inheritance tax law introduced another now famous clause, which subjected to the death tax any property that the decedent had transferred during his lifetime "in contemplation of death." These clauses, and other provisions with a similar aim, have extended the web of both the estate and the inheritance tax to catch much peripheral property, which is added to that which the decedent owned outright at the time of death in computing the tax.

Property may still be transferred during one's life, and thereby escape death tax, if the transferor retains no strings and is not acting "in contemplation of death." Estate and inheritance taxes are to that extent ineffectual as revenue measures and, more important, as instruments for reducing inequality of wealth. Indeed, one commentator has observed:

> Until recently, the whole system of levies in the United States could be regarded mainly as a penalty on those whose benefactors failed to pass down their property before death. That any revenues were forthcoming is presumably attributable to untimely deaths, to utter distrust of beneficiaries, or to mere disregard of their interests.[26]

To block this route by which assets may be transmitted from one generation to another without payment of estate or inheritance tax, the federal government

[26] Simons, Personal Income Taxation (University of Chicago Press, Chicago, Ill., 1938) 131.

and 12 states have enacted a gift tax. As will be seen more fully later, an inter vivos transfer may still be cheaper than a transfer at death, because of the gift tax's lower rates, generous exemptions, and separate scale of progression, although there are also counterbalancing tax advantages in postponing the transfer of one's property until death. If a transfer during life is subjected to a federal gift tax and ultimately is determined to be subject to the federal estate tax as well (because, for example, it was made "in contemplation of death"), the estate may be permitted to credit the gift tax as a "down payment" on the estate tax liability.[27] Needless to say, the line separating transfers subject only to gift tax from those that engender estate tax liability as well is often established only by litigation.

The difficulty of drawing this line of demarcation and, even more, grave doubt whether it should exist at all have led to proposals for merging the two existing levies into an "integrated transfer tax." [28] Such a tax would impose — as today's federal gift and estate taxes do not — about the same total tax burden on an estate transferred piecemeal over the years as on one that is held intact until death. The existing dual structure may foster an earlier division of wealth, presumably a socially desirable trend, but the extent to which it does so is problematical. The volume of gifts reported to the Treasury is surprisingly meager.[29] An integrated transfer tax would have advantages that might outweigh any favorable aspects of the present discrimination in favor of lifetime gifts.

Integration has another aspect: What is (or should be) the relationship between gift and death taxes, on the one hand, and the income tax, on the other? As the law now stands, a transfer of property from father to son may be complete enough so that a gift tax must be paid by the father, yet the yield from the transferred property may still be taxed as his income. Contrariwise, a transfer may be insufficiently final to require payment of gift tax, yet complete enough to terminate the father's income tax liability. Similarly, a transfer may shift the income tax liability although the property will be subject to the estate tax as part of the transferor's estate, and vice versa. Judge Jerome N. Frank has suggested that the concept of a transfer is so different from one taxing statute to another that different verbal symbols might be used "to describe the taxable conduct in the several statutes, calling it a 'gift' in the gift tax law, a 'gaft' in the income tax law, and a 'geft' in the estate tax law." [30] The statutory anomalies spring from minor differences in phraseology rather than from rational policy, and one proposal for integrating the estate and gift taxes provides for "correlating" the substituted transfer tax with the income tax.[31] The aim is to tax the income from the property to its original owner until he relinquishes enough control to warrant payment of the transfer tax, but to relieve him of income tax liablity thereafter.

Another anomaly in the relation between the gift and estate taxes and the income tax is the transferee's "basis" for property received by gift or inheritance. Suppose the value of stock purchased by the original owner for $100 per share

---

[27] The credit sometimes equals only a part of the gift tax paid, rather than its full amount. Infra page 1330.

has appreciated to $200 at the time the shares are transferred by gift or inheritance. If the recipient later sells the stock for $250 per share, will his gain be $50 or $150? If the transfer was by gift, §1015(a) of the Internal Revenue Code requires the donee to use his donor's cost "basis" of $100, so that the gain on the sale is $150 per share. But if the stock was received by inheritance, the beneficiary's "basis," prescribed by §1014(a) of the Internal Revenue Code, is the fair market value at the time of his transferor's death, or $200, so that the gain on the sale is only $50 per share. Thus appreciation in donated property will be charged against the donee, but appreciation in property held until death goes entirely untaxed.[32] The discrimination works against the tax advantages, mentioned above, that inter vivos gifts ordinarily enjoy over transfers at death. Moreover, the "stepped-up" basis that attaches to appreciated property transmitted at death undoubtedly reduces the liquidity of such assets when held by persons of advanced age.

More basic in the relationship between the transfer taxes and the income tax is the fact that property received by gift or inheritance is not treated as income to the transferee upon receipt. The exemption of gratuitous receipts (assuming it is not compelled by the Constitution)[33] has been defended on various grounds, principally because the transfer itself is subject to gift or inheritance tax, but also because the progressive nature of the income tax would levy a heavy toll on any property that was transferred in a single year rather than over a period of time. Neither objection inheres in the nature of things. The gift and estate taxes could be modified or abolished if it were better tax policy to treat gratuitous receipts as taxable income; and an "averaging" device could be employed to remedy the unfair "bunching" of income in a single year.[34] But abolition of the existing exemptions has never been seriously considered by Congress, despite vigorous advocacy of such action by at least one distinguished tax economist, the late Henry Simons.[35]

Somewhat more interest has been displayed in another proposal relating to gratuitous receipts, although it too is still far from Congressional action. This is the "accessions" tax, a scheme to replace the existing estate and gift taxes by a single tax imposed on the recipient of property by gift or inheritance.[36] The tax would be cumulative throughout the recipient's life, taxing each "accession" to his unearned wealth more heavily than the previous increment. No distinction would be made between gifts and inheritance or between property received from one benefactor and property received from several. The novel feature of the proposed tax is that it would focus attention on the recipient of wealth rather than on the transferor, treating all gratuitously acquired wealth as a unit. Thus, a taxpayer who received a total of $1 million partly by gift and partly by inheritance from various benefactors over a period of time would incur the same tax liability as one who received the same amount at one time from a single transferor. The accessions tax might be likened to an income tax levied only on gratuitous receipts, but with the lowest tax bracket each year starting where the highest

---

32 For President Kennedy's 1963 legislative proposals in this area, see page 486 supra.

33 Since these receipts have enjoyed a statutory exemption since the prototype of today's federal individual income tax was enacted in 1913, there has been no occasion for a judicial determination whether they constitute income within the meaning of the Sixteenth Amendment. But they were treated as income by the Revenue Act of 1894, the invalidation of which by Pollock v. Farmers' Loan & Trust Co., supra, page 5, led to the adoption of the Sixteenth Amendment.

bracket of the previous year ended. The "accessions" tax is an effort to achieve more completely the social aim of the gift and death taxes, not only by taxing more heavily a fortune that is transmitted intact than one that is split up, but also by taxing more heavily the transferee who already has received property from other transferors. The estate tax does neither, while the gift and inheritance taxes do only the first.

Other proposals for reforming the structure of transfer taxation are aimed at the fact that under existing law, the size of the tax on the transmission of a family fortune depends upon the number of transfers that occur, rather than on the number of generations separating the transferor from the transferee. Thus, if *A* gives property to *B*, his son, and *B* (after enjoying the income for a time) gives the same property to *C*, his son, two gift taxes must be paid. Only one would be due if the property were transferred directly by *A* to *C*. Similarly, if there were two transfers by will, both *A*'s estate and *B*'s would be subjected to estate tax;[37] but only one estate tax would be due if *A*'s will had granted a life interest to *B* and the remainder upon *B*'s death to *C*. And if *A* had been so unwise as to leave the property to his wife, who later transferred it to *B*, there would be still another tax (and yet another if *B* in turn had transmitted it to *his* wife), though some alleviation for interspousal transfers is afforded by the "marital deduction" introduced by the Revenue Act of 1948. That deduction aside, the total tax burden on a given family fortune is governed by the number of hands — rather than the number of generations — through which the property passes. In some cases the number of transfers is determined by accidents of birth and longevity, resulting in unequal tax burdens upon taxpayers whose economic circumstances may be comparable. In others, the number of transfers and therefore the total tax burden are determined by ingenuity in the use of life estates and other devices that may introduce undesirable rigidities into family settlements and that in any event are more feasible for the really rich than for others.

Several schemes have been devised to insure that the same burden will be imposed on the transfer of a given sum from one generation to another regardless of the number of steps in which this is accomplished. One of the most ingenious, although its complexity is forbidding, is the "bequeathing power succession tax" proposed by Professor William Vickrey.[38] His mechanism for making the tax independent of the number of transfers is to graduate it according to the difference in age between the transferor and transferee, so that the greater the gap the greater will be the tax. Two other remedies for the same evil, which depart much less radically from the present tax structure, are (1) to levy the existing estate tax on the life beneficiary (*B* in the example above) at the time of his death by including the property of which he is the life tenant in his estate, or (2) to levy a new auxiliary tax on the life tenant, based solely upon property of which he has enjoyed the income.[39]

This catalogue of possible reforms should not be closed without mention of the Rignano plan for increasing the rate of the inheritance tax with the number of transfers intervening between the present owner and the original creator of the wealth.[40] Thus *Z*'s property on his death would be segregated according to its

---

37 If, however, B's death occurred within ten years of A's, B's estate would be entitled to take a credit for part or all of the tax paid by A's estate, under the previously taxed property provision, §2013. See page 1330 infra.

40 Rignano, The Social Significance of the Inheritance Tax (1924).

origin and taxed accordingly: one tax rate on that part which Z had himself earned or saved: another and higher rate on that part inherited from X which X had himself earned or saved; a still higher rate on that part inherited from X which X in turn had inherited from its creator Y; and so on. By imposing a confiscatory rate after several transfers, Rignano's plan would permit a family fortune to continue only if each generation or two through its own efforts made substantial additions to the accumulation.

No doubt the reader has found this kaleidoscope of proposed reforms bewildering. Encountering them without a familiarity with the existing law, he may also have found the significance of some proposals a bit obscure. But even a casual acquaintance with possible improvements may help to illuminate his study of today's statutes; and alternatives should not be regarded as mere afterthoughts, but instead should be evaluated at many points in the study of what follows.

Selected Bibliography

History. In addition to the works by Ratner and Paul, listed *supra* page 28, see Shultz, The Taxation of Inheritance (1926); West, The Inheritance Tax (2d ed., 1908); Harriss, Gift Taxation in the United States (1940); Cahn (ed.), Social Meaning of Legal Concepts: No. 1, Inheritance of Property and the Power of Testamentary Disposition (1948).

Statistics. See the sources listed supra, page 28. So far as the extent of concentrated wealth is concerned, our knowledge is meager. The principal recent systematic studies are Lampman, The Share of Top Wealth-Holders in National Wealth, 1920-1956 (1962), which cites at pages 8-12 the earlier studies; and Goldsmith, The National Wealth of the United States in the Postwar Period (1962). See also Bowen, Some Yield Estimates for Transfer Taxes, 12 Nat. Tax J. 54 (1959); Temporary National Economic Committee, Monographs No. 4 (Concentration and Composition of Individual Incomes, 1918-1937) and No. 29 (The Distribution of Ownership in the 200 Largest Nonfinancial Corporations); Powell and Looker, Decedents' Estates, 30 Col. L. Rev. 919 (1930); Crum, The Distribution of Wealth (Harvard Business School Research Studies No. 31) (1935); Doane, The Anatomy of American Wealth (1940); Ward and Beuscher, The Inheritance Process in Wisconsin, [1950] Wisc. L. Rev. 393, 399; Butters, Thompson, and Bollinger, Effects of Taxation: Investments by Individuals (1953); Harriss, Wealth Estimates as Affected by Audit of Estate Tax Returns, 3 Nat. Tax J. 316 (1949). The best-known popular works, which are both unsystematic and fragmentary, are: Myers, History of the Great American Fortunes (Modern Library ed., 1936) and his The Ending of Hereditary American Fortunes (1939); see also Tebbel, The Inheritors (1962).

Theory and Philosophy. An excellent brief account of the theory of inheritance taxation is Shultz's article, Inheritance Taxation, in the Encyclopedia of the Social Sciences. In addition to the works cited in the previous paragraph, consult Seligman, The Inheritance Tax, in his Essays in Taxation (9th ed., 1921), an influential essay by a pioneer authority on American public finance; Wedgewood, The Economics of Inheritance (Pelican ed., 1939) 199-216; Dalton, The Inequality of Incomes (1920) 281-345; and Rignano, The Social Significance of the Inheritance Tax (1924); Eisenstein, The Rise and Decline of the Estate Tax, 11 Tax L. Rev. 223 (1956).

Incidence and Effects. There is a brief summary of the arguments on the incidence and effects of death taxes in Groves, Postwar Taxation and Economic Progress (1946) 243-250. See also Committee on Postwar Tax Policy, A Tax Program for a Solvent America (1945) 155-169; Wedgewood, The Economics of Inheritance (Pelican ed., 1939) 225-239; Dalton, Public Finance (3d ed., 1936) 114-118; Pigou, A Study in Public Finance (3d ed., 1949) 138-146; von Mering, The Shifting and Incidence of Taxation (1942) 216-223; Hicks, Public Finance (1947) 231-248; Stamp, The Fundamental Principles of Taxation (1936) 143-153; Phillips, Social Control Through Taxation of Estates and Trusts, 23 Cornell L. Q. 113 (1937); Woolfson, Inheritance Taxation and Maladjustment of National Income, 15 Taxes 458 (1937); Harriss, Sources of Injustice in Death Taxation, 7 Nat. Tax J. 289 (1954); Looker, The Impact of Estate and Gift Taxes on Property Disposition, 38

Calif. L. Rev. 44 (1950); Harriss, Economic Effects of Estate and Gift Taxation, in Federal Tax Policy for Economic Growth and Stability (Joint Committee on the Economic Report, 84th Cong., 1st Sess., 1955) page 855; Bosland, Has Estate Taxation Induced Recent Mergers? 16 Nat. Tax J. 159 (1963).

Legal. Although legal articles and treatises are cited at appropriate points in the text, a few should receive special mention here. For a comprehensive account of federal estate and gift taxation, see Lowndes and Kramer, Federal Estate and Gift Taxes (2d ed., 1962), and Paul, Federal Estate and Gift Taxation (1942, with 1946 Supplement), which is outdated at points but still useful. Briefer studies are Lewis, The Estate Tax (1960), and Craven, The Gift Tax (1963), both published by the Practising Law Institute in the series, Fundamentals of Federal Taxation, and revised periodically. An incisive account of the judicial history of the federal estate tax is Eisenstein's, Estate Taxes and the Higher Learning of the Supreme Court, 3 Tax L. Rev. 395 (1948). See also American Law Institute, Federal Income, Estate and Gift Tax Statute (Tentative Draft No. 11, 1956); Symposium, A Critique of Federal Estate and Gift Taxation, 38 Calif. L. Rev. 1 (1950).

On estate planning, see Casner, Estate Planning (3d ed. 1961, with supplement); Trachtman, Estate Planning (Practising Law Institute, 1964); Estate Planning, 1963 U. of Ill. L.F. 123.

CHAPTER 11

Federal Gift Taxation: Introductory

The materials in this chapter are no more than an introduction to the federal gift tax, sketching as they do only an outline of the tax's coverage. The details have been postponed until later chapters in order to compare the competing claims of the gift tax and the estate tax in specific situations.

SECTION A. CONSTITUTIONALITY

BROMLEY v. McCAUGHN

280 U.S. 124 (1929)

MR. JUSTICE STONE delivered the opinion of the Court. . . .

Bromley, a resident of the United States, brought the present suit in the District Court for Eastern Pennsylvania, to recover a tax alleged to have been illegally exacted, upon gifts made by him after the effective date of §319 of the Revenue Act of 1924. This section imposes a graduated tax "upon the transfer by a resident by gift" during the calendar year "of any property wherever situated. . . ." In computing the amount of the gift subject to the tax, §321, in the case of a resident, exempts gifts aggregating $50,000, gifts to any one person which do not exceed $500, and certain gifts for religious, charitable, educational, scientific and like purposes. The questions certified [by the Court of Appeals for the Third Circuit] are:

1. Are the provisions of Sections 319-324 of the Revenue Act of 1924, as amended by Section 324 of the Revenue Act of 1926, when applied to transfers of property by gift inter vivos, made after the effective dates of the cited Revenue Acts and not made in contemplation of death, invalid, because they violate (a) the third clause of Section 2 and (b) the fourth clause of Section 9 of Article 1 of the Constitution in that the tax they impose is a direct tax and has not been apportioned?

2. Are the cited provisions, when applied to transfers of property made in like circumstances, invalid because they violate (a) the Fifth Amendment of the Constitution and (b) the first clause of Section 8 of Article 1 of the Constitution in that they impose a tax which is graduated and subject to exemptions and therefore lacks uniformity, and also deprive a person of his property without due process of law?

1. The first question was mooted by counsel, but not decided, in Blodgett v. Holden, 275 U.S. 142, and Untermeyer v. Anderson, 276 U.S. 440. The general power to "lay and collect taxes, duties, imposts and excises" conferred by Article I, §8 of the Constitution, and required by that section to be uniform throughout the United States, is limited by §2 of the same article, which requires "direct" taxes to be apportioned, and §9, which provides that "no capitation or other direct tax shall be laid unless in proportion to the census" directed by the Constitution to be taken. As the present tax is not apportioned, it is forbidden if direct.

The meaning of the phrase "direct taxes" and the historical background of the

Constitutional requirement for their apportionment have been so often and exhaustively considered by this Court . . . that no useful purpose would be served by renewing the discussion here.* Whatever may be the precise line which sets off direct taxes from others, we need not now determine. While taxes levied upon or collected from persons because of their general ownership of property may be taken to be direct, Pollock v. Farmers Loan & Trust Company, 157 U.S. 429, 158 U.S. 601, this Court has consistently held, almost from the foundation of the government, that a tax imposed upon a particular use of property or the exercise of a single power over property incidental to ownership, is an excise which need not be apportioned, and it is enough for present purposes that this tax is of the latter class. . . .

It is a tax laid only upon the exercise of a single one of those powers incident to ownership, the power to give the property owned to another. Under this statute all the other rights and powers which collectively constitute property or ownership may be fully enjoyed free of the tax. So far as the constitional power to tax is concerned, it would be difficult to state any intelligible distinction, founded either in reason or upon practical considerations of weight, between a tax upon the exercise of the power to give property inter vivos and the disposition of it by legacy, upheld in Knowlton v. Moore [178 U.S. 41], the succession tax in Scholey v. Rew, 23 Wall. 331, the tax upon the manufacture and sale of colored oleomargarine in McCray v. United States, 195 U.S. 27, the tax upon sales of grain upon an exchange in Nicol v. Ames [173 U.S. 509], the tax upon sales of shares of stock in Thomas v. United States, 192 U.S. 363, the tax upon the foreign built yachts in Billings v. United States, 232 U.S. 261, the tax upon the use of carriages in Hylton v. United States [3 Dall. 171]; compare Veazie Bank v. Fenno, 8 Wall. 533, 545, Thomas v. United States, supra, 370.

It is true that in each of these cases the tax was imposed upon the exercise of one of the numerous rights of property, but each is clearly distinguishable from a tax which falls upon the owner merely because he is owner, regardless of the use or disposition made of his property. See Billings v. United States, supra; cf. Pierce v. United States, 232 U.S. 290. The persistence of this distinction and the justification for it rest upon the historic fact that taxes of this type were not understood to be direct taxes when the Constitution was adopted and, as well, upon the reluctance of this Court to enlarge by construction, limitations upon the sovereign power of taxation by Art. I, §8, so vital to the maintenance of the National Government. Nicol v. Ames, supra, 514, 515.

It is said that since property is the sum of all the rights and powers incident to ownership, if an unapportioned tax on the exercise of any of them is upheld, the distinction between direct and other classes of taxes may be wiped out, since the property itself may likewise be taxed by resort to the expedient of levying numerous taxes upon its uses; that one of the uses of property is to keep it, and that a tax upon the possession or keeping of property is no different from a tax on the property itself. Even if we assume that a tax levied upon all the uses to which property may be put, or upon the exercise of a single power indispensable to the enjoyment of all others over it, would be in effect a tax upon the property, see Dawson v. Kentucky Distilleries & Warehouse Co., 255 U.S. 288, and hence a direct tax requiring apportionment, that is not the case before us.

The power to give cannot be said to be a more important incident of property than the power to use, the exercise of which was taxed in Billings v. United States, and even though differences in degree may be carried to a point where they produce distinctions in kind, the present levy falls so far short of taxing generally the

---

* Supra pages 5-7. — Ed.

uses of property that it cannot be likened to the taxes on property itself which have been recognized as direct. It falls, rather, into that category of imposts or excises which, since they apply only to a limited exercise of property rights, have been deemed to be indirect and so valid although not apportioned.

2. The uniformity of taxation throughout the United States enjoined by Art. I, §8, is geographic, not intrinsic. A graduated tax on legacies, granting exemptions, Knowlton v. Moore, supra, or on incomes, Brushaber v. Union Pacific R. Co., 240 U.S. 1, does not violate this clause of the Constitution, nor are such taxes infringements on the Fifth Amendment. Knowlton v. Moore, supra, page 109; Brushaber v. Union Pac. R. Co., supra, pages 24, 25. Graduated taxes on inheritances or successions, with provisions for exemptions, have so often been upheld as not violating either the due process or the equal protection clauses of the Fourteenth Amendment, Stebbins v. Riley, 268 U.S. 137, as to leave little ground for supposing that taxation by Congress embracing these features, and otherwise valid, could be deemed a denial of the due process clause of the Fifth. See Van Oster v. Kansas, 272 U.S. 465, 468.

It is suggested that the schemes of graduation and exemption in the present statute, by which the tax levied upon donors of the same total amounts may be affected by the size of the gifts to individual donees, are so arbitrary and unreasonable as to deprive the taxpayer of property without due process. But similar features of state death taxes have been held not to infringe the Fourteenth Amendment since they bear such a relation to the subject of the tax as not "to preclude the assumption that the legislature, in enacting the statute, did not act arbitrarily or without the exercise of judgment and discretion which rightfully belong to it." Stebbins v. Riley, supra, p. 145. No more can they be a basis for holding that the graduation and exemption features of the present statute violate the Fifth Amendment.

The answer to both questions is, No.

Opinion of MR. JUSTICE SUTHERLAND, dissenting, delivered by MR. JUSTICE BUTLER.

In the convention which framed the Constitution, Mr. King on one occasion asked what was the precise meaning of "direct taxation," and Mr. Madison informs us that no one answered. That Mr. Madison took the pains to record the incident indicates that it challenged attention but that no one was able to formulate a definition. And though we understand generally what is a direct tax and what taxes have been declared to be direct, we are still as incapable of formulating an exact definition as were those who wrote the taxation clauses into the Constitution. Since the *Pollock* case, however, we know that a tax on property, whether real or personal, or upon the income derived therefrom, is direct; and that to levy a tax by reason of ownership of property is to tax the property. Dawson v. Kentucky Distilleries Co., 255 U.S. 288, 294.

The right to give away one's property is as fundamental as the right to sell it or, indeed, to possess it. To give away property is not to exercise a separate element or incident of ownership, like the use of a carriage, but completely to sever the donor's relation to the property and leave in him no element or incident of ownership whatsoever. Reasonably it cannot be doubted that the power to dispose of property according to the will of the owner is a property right. If a tax upon the sale of property, irrespective of special circumstances, is a direct tax, it is clear that a tax upon the gift of property, irrespective of special circumstances, is, likewise, direct. In my opinion, both are direct because they are in substance and effect not excise taxes but taxes upon property. By repeated decisions of this Court it has become axiomatic that it is the substance and not the form that controls in such matters. . . .

To me it seems plain that a tax imposed upon an ordinary gift, to be measured by the value of the property given and without regard to any qualifying circumstances, is a tax by indirection upon the property, as much for example, as a tax upon the mere possession by the owner of a farm, measured by the value of the land possessed, would be a tax on the land. To call either of them an excise is to sacrifice substance to a mere form of words. I think, therefore, the first question certified, without stopping to consider the second, should be answered in the affirmative.

MR. JUSTICE VAN DEVANTER and MR. JUSTICE BUTLER concur in this opinion.

NOTE

1. *Retroactivity.* The gifts in Bromley v. McCaughn were made after enactment of the Revenue Act of 1924. In Blodgett v. Holden, 275 U.S. 142 (1927), the Court was concerned with gifts made in the early part of 1924, before the Revenue Act of 1924 was under Congressional consideration; four justices interpreted the statute to apply to the gifts and expressed the view that its retroactive application violated the Fifth Amendment, while four others construed the statute as not intended to reach the gifts in dispute. In Untermyer v. Anderson, 276 U.S. 440 (1928), involving a gift made while the bill that became the Revenue Act of 1924 was in conference, a majority of the Court accepted the view expressed in Blodgett v. Holden by the four justices who found that Congress intended to tax the gift and that as applied the statute was unconstitutional. Three justices dissented, citing cases in which the federal income tax was held to be constitutionally valid as applied to income earned during the early part of the year of enactment. For more on retroactivity, see Sidney v. Commissioner, 273 F.2d 928 (2d Cir. 1960).

2. *History.* The gift tax provisions of the Revenue Act of 1924 were repealed as of January 1, 1926. A gift tax was reimposed in 1932, however, but with an important new feature distinguishing it from its predecessor: the 1932 tax, which is still in force, is cumulative in the sense that the tax on gifts made in the current year is graduated by reference to the aggregate of the donor's gifts in prior years. An echo of the retroactivity problem discussed in the preceding paragraph is to be found in §2502(b), under which a gift is taken into account only if made after June 6, 1932, when the Revenue Act of 1932 was enacted.

The 1932 tax took account of a transfer only to the extent that the donor's gifts to the donee in question exceeded $5000 in the calendar year; thus, if a donor transferred $7000 to each of 3 donees in a given calendar year, he was entitled to a $5000 exclusion for each donee, so that his "gifts" for tax purposes amounted to only $2000 per donee, or a total of $6000. The per-donee exclusion is available anew every year, and there is no limit on the number of qualifying donees. The amount of the exclusion (which is not allowed if the gift consists of a future interest in property) was reduced to $4000 for the years 1939-1942 and to $3000 for subsequent years.

In addition to the $3000 annual per-donee exclusion, the donor is allowed a lifetime exemption of $30,000 by §2521; thus, if a taxpayer gives $8000 per year to each of 5 donees in 1964, 1965, and 1966, the "total amount of gifts" under §2503(b) is $25,000 for each year; and if he has not previously used any of his lifetime exemption of $30,000 and elects to use it in 1964-1965, his "taxable gifts" under §2503(a) are zero in 1964, $20,000 in 1965, and $25,000 in 1966. In the case of a married couple, the $3000 per-donee exclusion and the $30,000 lifetime exemption are in effect doubled if they elect to employ the "split gift" privilege of §2513(a). For more on the computation of the tax, see page 1070 infra.

3. *Types of property subject to tax.* Section 2501(a) provides that the gift tax applies to transfers of "property," and §2511(a) states that it does not matter whether "the property is real or personal, tangible or intangible." This language embraces so-called "tax-exempt" state and municipal bonds, Regs. §25.2511-1(a), and the tax, being an excise on their transfer, is not unconstitutional, Willcuts v. Bunn, 282 U.S. 216, 230 (1931). In Phipps v. Commissioner, 91 F.2d 627 (10th Cir. 1937), cert. denied, 302 U.S. 742 (1937), moreover, it was held that a transfer of federal bonds issued under a statute providing

that they were "exempt, both as to principal and interest, from all [federal, state, or local] taxation, except estate or inheritance taxes" was subject to gift tax.

The tax is less sweeping, however, if the donor is a nonresident alien (including certain citizens who are residents of a U.S. possession and meet the test of §2501(c)). For such persons, a gift is taxable only if the property "is situated within the United States," and, in the case of corporate stock, only if the issuer is a domestic corporation. §2511(a) and (b). (Regulations §25.2511-3(b)(2) interprets §2511(b) to mean that domestic stock has a U.S. situs regardless of the physical location of the certificates.) If the nonresident alien donor is not engaged in business within the United States, moreover, §2501(a) exempts transfers of all intangible property.

The territorial reach of the federal gift tax is also affected by bilateral tax conventions with Australia and Japan.

4. *Tax imposed on "individuals."* Section 2501(a) imposes the gift tax on the gift of property "by any individual." What of gifts by a corporation? The Regulations state that a transfer of property by a corporation is a gift pro tanto by the stockholders, §25.2511-1(g)(1), which accords with the views of the committees of Congress that recommended the enactment of the present gift tax. H.R. Rept. No. 708 and S. Rept. No. 665, 72d Cong., 1st Sess., reprinted, 1939-1 C.B. (Part 2) 476, 524. What if a stockholder objects to the gift?

As to transfers by trustees, see Regs. §25.2511-1(g).

5. *Relation of gift tax to estate tax.* As will be seen, property transferred during the donor's lifetime is sometimes includible in his gross estate in computing the federal estate tax on his death, even though the transfer was subject to a gift tax when made; a common example of this overlap between the two taxes is a gift in contemplation of death (infra p. 1136). In such cases, the gift tax is ordinarily credited against the estate's federal estate tax liability as though it were a "down payment," but the credit (infra p. 1330) is not necessarily equal to the full amount of gift tax paid.

6. *Relation of gift tax to income tax.* For the donee's "basis" in computing his gain or loss for income tax purposes on a sale or other disposition of property received by gift, including an adjustment in some instances to reflect the gift tax paid on the transfer, see page 102 supra.

Section B. Revocable and Other Incomplete Transfers

BURNET v. GUGGENHEIM

288 U.S. 280 (1933)

Mr. Justice Cardozo delivered the opinion of the Court.

The question to be decided is whether deeds of trust made in 1917, with a reservation to the grantor of a power of revocation, became taxable as gifts under the Revenue Act of 1924 when in 1925 there was a change of the deeds by the cancellation of the power.

On June 28, 1917, the respondent, a resident of New York, executed in New Jersey two deeds of trust, one for the benefit of his son, and one for the benefit of his daughter. The trusts were to continue for ten years, during which period part of the income was to be paid to the beneficiary and part accumulated. At the end of the ten year period the principal and the accumulated income were to go to the beneficiary, if living; if not living, then to his or her children; and if no children survived, then to the settlor in the case of the son's trust, and in the case of the daughter's trust to the trustees of the son's trust as an increment to the fund. The settlor reserved to himself broad powers of control in respect of the trust property and its investment and administration. In particular, there

was an unrestricted power to modify, alter or revoke the trusts except as to income, received or accrued. The power of investment and administration was transferred by the settlor from himself to others in May, 1921. The power to modify, alter or revoke was eliminated from the deeds, and thereby canceled and surrendered, in July, 1925.

In the meanwhile Congress had passed the Revenue Act of 1924 which included among its provisions a tax upon gifts. "For the calendar year 1924 and each calendar year thereafter . . . a tax . . . is hereby imposed upon the transfer by a resident by gift during such calendar year of any property wherever situated, whether made directly or indirectly," the tax to be assessed in accordance with a schedule of percentages upon the value of the property.

At the date of the cancellation of the power of revocation, the value of the securities constituting the corpus of the two trusts was nearly $13,000,000. Upon this value the Commissioner assessed against the donor a tax of $2,465,681, which the Board of Tax Appeals confirmed with a slight modification due to a mistake in computation. The taxpayer appealed to the Court of Appeals for the second circuit, which reversed the decision of the Board and held the gift exempt. 58 F.(2d) 188. The case is here on certiorari.

On November 8, 1924, more than eight months before the cancellation of the power of revocation, the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, adopted and promulgated the following regulation:

> The creation of a trust, where the grantor retains the power to revest in himself title to the corpus of the trust, does not constitute a gift subject to tax, but the annual income of the trust which is paid over to the beneficiaries shall be treated as a taxable gift for the year in which so paid. Where the power retained by the grantor to revest in himself title to the corpus is not exercised, a taxable transfer will be treated as taking place in the year in which such power is terminated.

The substance of this regulation has now been carried forward into [§501(c) of] the Revenue Act of 1932. . . .

We think the regulation, and the later statute continuing it, are declaratory of the law which Congress meant to establish in 1924.

"Taxation is not so much concerned with the refinements of title as it is with the actual command over the property taxed — the actual benefit for which the tax is paid." Corliss v. Bowers, 281 U.S. 376, 378. . . . While the powers of revocation stood uncanceled in the deeds, the gifts, from the point of view of substance, were inchoate and imperfect. By concession there would have been no gift in any aspect if the donor had attempted to attain the same result by the mere delivery of the securities into the hands of the donees. A power of revocation accompanying delivery would have made the gift a nullity. Basket v. Hassell, 107 U.S. 602. By the execution of deeds and the creation of trusts, the settlor did indeed succeed in divesting himself of title and transferring it to others . . . but the substance of his dominion was the same as if these forms had been omitted. Corliss v. Bowers, supra. He was free at any moment, with reason or without, to revest title in himself, except as to any income then collected or accrued. As to the principal of the trusts and as to income to accrue thereafter, the gifts were formal and unreal. They acquired substance and reality for the first time in July, 1925, when the deeds became absolute through the cancellation of the power.

The argument for the respondent is that Congress in laying a tax upon transfers by gift made in 1924 or in any year thereafter had in mind the passing of title, not the extinguishment of dominion. In that view the transfer had been

made in 1917 when the deeds of trust were executed. The argument for the Government is that what was done in 1917 was preliminary and tentative, and that not till 1925 was there a transfer in the sense that must have been present in the mind of Congress when laying a burden upon gifts. Petitioner and respondent are at one in the view that from the extinguishment of the power there came about a change of legal rights and a shifting of economic benefits which Congress was at liberty, under the Constitution, to tax as a transfer effected at that time. . . . The question is not one of legislative power. It is one of legislative intention.

With the controversy thus narrowed, doubt is narrowed too. Congress did not mean that the tax should be paid twice, or partly at one time and partly at another. If a revocable deed of trust is a present transfer by gift, there is not another transfer when the power is extinguished. If there is not a present transfer upon the delivery of the revocable deed, then there is such a transfer upon the extinguishment of the power. There must be a choice, and a consistent choice, between the one date and the other. To arrive at a decision, we have therefore to put to ourselves the question, which choice is it the more likely the Congress would have made? Let us suppose a revocable transfer made on June 3, 1924, the day after the adoption of the Revenue Act of that year. Let us suppose a power of revocation still uncanceled, or extinguished years afterwards, say in 1931. Did Congress have in view the present payment of a tax upon the full value of the subject matter of this imperfect and inchoate gift? The statute provides that upon a transfer by gift the tax upon the value shall be paid by the donor and shall constitute a lien upon the property transferred. By the act now in force, the personal liability for payment extends to the donee.* A statute will be construed in such a way as to avoid unnecessary hardship when its meaning is uncertain. Hawaii v. Mankichi, 190 U.S. 197, 214; Sorrels v. United States, 287 U.S. 435. Hardship there plainly is in exacting the immediate payment of a tax upon the value of the principal when nothing has been done to give assurance that any part of the principal will ever go to the donee. The statute is not aimed at every transfer of the legal title without consideration. Such a transfer there would be if the trustees were to hold for the use of the grantor. It is aimed at transfers of the title that have the quality of a gift, and a gift is not consummate until put beyond recall.

The respondent invokes the rule that in the construction of a taxing act doubt is to be resolved in favor of the taxpayer. United States v. Merriam, 263 U.S. 179; Gould v. Gould, 245 U.S. 151. There are many facets to such a maxim. One must view them all, if one would apply it wisely. The construction that is liberal to one taxpayer may be illiberal to others. One must strike a balance of advantage. It happens that the taxpayer before us made his deeds in 1917, before a transfer by gift was subject to a tax. We shall alleviate his burden if we say that the gift was then complete. On the other hand, we shall be heightening the burdens of taxpayers who made deeds of gift after the Act of 1924. In making them, they had the assurance of a treasury regulation that the tax would not be laid, while the power of revocation was uncanceled, except upon the income paid from year to year. They had good reason to suppose that the tax upon the principal would not be due until the power was extinguished or until the principal was paid. If we disappoint their expectations, we shall be illiberal to them.

The tax upon gifts is closely related both in structure and in purpose to the tax upon those transfers that take effect at death. What is paid upon the one

---

* The corresponding provisions of the 1954 Code are §2502(d) (donor to pay tax) and §6324(b) (gift tax lien; donee personally liable to the extent of the value of the gift). — Ed.

is in certain circumstances a credit to be applied in reduction of what will be due upon the other.* The gift tax is Part II of Title III of the Revenue Act of 1924; the Estate Tax is Part I of the same title. The two statutes are plainly in pari materia. There has been a steady widening of the concept of a transfer for the purpose of taxation under the provisions of Part I. . . . There is little likelihood that the lawmakers meant to narrow the concept, and to revert to a construction that would exalt the form above the substance, in fixing the scope of a transfer for the purposes of Part II. We do not ignore differences in precision of definition between the one part and the other. They cannot obscure identities more fundamental and important. The tax upon estates, as it stood in 1924, was the outcome of a long process of evolution; it had been refined and perfected by decisions and amendments almost without number. The tax on gifts was something new. Even so, the concept of a transfer, so painfully developed in respect of taxes on estates, was not flung aside and scouted in laying this new burden upon transfers during life. Congress was aware that what was of the essence of a transfer had come to be identified more nearly with a change of economic benefits than with technicalities of title. The word had gained a new color, the result, no doubt in part, of repeated changes of the statutes, but a new color none the less. . . .

The respondent finds comfort in the provisions of §302(d) of the Act of 1924 [providing that in computing the federal estate tax there shall be included in the gross estate the corpus of any trust created by the decedent during his lifetime "where the enjoyment thereof was subject at the date of his death to any change through the exercise of a power, either by the decedent alone or in conjunction with any person, to alter, amend, or revoke, or where the decedent relinquished any such power in contemplation of his death, except in case of a bona fide sale for a fair consideration in money or money's worth," a provision which was applicable to trusts whether created before or after the enactment of the 1924 Act]. He asks why such a provision should have been placed in Part I [estate tax] and nothing equivalent inserted in Part II [gift tax], if powers for purposes of the one tax were to be treated in the same way as powers for the purposes of the other. Section 302(d) of the Act of 1924 is in part a reënactment of a section of the Revenue Acts of 1918 and 1921, though it has been changed in particulars. . . . It is an outcome of that process of development which has given us a rule for almost every imaginable contingency in the assessment of a tax under the provisions of Part I. No doubt the draftsman of the statute would have done well if he had been equally explicit in the drafting of Part II. This is not to say that meaning has been lost because extraordinary foresight would have served to make it clearer. Here as so often there is a choice between uncertainties. We must be content to choose the lesser. To lay the tax at once, while the deed is subject to the power, is to lay it on a gift that may never become consummate in any real or beneficial sense. To lay it later on is to unite benefit with burden. We think the voice of Congress has ordained that this be done. . . .

The argument for the respondent, if pressed to the limit of its logic would carry him even farther than he had claimed the right to go. If his position is sound that a power to revoke does not postpone for the purpose of taxation the consummation of the gift, then the income of these trusts is exempt from the tax as fully as the principal. What passed to the beneficiaries was the same in either case, an interest inchoate and contingent till rendered absolute and consummate through receipt or accrual before the act of revocation. Congress did not mean

* See §2012 (credit for federal gift tax paid on property included in gross estate), infra page 1330. — Ed.

that recurring instalments of the income, payable under a revocable conveyance which had been made by a settlor before the passage of this statute, should be exempt, when collected, from the burden of the tax.

The judgment is reversed.

THE CHIEF JUSTICE took no part in the consideration or decision of this case.

MR. JUSTICE SUTHERLAND and MR. JUSTICE BUTLER are of opinion that the termination of the donor's power of revocation was not a transfer by gift of any property within the meaning of the statute, and that the judgment of the Circuit Court of Appeals should be affirmed.

NOTE

1. *Repeal of §501(c), 1932 Act.* Because the Supreme Court in the *Guggenheim* case expressed the opinion that §501(c) of the 1932 Revenue Act (providing that a revocable transfer is not a taxable gift) was declaratory only, it was repealed in 1934.

2. *Transfers revocable because of transferor's incompetence, etc.* A gift may be subject to recall because the donor was non compos mentis, because he failed to make an effective delivery of the property or to comply with laws like the statute of frauds, because the transfer was procured by fraud, and so on. Is there a taxable gift if there is no time limit on the power of the donor to recover the donated property? If the transfer has not been nullified at the time of the donor's death, the property may be part of his gross estate and become subject to the federal estate tax. See page 1082 infra.

In Commissioner v. Allen, 108 F.2d 961, cert. denied, 309 U.S. 680 (1940), the court had to decide the proper time for imposing the gift tax on a transfer made by the taxpayer while he was a minor. The applicable local law allowed a minor to recover property transferred by gift at any time before reaching the age of 21 and for a "reasonable time" (depending "on the circumstances of the particular case") thereafter. The transfer occurred in 1932, before the gift tax law was enacted; the government assessed a deficiency for 1933, when the taxpayer became 21. The court rejected the taxpayer's argument that the gift was made in 1932 and upheld the assessment for 1933. But there was no contention that the gift occurred in a *later* year:

> The respondent [taxpayer] suggests that a ruling, that a minor's transfer in trust does not become taxable until the minor attains majority and fails to disaffirm, will lead to difficulties in administration with respect to the date of taxability of a transfer in view of the varying periods allowed minors for disaffirmance after majority. No such difficulty arises from the record in this case. The respondent objected neither to the Commissioner's determination of the date the transfer became complete as a gift nor to the valuation placed upon the securities embraced by the transfer. Moreover, the period of the New Jersey statute of limitations, the utter conceivable limit of the respondent's right to disaffirm, expired on October 9, 1939, without an effort at disaffirmance on her part. In any event, for the Commissioner to promulgate a regulation with respect to a minor's transfer in trust that will fully protect the minor's free exercise of his right to disaffirm after majority should not present insuperable difficulty. [108 F.2d at 966.]

No regulation of this type has been issued.

See also Richardson v. Commissioner, 126 F.2d 562 (2d Cir. 1942) (taxpayer took certain steps to transfer stock to his wife as a gift before gift tax law was enacted, but did not deliver certificates to her until after law's enactment; held, preliminary steps did not constitute gift, because certificates and certain other documents remained in possession of taxpayer's agent and taxpayer's action was revocable). Does state or federal law govern the effectiveness of the ceremonial conduct (delivery, etc.) evidencing the completion of a gift? In the *Richardson* case, the court (per Judge Jerome N. Frank) said that "we are not here compelled by Erie R. Co. v. Tompkins, 304 U.S. 64, to play the role of ventriloquist's dummy to the courts of some particular state; as we understand it, 'federal law,' not 'local law,' is applicable." But what is the source of federal law on whether there has been an adequate delivery or other transfer of property?

3. *Transfers conditioned on non-taxability.* In Commissioner v. Procter, 142 F.2d 824 (4th Cir. 1944), the court had to pass on the effect of a transfer of property under which title was to revert to the donor should the transfer be determined to be subject to federal gift tax:

> The third point is based upon the following provision of the trust indenture making the gift, viz.:
>
> "Eleventh: The settlor is advised by counsel and satisfied that the present transfer is not subject to Federal gift tax. However, in the event it should be determined by final judgment or order of a competent federal court of last resort that any part of the transfer in trust hereunder is subjected to gift tax, it is agreed by all the parties hereto that in that event the excess property hereby transferred which is decreed by such court to be subject to gift tax, shall automatically be deemed not to be included in the conveyance in trust hereunder and shall remain the sole property of Frederic W. Procter free from the trust hereby created."
>
> We do not think that the gift tax can be avoided by any such device as this. Taxpayer has made a present gift of a future interest in property. He attempts to provide that, if a federal court of last resort shall hold the gift subject to gift tax, it shall be void as to such part of the property given as is subject to the tax. This is clearly a condition subsequent and void because contrary to public policy. A contrary holding would mean that upon a decision that the gift was subject to tax, the court making such decision must hold it not a gift and therefore not subject to tax. Such holding, however, being made in a tax suit to which the donees of the property are not parties, would not be binding upon them and they might later enforce the gift notwithstanding the decision of the Tax Court. It is manifest that a condition which involves this sort of trifling with the judicial process cannot be sustained.
>
> The condition is contrary to public policy for three reasons: In the first place, it has a tendency to discourage the collection of the tax by the public officials charged with its collection, since the only effect of an attempt to enforce the tax would be to defeat the gift. In the second place, the effect of the condition would be to obstruct the administration of justice by requiring the courts to pass upon a moot case. If the condition were valid and the gift were held subject to tax, the only effect of the holding would be to defeat the gift so that it would not be subject to tax. The donor would thus secure the opinion of the court as to the taxability of the gift, when there would be before the court no controversy whatever with the taxing authorities which the court could decide, the only possible controversy being as to the validity of the gift and being between the donor and persons not before the court. . . .
>
> In the third place the condition is to the effect that the final judgment of a court is to be held for naught because of the provision of an indenture necessarily before the court when the judgment is rendered. It should be remembered that it is not possible to obtain a declaratory judgment from a federal court as to whether the gift in question is subject to the gift tax.* The only way, therefore, in which it could be determined by "final judgment" of a federal court of last resort that any part of a transfer was subject to a gift tax would be for a tax to be assessed by the Commissioner and upheld by such court in the course of legal proceedings instituted for its enforcement or for its recovery after payment. This final judgment would fix the liability of the donor for the tax; and only then could the condition become operative. The condition, however, could not be given the effect of invalidating a judgment which had been rendered when the instrument containing the condition was before the court, since all matters are merged in the judgment. To state the matter differently, the condition is not to become operative until there has been a judgment; but after the judgment has been rendered it cannot become operative because the matter involved is concluded by the judgment. [142 F.2d at 827.]

Harrison v. Commissioner, 17 T.C. 1350 (1952), involved a gift in trust under which the trustee was to pay out of the corpus any gift tax levied on the transfer. The Court held:

* Supra page 927. — Ed.

One of the essential elements of a gift is the donor's intent to make the gift. Petitioner did not intend that the amount of the value of the property necessary for the gift tax liability would be a gift to the trust. Therefore, in the absence of an intent to give, this amount was not effective as property passing from the donor, and not taxable as a gift. [17 T.C. at 1357.]

HOLTZ'S ESTATE v. COMMISSIONER
38 T.C. 37 (1962)

DRENNAN, Judge: . . .

The principal issue for decision is whether taxable gifts resulted from transfers to a trust established by [Leon Holtz, the decedent] by deed of trust dated June 12, 1953, wherein Leon was the settlor and Land Title Bank and Trust Company, now Provident Tradesmens Bank and Trust Company, was the sole trustee. The trust instrument provided that the trustee should distribute the net income therefrom and the principal thereof as follows. During the lifetime of settlor the income should be paid to him, and as much of the principal as the trustee "may from time to time think desirable for the welfare, comfort and support of Settlor, or for his hospitalization or other emergency needs," should be paid to him or for his benefit. Upon the death of the settlor, if his wife survived him, the income of the trust was to be paid to her during her lifetime, and a similar provision was made for invasion of principal for her benefit during her lifetime. The trust was to terminate at the death of the survivor of settlor and his wife and the "then-remaining principal" was payable to the estate of the survivor.

On June 12, 1953, Leon transferred property having a value of $384,117 to the trust, and on January 18, 1955, he transferred an additional $50,000 in cash to the trust. Respondent determined that, as a result of these transfers, Leon made taxable gifts in 1953 in the amount of $263,277.63, and in 1955 in the amount of $35,570, computing the value of the taxable gifts by reducing the value of the property transferred in each instance by the actuarial value of Leon's life estate and reversionary interest in each transfer. Petitioner claims the transfers were not completed gifts and that no part of the value thereof was subject to gift tax.

At the trial of this proceeding respondent moved that the testimony of the trustee's agent concerning the circumstances surrounding the creation and execution of the trust be stricken from the record on the ground that the written trust instrument contained the entire agreement of the parties and that any parol evidence which varied, explained, or otherwise colored the terms of the instrument was inadmissible under the parol evidence rule. The motion was taken under advisement at the conclusion of the trial and the parties were asked to argue the motion on brief. Respondent did not mention his motion on brief and we assume he has abandoned it. However, it is well established in this Court that the parol evidence rule cannot be invoked by a third party, not a party to the written instrument involved, Haverty Realty & Investment Co., 3 T.C. 161 (1944), and cases cited therein; Sarah Helen Harrison, 17 T.C. 1350 (1952); and, furthermore, one of the exceptions to the parol evidence rule is that parol evidence may be received not to contradict or vary the terms of the written contract but to explain how it is to be carried out. American Crystal Sugar Co. v. Nicholas, 124 F.2d 477 (C.A. 10, 1941). Respondent's motion to strike the oral evidence is denied.

The Internal Revenue Codes of 1939 and 1954 provide no guideposts for determining when a gift becomes complete for gift tax purposes beyond the direction [§2511(a)] that "the tax shall apply whether the transfer is in trust or otherwise, whether the gift is direct or indirect, and whether the property is real or personal,

tangible or intangible." It is well settled in cases involving this issue, however, that the question whether a transfer in trust is a completed gift, and thus subject to gift tax, turns on whether the settlor has abandoned sufficient dominion and control over the property transferred to put it beyond recall. Burnet v. Guggenheim, 288 U.S. 280 (1933); Estate of Sanford v. Commissioner, 308 U.S. 39 (1939); Smith v. Shaughnessy, 318 U.S. 176 (1943).

Here we do not have a situation where the settlor either reserved the power in himself alone to modify, alter, or revoke the trust and thus revest the trust property in himself, as in Burnet v. Guggenheim, supra, or reserved the power to alter the disposition of the property or income therefrom in some way not beneficial to himself, as in Estate of Sanford v. Commissioner, supra, or reserved the power in conjunction with someone else to modify, alter, or revoke the trust, as in Camp v. Commissioner, 195 F.2d 999 (C.A. 1, 1952), reversing in part 15 T.C. 412 (1950). Leon reserved no rights in himself to change the disposition of the income or principal of the trust as fixed in the trust agreement. However, the trust agreement itself gave the trustee power to pay directly to Leon or for his benefit as much of the principal of the trust as the trustee thought desirable for Leon's welfare, comfort, and support, or for his hospitalization or other emergency needs. The question is whether this discretionary power placed in the trustee by the settlor under the terms of the trust agreement made the gifts of the remainder interests incomplete for gift tax purposes.

A number of cases decided by this and other courts have held that the placing of discretionary power in the trustee to invade corpus makes the gift of corpus incomplete under certain circumstances. The rule of thumb generally accepted seems to be that if the trustee is free to exercise his unfettered discretion and there is nothing to impel or compel him to invade corpus, the settlor retains a mere expectancy which does not make the gift of corpus incomplete. Herzog v. Commissioner, 116 F.2d 591 (C.A. 2, 1941), affirming 41 B.T.A. 509 (1940). But if the exercise of the trustee's discretion is governed by some external standard which a court may apply in compelling compliance with the conditions of the trust agreement, and the trustee's power to invade is unlimited, then the gift of corpus is incomplete, Commissioner v. Irving Trust Co., 147 F.2d 946 (C.A. 2, 1945), affirming 2 T.C. 1052 (1943), and this is true even though such words as "absolute" and "uncontrolled" are used in connection with the trustee's discretion, provided the external standards are clearly for the guidance of the trustee in exercising his discretion. Estate of John J. Toeller, 6 T.C. 832 (1946), affd. 165 F.2d 665 (C.A. 7, 1948); Estate of Lelia E. Coulter, 7 T.C. 1280 (1946).

The theory behind this rule seems to be that by placing such standards for guidance of the trustee's discretion in the trust agreement itself, the settlor has not actually lost all dominion and control of the trust corpus or put it completely beyond recall because to ignore the implications and purpose for writing the standards into the invasion clause would be an abuse of discretion on the part of the trustee which the trustee would neither desire to do nor be likely to risk doing under State laws; see Estate of Christianna K. Gramm, 17 T.C. 1063 (1951); Estate of John J. Toeller, supra; or because by borrowing money and relegating his creditors to the trustee for satisfaction of their debts the settlor could have effective use of the corpus for his own benefit,[1] see Alice Spaulding Paolozzi, 23 T.C.

[1] The rights of creditors to reach the income and/or principal of a discretionary trust for satisfaction of their claims against the settlor may not be the same in all States. Compare Sarah Gilkey Vander Weele, 27 T.C. 340 (1956), affd. 254 F.2d 895 (C.A. 6, 1958), involving Michigan law, and Alice Spaulding Paolozzi, 23 T.C. 182 (1954), involving Massachusetts law, with Herzog v. Commissioner, 116 F.2d 591 (C.A. 2, 1941), affirming 41 B.T.A. 509 (1940), involving New York law. See also Restatement, Trusts, sec. 156(2) [creditors of a person creating a discretionary trust

182 (1954); Sarah Gilkey Vander Weele, 27 T.C. 340 (1956), affd. 254 F.2d 895 (C.A. 6, 1958).

The rule of thumb appears to be a reasonable application of the general rule established in the *Guggenheim, Sanford,* and *Shaughnessy* cases because where there is a reasonable possibility that the entire corpus might be repaid to the settlor there can be no assurance that anyone else will receive anything in the form of a gift, and if the corpus should happen to be kept intact until the settlor's death, even though the transfer in trust was not subjected to a gift tax, the corpus of the trust will in all likelihood be subjected to the estate tax in the settlor's estate. See Estate of John J. Toeller, supra; Estate of Lelia E. Coulter, supra.

Applying the above principles to the facts under consideration here, we conclude that no part of or interest in the property transferred to the trust constituted a completed gift for gift tax purposes when transferred to the trust.

The form of the trust agreement indicates that the principal beneficiary of the income, and the principal if it became desirable for his welfare, comfort, support, or emergency needs, was the settlor. The first instructions to the trustee, as shown by the part of the deed of trust quoted in our Findings of Fact, were to distribute net income and principal to the settlor during his lifetime. Only upon the death of the settlor, and if she survived him, was any provision made for payment of either income or principal to the settlor's wife. And only upon the death of the survivor of settlor and his wife was any provision made for distribution of the "then-remaining principal." The trustee had the unfettered power to use all of the corpus for the benefit of settlor, if it thought that it was desirable for the welfare, comfort, or needs of the settlor. The words used were broad enough to cover about anything Leon might want or need. It is reasonable to assume that the trustee would invade corpus and that it would be required to do so by a court if the welfare, comfort, or needs of the settlor made it seem desirable. Otherwise, there would not have been much reason for including the paragraph giving the trustee power to invade principal. It was entirely possible that the entire corpus might be distributed during the settlor's lifetime and no one other than the settlor would receive any portion thereof. As long as that possibility was present, by reason of the language employed by the settlor, the settlor had not abandoned sufficient dominion and control over the property transferred to make the gift consummate. Estate of John J. Toeller, supra.

In addition to the trust agreement itself, the evidence indicates that the settlor, who was 80 years of age when the trust was established, expressed concern over whether he would have available sufficient funds to meet his needs. He asked the trust officer whether he would have enough money to buy an automobile and the trust officer reassured him by telling him that the trust agreement provided for the payment of all income to him and that he could also have money out of the principal, and that the trustee would be liberal in giving him money out of the principal. While the term "liberal" is not defined, the above conversation indicates the understanding of the parties was that the trustee recognized that principal should be distributed at any time the settlor's needs reasonably justified it.

The evidence also indicates that one reason Leon established the trust was because he was having difficulty managing the property placed in the trust. The original property transferred to the trust consisted of approximately 200 small mortgages which had been kept in a metal container in Leon's basement, the

can reach the maximum amount which the trustee could pay to him or apply for his benefit]. While we do not rely on this theory and hence are not called upon to interpret the Pennsylvania law, a cursory examination of the law of that State would indicate it would follow the rule in Michigan and Massachusetts that will not permit a settlor to place property in trust for his own benefit and keep it beyond the reach of creditors. . . .

records on which the trustee discovered to be very inaccurate and inadequate. It is probable that management of the trust property was more of a motivating factor for Leon's establishment of the trust than a desire to put what appears to have been a considerable part of his remaining property completely beyond his reach.

While the language used in the trust instruments and the surrounding circumstances involved in the *Vander Weele* and *Gramm* cases were a little different than the language used in this trust instrument and the circumstances here involved, we think they were close enough to compel the conclusion we reach here. We do not believe respondent's argument that because of Leon's wealth it was very unlikely that the trustee would ever be called upon to use much of the corpus is well founded. It appears from the evidence that when Leon established this trust he had given away most of his property.

Decision will be entered for the petitioner.

NOTE

1. *Discretionary power to revest transferred property.* Does the court hold that a transfer in trust is not a "gift" if "there is a reasonable possibility that the entire corpus might be repaid to the settlor"? What if no standards were set out in the trust instrument to govern the trustee's exercise of discretion? Should the trustee's testimony regarding the establishment of the trust have been admitted if it would have been excluded in an action by the settlor against the trustee to compel an exercise of the trustee's power in favor of the settlor? Would the government be entitled to ask the trustee whether the power to revest the corpus in the settlor would have been exercised "liberally" or "generously" had the settlor requested such action?

On the likelihood that a trustee will be responsive to the settlor's desires, a commentator has said:

> Even a corporate fiduciary may be susceptible to pressure from the grantor in its exercise of discretionary powers as trustee. The grantor may be a customer of the commercial department as well as the trust department, or the corporate fiduciary may anticipate serving as executor of the grantor's estate and as trustee under his will if no untoward development should mar the relationship. Quite apart from such specific pressures is the more general one that arises from the nature of a fiduciary's business. As the name implies, it is engaged in the administration of trusts. A reputation in the community for being hard to get along with is unlikely to assist the work of the new business department. [Westfall, Trust Grantors and Section 674: Adventures in Income Tax Avoidance, 60 Colum. L. Rev. 326, 340 (1960).]

See also the *Gramm* case, cited by the court, involving a trust instrument which, as originally drafted, permitted an invasion of corpus for the benefit of the settlor only if the remainderman consented; the corporate trustee recommended a revision of the instrument to permit it to act without consent of the remainderman because "we would be very reluctant to act as a corporate trustee under [the instrument in its original form] inasmuch as it did not give us the right to take care of our customer, Mrs. Gramm."

Does Holtz's Estate v. Commissioner invite a prediction in each case of the manner in which the trustee will exercise its powers to invade the corpus?

See Rev. Rul. 62-13, 1962-1 C.B. 181, withdrawing the Service's previously announced nonacquiescence in the *Gramm* and *Vander Weele* case, cited by the court, and substituting an acquiescence in both cases; Clement v. Smith, 167 F. Supp. 369 (E.D. Pa. 1958) (son created trust to pay income to his father for support if trustees deemed this advisable; held, on the facts, possibility of such payments so speculative as not to constitute a gift).

2. *Transfers that can be reached by transferor's creditors.* If under local law the settlor's creditors can reach the transferred property because the trustee may exercise its power in his favor (see footnote 1 of the opinion), is the transfer incomplete? Does the answer depend on the likelihood that the settlor will incur, and fail to pay, obligations at a rate that might exhaust the corpus of the trust?

On the status of trusts to discharge the settlor's legal obligations, see page 1035 infra.

3. *Discretionary power vested in adverse party.* In *Holtz's Estate,* the discretionary power was vested in a "neutral" trustee. For the gift tax consequences if such a power is vested in the remainderman or other beneficiary of the trust, see page 1164 infra.

4. *Relation to estate tax.* For the estate tax treatment of transfers like those in *Holtz's Estate, Gramm,* and *Vander Weele,* see page 1163 infra.

LOCKARD v. COMMISSIONER

166 F.2d 409 (1st Cir. 1948)

Before MAGRUDER, MAHONEY and WOODBURY, Circuit Judges.

MAGRUDER, Circuit Judge.

Barbara M. Lockard petitions for review of a decision of the Tax Court of the United States determining that "there is a deficiency in gift tax of $5,517.39 for the year 1941." 7 T.C. 1151.

Petitioner undoubtedly made a taxable gift in 1941. In her return she claimed the full $40,000 specific exemption. [§1004, 1939 Code.]* The Commissioner disallowed this exemption to the extent of $22,595.95 on the ground that petitioner had claimed and been allowed an exemption of $19,363.93 in respect of a taxable gift made in 1938 and an exemption of $3,232.02 in respect of a taxable gift made in 1939. Petitioner now contends that she erroneously reported taxable gifts in 1938 and 1939, and therefore that no part of the specific exemption was properly consumed in either year. It is conceded by the Commissioner that the amounts which were claimed as exemptions in 1938 and 1939 were "allowed" within the meaning of [§2521] — and thus pro tanto exhausted the $40,000 specific exemption — only if the taxpayer made taxable gifts in those years. Schuhmacher v. Commissioner, 8 T.C. 453, 464 (1947); Schmidlapp v. Commissioner, 1941, 43 B.T.A. 829. On this branch of the case the question is whether the beneficiary's irrevocable right to receive the income from the corpus of a short term trust constitutes a taxable gift in the year in which the property is transferred to the trust, notwithstanding the fact that the settlor may remain taxable on such income under the doctrine of Helvering v. Clifford [supra p. 372].

On March 30, 1938, the petitioner created an irrevocable trust, with herself and another as cotrustees, under the terms of which the entire net income was directed to be paid to Derwood W. Lockard, her husband, for a term of six years; and upon April 1, 1944, or if the husband should die earlier, then on the date of his death, the principal was to revert to the settlor, free of trust. On March 30, 1939, the petitioner transferred additional property to the trust.

The Tax Court held that the transfers in trust in 1938 and 1939 constituted taxable gifts to Mr. Lockard, in those years, of the right to receive the income for a term of years; and therefore that the amounts of specific exemption claimed by petitioner in her gift tax returns for those two years, and allowed by the Commissioner, must be deducted from the $40,000 specific exemption claimed by her in her return of the 1941 gift. We agree with this conclusion. Valuation of these gifts in 1938 and 1939 is covered by stipulation and is not in dispute.

Section [2511(a)] provides that the gift tax is applicable "whether the transfer is in trust or otherwise, whether the gift is direct or indirect, and whether the property is real or personal, tangible or intangible." That the broad sweep of this language was not inadvertent is emphasized in the committee reports. H.R. Rep. No. 708, 72d Cong., 1st Sess., at p. 27, stated: "The terms 'property,' 'transfer,' 'gift,' and 'indirectly' are used in the broadest and most comprehensive sense; the term 'property' reaching every species of right or interest protected by law and

* The exemption is now only $30,000. §2521. — ED.

having an exchangeable value." See to the same effect Sen. Rep. No. 665, 72d Cong., 1st Sess., p. 39. See also Smith v. Shaughnessy, 1943, 318 U.S. 176, 180, in which the court states that the amplitude of legislative purpose, thus expressed, "is broad enough to include property, however conceptual or contingent."

By the transfer in trust in 1938, Mr. Lockard acquired an equitable right to the income from the property for a period of six years, subject only to his earlier death. He then received a legally protected interest "having an exchangeable value"; and the commuted value of this right of future income is readily calculable. Helvering v. McCormack, 2 Cir., 1943, 135 F.2d 294, 296. See art. 19(7) of Regulations 79 (1936 Ed.). To the extent of this interest, the settlor abandoned control of the property upon its transfer in trust. Not only did the settlor reserve no power to revoke, and revest in herself, the beneficial interest thus donated; she could not even modify the donee's interest or shift the benefit, in whole or in part, to another. The transfer, therefore, meets every test of taxability under the language of the Act and under the criteria laid down in Smith v. Shaughnessy, supra. The same may be said of the additional transfer to the trust made in 1939.

The foregoing conclusion would have seemed inevitable and inescapable if one had never heard of Helvering v. Clifford, a case involving income tax liability. It is recited in the stipulation in the case at bar that the distributable trust income for the years 1938-1941, inclusive, was included by the Commissioner in the income of Mrs. Lockard under I.R.C. §22(a) [§61(a), 1954 Code], as interpreted in the *Clifford* case. Exegesis of Helvering v. Clifford has proceeded apace, and not without difficulty, in a large volume of subsequent litigation in the lower federal courts. . . . No doubt there would be many judicial sighs if the great body of *Clifford* learning had to be imported into gift tax litigation. But as this court held in Commissioner v. Prouty, 1 Cir., 1940, 115 F.2d 331, 337, "the gift tax does not seem to be so closely integrated with the income tax that decisions like the *Clifford* case extending the applicability of Section 22(a) [§61(a), 1954 Code] to the grantor of a trust, must necessarily be read as holding that no gift tax was payable upon the creation of the trust." [1] We tried to point out again, at considerable length, in Higgins v. Commissioner, 1 Cir., 1942, 129 F.2d 237, certiorari denied 1942, 317 U.S. 658, that under existing provisions of law respecting income, gift and estate taxes, it is quite impossible for the courts to achieve a complete integration of these three taxes. Chief Justice Stone made an apparent effort in Estate of Sanford v. Commissioner, 1939, 308 U.S. 39, to bring about a measure of correlation between the gift tax and the estate tax, by his statement, page 44 of 308 U.S., that the test of completeness of a transfer for purposes of the gift tax is no different "from that to be applied in determining whether the donor has retained an interest such that it becomes subject to the estate tax upon its extinguishment at death." Cf. Higgins v. Commissioner, supra, 1 Cir., 129 F.2d at page 240-242. But in Smith v. Shaughnessy, 1943, 318 U.S. 176, the Supreme Court disavowed any intention to intimate in the *Sanford* case that there was "a general policy against allowing the same property to be taxed both as an estate and as a gift," page 178 of 318 U.S.; and pointed out that the plan of Congress for integrating the estate and gift taxes is to be found in the provision of law granting a credit on estate taxes by reason of previous payment of gift taxes on the same property* — a "system of secured payment on gifts which will later be subject to the estate tax," page 179 of 318 U.S. Aside from this, it seems that for the most part any correlation that may exist between the three taxes is "purely coincidental."

---

1 In fact, in the *Clifford* case itself, in which the income of a particular short term trust was held taxable to the settlor-trustee, the Court noted (309 U.S. at page 333) that the settlor had paid a federal gift tax upon the transfer in trust.

* Infra page 1330. — Ed.

Petitioner does not contend that there is a complete integration between the income tax and gift tax, so that the mere fact that a transfer leaves the transferor still liable to income tax on the property always negatives a gift tax liability; but she does argue that the same question of fact underlies both liability for income tax under the *Clifford* rule, and liability for gift tax — namely, whether the settlor, after the transfer in trust, remains in substance the owner of the corpus. If, notwithstanding the transfer, the settlor is deemed to remain in substance the owner of the corpus, the income therefrom — the fruit of the tree — is, for income tax purposes, attributable to the settlor, and the settlor does not escape an income tax thereon "by any kind of anticipatory arrangement, however skillfully devised, by which he procures payment of it to another, since, by the exercise of his power to command the income, he enjoys the benefits of the income on which the tax is laid." Harrison v. Schaffner, 1941, 312 U.S. 579, 582. See Commissioner v. Bateman, 1 Cir., 1942, 127 F.2d 266, 271-274. Petitioner argues from this that, for income tax purposes, the result is the same as if the settlor of the short term trust had continued to receive the income yearly and had made a series of assignments of such income. It is contended, further, that similar treatment for gift tax purposes is appropriate, so that no gift tax should be payable when the trust is created, but actual payments of income to the beneficiary should be taxable as gifts when such payments are made from year to year.* This suggested mode of treatment may be appropriate and reasonable; the only trouble with it is that it is not sanctioned by the statutory scheme. As we have already pointed out, the income tax and gift tax each has its own independent criteria of taxability. In the trust now before us it may be true, under Helvering v. Clifford, that for income tax purposes the result is the same as if Mrs. Lockard had herself received the income each year and had made a series of assignments of it to her husband. But the fact is that she did not receive the income and then give it away by successive assignments. Upon creating the trust she made a single transfer whereby her husband then and there acquired an irrevocable right to the income for a period of years. Under the plain language of the gift tax, and under the authorities above cited, this intangible right to future income must be valued as of the date of the transfer in trust, and taxed to the donor. . . .

A judgment will be entered affirming the decision of the Tax Court.

NOTE

1. *Other aspects of correlation with income tax.* In Strong v. Commissioner, 7 T.C. 953 (1946), it was held that the creation of a family partnership was not a taxable gift. In an earlier income tax proceeding, the Tax Court had refused to give tax effect to the partnership on the ground that certain purported transfers of business interests were not "valid gifts." When gift tax liability was asserted, the Tax Court held that the principle of res judicata was applicable: "In other words, the Commissioner, having secured a holding in the prior cases that there were no completed gifts made by the transaction of October 1, 1940, can not now be heard to say, in a proceeding involving the same parties, that there were valid completed gifts made in those transactions." 7 T.C. at 957. (On the use of res judicata in tax cases, see pages 938-943 supra.) One judge dissented and three others thought the doctrine of res judicata was not applicable, but concurred on the ground that in fact no gifts had been made.

Does §704(e), relating to family partnerships and enacted after the *Strong* case was decided, adopt the gift tax conception of a completed transfer in determining the validity of a family partnership under the income tax? Supra page 396.

See Commissioner v. Beck's Estate, 129 F.2d 243 (2d Cir. 1942), holding the grantor

* This is the way the income of a revocable trust is treated. See the last paragraph of Burnet v. Guggenheim, supra page 1007; Commissioner v. Warner, 127 F.2d 913 (9th Cir. 1942). — Ed.

of a trust liable for a gift tax on the entire value of the corpus, although the income was to be used to pay the premiums on insurance on his life and would therefore be taxable to him under §677(a)(3) (supra p. 371). After citing several other cases in which a lack of coordination among the federal income, estate, and gift taxes was recognized, Judge Frank said:

> At the bottom of [taxpayers'] contentions is this implied assumption: The same transaction cannot be a completed gift for one purpose and an incomplete gift for another. Of course, that is not true, as the cases above cited make clear. Perhaps to assuage the feelings and aid the understanding of affected taxpayers, Congress might use different symbols to describe the taxable conduct in the several statutes, calling it a "gift" in the gift tax law, a "gaft" in the income tax law, and a "geft" in the estate tax law. [129 F.2d at 246.]

See also the *Farid-Es-Sultaneh* case, supra page 133; Gault v. Commissioner, 216 F.2d 41 (7th Cir. 1954).

In Stone v. Stone, 319 Mich. 194, 29 N.W.2d 271 (1947), the plaintiffs sued successfully to set aside transfers of partnership assets to their children on the ground of mutual mistake, after the Commissioner decided that the partnership would not be recognized for income tax purposes. Could the transferors then recover any gift taxes paid on the conveyances? Board v. Commissioner, 14 T.C. 322 (1950); see also Lowry v. Kavanagh, 322 Mich. 532, 34 N.W.2d 60 (1948).

In Rev. Rul. 57-315, 1957-2 C.B. 624, the Internal Revenue Service ruled that a transfer similar to the one in White v. Fitzpatrick, supra page 406, was a completed gift, even though the subsequent annual payments would not be deductible business expenses in computing the donor's income tax liability. In so ruling, the Service cited the *Lockard* case.

2. *Value of rights retained by taxpayer in Lockard case.* Another issue in the *Lockard* case was the value, for gift tax purposes, of the 1941 gift. As a result of the 1941 transfer, Mr. Lockard was to receive the income of a trust for life, plus such amounts from principal, not in excess of $3000 in any calendar year, as the trustee "in his uncontrolled discretion shall think necessary for [Mr. Lockard's] comfortable maintenance and support." On Mr. Lockard's death, the corpus was to revert to Mrs. Lockard. The Commissioner valued the gift on the assumption that the trustee would pay Mr. Lockard $3000 per year plus the income from the diminishing corpus. This value was upheld by the Tax Court and the Court of Appeals, primarily because the taxpayer did not advance any reliable actuarial method of computing the value of Mrs. Lockard's reserved right to get the corpus back intact if the trustee should not find it necessary to invade it for Mr. Lockard's "comfortable maintenance and support."

3. *One gift or a series of annual gifts?* In *Lockard,* the court held that a gift was made when the trust was created; see also Rev. Rul. 57-315, 1957-2 C.B. 624. Why would the taxpayer have preferred to treat the transaction as giving rise to a series of annual gifts of the trust income? See also Archbold v. Commissioner, 42 B.T.A. 453 (1940) (promise to make a series of gifts; held, gifts are made annually); Harris v. Commissioner, 178 F.2d 861 (2d Cir. 1949), rev'd on other grounds, infra page 1036.

SECTION C. TRANSFER OF "PROPERTY" BY GIFT: §2501(a)

BRADFORD v. COMMISSIONER
34 T.C. 1059 (1960)

DRENNEN, Judge: Respondent determined a deficiency in gift tax against petitioner. . . .

The single issue is whether petitioner's substitution of her promissory note in the amount of $205,000 for notes of her husband held by a bank in 1938 constituted a taxable gift to her husband in the amount of $205,000 in the year 1938. . . .

[The facts are set out in Bradford v. Commissioner, supra page 89.]

Petitioner contends that the transaction did not constitute a transfer of property by gift within [§2501(a)], because the note executed by petitioner and delivered to the bank was not "property" in her hands, and, further, that even if she did transfer property to her husband by gift in 1938, the value of the property transferred was substantially less than the exemption and exclusion . . . so there is no gift tax liability.

Respondent's position is that the subject of the gift was the entire transaction whereby petitioner's husband was relieved of his indebtedness by the execution and delivery of petitioner's note to the bank, thereby resulting in a transfer of economic benefits which would qualify as a "gift" in the broad and comprehensive sense of that word as used in the statute. . . .

We are of the opinion that the transactions . . . did not constitute a taxable gift from petitioner to her husband in the year 1938 within the purview of the statute. We have found no gift tax cases involving facts similar to those here present, but most gift tax cases must be decided on their own facts anyway. Various general principles have developed through case law and the regulations, and our conclusion is based on the application of some of these principles which seem founded on common sense to the facts in this case.

The gift tax is an excise tax on the transfer of property without adequate and full consideration. Gift tax liability is dependent on the transfer of property by the donor, not the receipt of property by the donee, and the measure of the tax is the value of the property passing from the donor at the time the transfer is completed. Estate of Koert Bartman, 10 T.C. 1073. . . . While the presence of donative intent on the part of the donor is said no longer to be a necessary element to make a transfer subject to gift tax, as it had always been considered to be in the common law connotation of gifts, the transfer must be donative in character, and we think donative intent may still be a material factor in determining whether a taxable gift has been made. See Sarah Helen Harrison, 17 T.C. 1350, 1357. It is true that application of the tax is determined more from the objective facts and circumstances of the transfer and what was accomplished, rather than the subjective motives of the donor, Commissioner v. Wemyss, 324 U.S. 303, but the objective standards used in the tax concept of a gift in effect supply the necessary donative intent of which the donor may not have been conscious. But in any event it seems clear that to constitute a gift for tax purposes there must be a transfer of property owned by the donor with a clear and unequivocal intent on the part of the donor to divest himself presently of the property transferred, and dominion and control thereof. 5 Mertens, Law of Federal Gift and Estate Taxation, secs. 34.01 et seq.

The facts and circumstances surrounding the transaction here involved do not convince us that petitioner intended to divest herself of any property or interest therein owned by her in 1938, or that any of the parties involved anticipated that any of her property would ever be used to satisfy the obligation to the bank. In the first place she did not own property in 1938 that would have come anywhere near satisfying the obligation to the bank,* and she had no prospects of acquiring any except through her husband. Secondly, the entire transaction was arranged by [Mr. Bradford], his collateral was retained as security for petitioner's note, and he testified that it was understood that the bank would look first to his collateral for liquidation of the obligation, and he hoped and expected that the collateral

* According to the findings of fact, Mrs. Bradford's net worth when she executed the note for $205,000 was $15,780. — Ed.

would increase sufficiently in value to cover the entire obligation. [Mr. Bradford] paid the interest on the loan and it is reasonable to assume that all parties involved looked to [Mr. Bradford's] assets and his earning power to liquidate the loan.

This does not mean that petitioner was not obligated on the indebtedness evidenced by her note. We assume the bank could have taken judgment against her on the note had it not been paid, and levied on her property to help satisfy the judgment, and that it probably would have done so had that course of action become necessary. But unless and until such action was taken we do not believe petitioner parted with, or intended to part with, dominion and control of any property owned by her which would give rise to a gift tax.

Granted that [§2501(a)] is comprehensive enough to "include property, however conceptual or contingent," Smith v. Shaughnessy, 318 U.S. 176, and to reach any passage of control over the economic benefits of property, Estate of Sanford v. Commissioner, 308 U.S. 39; nevertheless, no matter how intangible, the donor must own a property right or interest which is capable of being, and is, transferred. Commissioner v. Mills, 183 F.2d 32 (C.A. 9, 1950), affirming 12 T.C. 468. Petitioner transferred no property or interest in property in 1938 but only made a promise to pay in the future if called upon to do so. John D. Archbold, 42 B.T.A. 453. The fact that [Mr. Bradford] may have derived some economic benefit in 1938 as a result of this promise is not controlling. . . .

This case presents a situation different from those present in Estate of Ira C. Copley, 15 T.C. 17, affd. 194 F.2d 364 (C.A. 7, 1952), and Paul Rosenthal, 17 T.C. 1047, reversed on other grounds 205 F.2d 505 (C.A. 2, 1953). In those cases there was a definite obligation to pay a fixed amount, whereas here there was no certainty in 1938 that petitioner would ever have to pay anything.

We hold that petitioner did not make a transfer of property by gift in 1938. Cf., Minnie E. Deal, 29 T.C. 730. We might add, as suggested in D. S. Jackman, 44 B.T.A. 704, that taxation is a practical matter and it seems incredible that a person having a net worth of only $15,780 could make a gift of $205,000.

NOTE

1. *Transfer of "property."* In the *Copley* case, cited by the court, the taxpayer entered into an antenuptial agreement in 1931, under which he agreed to transfer $1 million to his intended bride immediately after their marriage, while she agreed that he should "take over the management [of the fund] to the end that its value may be preserved and made productive," that one half should be returned to him or his estate on her death, and that she would later create a trust for the administration of the fund pursuant to the antenuptial agreement. In 1936 and 1944, the taxpayer transferred $500,000 in notes of a business corporation and $500,000 of preferred stock, respectively, in satisfaction of his obligation. It was held, one judge dissenting, that the 1936 and 1944 transactions were not gifts; the opinion implies, but avoids explicitly holding, that there would have been a taxable gift in 1931, when the antenuptial agreement was executed, if the gift tax had been in effect for that year. For the *Rosenthal* case, also cited by the court, see infra page 1042.

Would the result in the *Bradford* case have been different if in 1938 the wife had executed a promissory note in the amount of $205,000 in favor of her husband and he had endorsed it to the bank in substitution for his own notes? Does the *Bradford* case suggest that the gift tax can be avoided if the method used for transferring funds to an impecunious relative is to endorse his notes and to pay the lender when he defaults?

See also French v. Commissioner, 138 F.2d 254 (8th Cir. 1943); G.C.M. 16460, XV-1 C.B. 369 (gifts of checks and notes); Spiegel's Estate v. Commissioner, supra page 787

(date of charitable contribution, for income tax purposes, when made by check executed in one year but not paid until following year).

2. *Disclaimers and renunciations as gifts.* If the legatee under a will refuses to accept his legacy, with the result that the residuary is increased, has he made a "transfer of property by gift" within the meaning of §2501(a)? What if an intestate successor renounces his share of an intestate estate? See Regs. §25.2511-1(c); Hardenbergh v. Commissioner, 198 F.2d 63 (8th Cir. 1952), cert. denied, 344 U.S. 836; Fuller v. Commissioner, 37 T.C. 147 (1961); Rev. Rul. 56-472, 1956-2 C.B. 21 (executor agreed, before rendition of services, to accept an amount that was less than local law allowed; held, not a gift); Lentz, Income and Gift Tax Effects of Renunciation of a Bequest or Inheritance, 21 N.Y.U. Inst. on Fed. Taxation 313 (1963); Roehner and Roehner, Renunciation As Taxable Gift — An Unconstitutional Federal Tax Decision, 8 Tax L. Rev. 289 (1953); Note, Anticipated Problems Under Proposed Treasury Regulations §25.2511-1(c), 30 Rocky Mt. L. Rev. 48 (1957). See also infra page 1270.

Did the taxpayer in the *Teschner* case (supra p. 346) make a "gift" when he designated his daughter as the recipient of any prize that might be awarded for his essay?

COMMISSIONER v. HOGLE

165 F.2d 352 (10th Cir. 1947)

Before PHILLIPS, BRATTON, and HUXMAN, Circuit Judges.

PHILLIPS, Circuit Judge.

The Commissioner assessed gift taxes against Hogle for the years 1936 to 1941, inclusive. On review, the Tax Court held there were no deficiencies in gift taxes for those years.

The question presented is whether or not annual earnings of two trusts, one known as the Copley Trust, and one known as the Three Trust, during the years in question, from trading in securities and commodities carried on by the trusts under Hogle's direction, amounted to gifts by Hogle to the trusts. These trusts were before this court in Hogle v. Commissioner, 10 Cir., 132 F.2d 66, and the facts with respect to such trusts are there fully set out.

The Copley Trust was created in 1922 by Hogle and his wife for the benefit of their three children. It consisted of a securities trading account to be managed and operated under Hogle's direction, the property accruing to the trust to be divided among the children on April 15, 1945. The trust was irrevocable and Hogle retained no right to alter or amend the trust instrument, or to change the beneficial interests. None of the principal or income could revest in Hogle. It provided that any losses resulting from trading in excess of the "profits and various income returns thereof" should be made good by Hogle, and that any such losses should not become an indebtedness of the trustee or the beneficiaries, but that any such losses made good by Hogle should be returned to him out of the first profits that accrued from further transactions.

On October 7, 1922, a margin account was opened for the trust with J. A. Hogle & Company, a brokerage partnership, consisting of Hogle and his wife, and in which the three children subsequently became partners. The trading resulted in profits in every year, except 1928 and 1929. In those years, certain securities were given to the trust by Hogle and his wife. The profits and benefits in the trust were divided on April 15, 1945, among the three children, and the trust was terminated.

In 1932, Hogle opened a trading account with the partnership in the name of the Three Trust account and a few days thereafter, Hogle and his wife created the Three Trust, consisting of a securities trading account for the benefit of the three children. The trust was irrevocable and was in all respects like the Copley

Trust, with the exception it was to terminate on April 15, 1950, and income could be distributed in the meantime in the discretion of Hogle and any two of the three trustees. Although the trading was conducted in the name of the trust, receipts and disbursements were credited and debited to the individual beneficiaries according to the specified share of each during the term of the trust. Gains and profits were realized in every year, including the taxable years.

The net worth of each trust in each of the years for which the gift taxes were assessed was more than sufficient to provide the margins required to cover the trading carried on for it.

In Hogle v. Commissioner, supra, we held, under the doctrine of Helvering v. Clifford, 309 U.S. 331, that the net income resulting from trading on margin was taxable to Hogle. We do not think it follows, however, that the net income in each of the taxable years derived from trading constituted a gift thereof by Hogle to the trusts.

Section [2501(a) imposes] a tax upon the transfer, during the calendar year, of property by gift. . . . And Treasury Regulations [§25.2511-1] provides among other things that a gift tax is imposed whether the transfer is in trust or otherwise, whether the gift is direct or indirect, and whether the property is real or personal, tangible or intangible; and further, that the tax applies to all transactions whereby property or property rights or interests are donatively passed or conferred upon another. The purpose of the statute is to reach and lay a tax upon every type and kind of transfer of property by gift. With that legislative purpose in mind, the terms "property," "transfer," "gift," and "indirectly," as used in the statute, should be interpreted in their broadest and most comprehensive sense. But the tax cannot be sustained unless there was a transferor, a transferee, and an effective transfer of title or other economic interest or benefit in property having the quality of a gift.

The net income derived from trading carried on in behalf of the trusts accrued immediately and directly to the trusts, and did not consist of income accruing to Hogle which he transferred by anticipatory gift to the trusts. Hogle never owned or held an economic interest in such income. Likewise, since the funds in the trusts were sufficient to provide the margins required to cover the trading carried on in the taxable years, any losses resulting from trading would have been suffered immediately and directly by the trusts. What, in fact and in reality, Hogle gave to the trusts in the taxable years was his expert services in carrying on the trading, personal services in the management of the trusts. Hogle could give or withhold his personal services in carrying on trading on margin for the trusts. He could not withhold from the trusts any of the income accruing from trading on margin. How could he give what he could not withhold? There was no transfer directly or indirectly from Hogle to the trusts of title to, or other economic interest in, the income, from trading on margin, having the quality of a gift. In short there was no transfer directly or indirectly by Hogle to the trusts of property or property rights.

The Commissioner places strong reliance upon Hogle v. Commissioner, supra, to sustain the contention that the income arising from the trading on margin represented personal earnings of Hogle; and that Hogle in substance gave to the trusts the profits derived from part of his individual efforts. Certain excerpts from the opinion are emphasized in support of the argument that the net income arising from the trading on margin for the benefit of the trusts represented earnings of Hogle, and that, upon the accrual of such income to the trusts, a transfer having the quality of a gift was effectuated within the meaning of [§2501(a)]. But, we think a critical reading of the opinion in that case in its entirety will indicate that it does not support the Commissioner's contention. While the court

drew a distinction between the income tax liability of Hogle on profits accruing to the trusts from trading on margin and gains accruing to the trusts from other sources, and held that he was liable for the tax on net income derived from such trading but not on gains accruing from other sources, his liability for tax on the net income derived from trading on margin was predicated upon his power to control indirectly the extent of the profit derived from such trading by determining the extent and amount of such trading. Despite certain statements contained in the opinion on which the Commissioner relies, the basis of the holding that Hogle was liable for income tax on the net income resulting from trading on margin was his power to control the extent of such trading and therefore the extent of the income therefrom. It was predicated on his power to dominate the amount of income that would accrue from trading. That was the essence of our holding. We did not hold that such income accrued first to Hogle and was by him transferred by anticipatory gift to the trusts.

Our holding in Hogle v. Commissioner, supra, was an extreme application of the doctrine of the *Clifford* case, supra. To hold that the profits accruing from trading in margins constitute gifts from Hogle to the trusts, we think, would be an unjustified extension of the doctrine of the *Clifford* case.

Affirmed.

HUXMAN, Circuit Judge, concurs in the result.

NOTE

Gift of "services." Does *Hogle* rest on the ground that the taxpayer made a gift of his services, not of "property" within the meaning of §2501(a) (tax is imposed "on the transfer of property by gift")? Did the taxpayers in Lucas v. Earl (supra p. 343), G.C.M. 27026 (supra p. 344), and Teschner v. Commissioner (supra p. 346) make gifts of "property"?

SECTION D. TRANSFERS FOR CONSIDERATION AND/OR IN DISCHARGE OF LEGAL OBLIGATIONS

COMMISSIONER v. WEMYSS

324 U.S. 303 (1945)

MR. JUSTICE FRANKFURTER delivered the opinion of the Court.

In 1939 taxpayer proposed marriage to Mrs. More, a widow with one child. Her deceased husband had set up two trusts, one half the income of which was for the benefit of Mrs. More and the other half for that of the child with provision that, in the event of Mrs. More's remarriage, her part of the income ceased and went to the child. The corpus of the two trusts consisted of stock which brought to Mrs. More from the death of her first husband to her remarriage, about five years later, an average income of $5,484 a year. On Mrs. More's unwillingness to suffer loss of her trust income through remarriage the parties on May 24, 1939, entered upon an agreement whereby taxpayer transferred to Mrs. More a block of shares of stock. Within a month they married. The Commissioner ruled that the transfer of this stock, the value of which, $149,456.13, taxpayer does not controvert, was subject to the Federal Gift Tax. Accordingly, he assessed a deficiency which the Tax Court upheld, 2 T.C. 876, but the Circuit Court of Appeals reversed the Tax Court, 144 F.2d 78. We granted certiorari to settle uncertainties in tax administration engendered by seemingly conflicting decisions. 323 U.S. 703.

The answer to our problem turns on the proper application of [§§2501(a) and 2512(b)] to the immediate facts.

In view of the major role which the Tax Court plays in federal tax litigation,

it becomes important to consider how that court dealt with this problem. Fusing, as it were, [§§2501(a) and 2512(b)], the Tax Court read them as not being limited by any common law technical notions about "consideration." And so, while recognizing that marriage was of course a valuable consideration to support a contract, the Tax Court did not deem marriage to satisfy the requirement of [§2512(b)] in that it was not a consideration reducible to money value. Accordingly, the Court found the whole value of the stock transferred to Mrs. More taxable under the statute and the relevant Treas. Reg. [§25.2512-8]: "A consideration not reducible to a money value, as love and affection, promise of marriage, etc., is to be wholly disregarded, and the entire value of the property transferred constitutes the amount of the gift." In the alternative, the Tax Court was of the view that if Mrs. More's loss of her trust income rather than the marriage was consideration for the taxpayer's transfer of his stock to her, he is not relieved from the tax because he did not receive any money's worth from Mrs. More's relinquishment of her trust income, and, in any event, the actual value of her interest in the trust, subject to fluctuations of its stock earnings, was not proved. One member of the Tax Court dissented, deeming that the gift tax legislation invoked ordinary contract conceptions of "consideration."

The Circuit Court of Appeals rejected this line of reasoning. It found in the marriage agreement an arm's length bargain and an absence of "donative intent" which it deemed essential: "A donative intent followed by a donative act is essential to constitute a gift; and no strained and artificial construction of a supplementary statute should be indulged to tax as a gift a transfer actually lacking donative intent." 144 F.2d 78, 82.

Sections [2501(a) and 2512(b)] are not disparate provisions. Congress directed them to the same purpose, and they should not be separated in application. Had Congress taxed "gifts" simpliciter, it would be appropriate to assume that the term was used in its colloquial sense, and a search for "donative intent" would be indicated. But Congress intended to use the term "gifts" in its broadest and most comprehensive sense. H. Rep. No. 708, 72nd Cong., 1st Sess., p. 27; S. Rep. No. 665, 72nd Cong., 1st Sess., p. 39; cf. Smith v. Shaughnessy, 318 U.S. 176; Robinette v. Helvering, 318 U.S. 184. Congress chose not to require an ascertainment of what too often is an elusive state of mind. For purposes of the gift tax it not only dispensed with the test of "donative intent." It formulated a much more workable external test, that where "property is transferred for less than an adequate and full consideration in money or money's worth," the excess in such money value "shall, for the purpose of the tax imposed by this title, be deemed a gift. . . ." And Treasury Regulations have emphasized that common law considerations were not embodied in the gift tax.[1]

To reinforce the evident desire of Congress to hit all the protean arrangements which the wit of man can devise that are not business transactions within the meaning of ordinary speech, the Treasury Regulations make clear that no genuine business transaction comes within the purport of the gift tax by excluding "a sale, exchange, or other transfer of property made in the ordinary course of business (a transaction which is bona fide, at arm's length, and free from any donative intent)." Treas. Reg. [§25.2512-8]. Thus on finding that a transfer in the circumstances of a particular case is not made in the ordinary course of business, the transfer becomes subject to the gift tax to the extent that it is not made "for an

[1] Treas. Reg. 79 (1936 Ed.) Art. 1 [now Regs. §25.2512-8]: "*Imposition of tax.* . . . The tax is not limited in its imposition to transfers of property without a valuable consideration, which at common law are treated as gifts, but extends to sales and exchanges for less than an adequate and full consideration in money or money's worth."

adequate and full consideration in money or money's worth." See 2 Paul, Federal Estate and Gift Taxation (1942) p. 1113.

The Tax Court in effect found the transfer of the stock to Mrs. More was not made at arm's length in the ordinary course of business. It noted that the inducement was marriage, took account of the discrepancy between what she got and what she gave up, and also of the benefit that her marriage settlement brought to her son. These were considerations the Tax Court could justifiably heed, and heeding, decide as it did. Its conclusion on the issue before it was no less to be respected than were the issues which we deemed it was entitled to decide as it did in Dobson v. Commissioner, 320 U.S. 489, Commissioner v. Heininger, 320 U.S. 467, Commissioner v. Scottish American Co., 323 U.S. 119.

If we are to isolate as an independently reviewable question of law the view of the Tax Court that money consideration must benefit the donor to relieve a transfer by him from being a gift, we think the Tax Court was correct. See Commissioner v. Bristol, 121 F.2d 129. To be sure, the Revenue Act of 1932 does not spell out a requirement of benefit to the transferor to afford relief from the gift tax. Its forerunner, §320 of the 1924 Act, was more explicit in that it provided that the excess of the transfer over "the consideration received shall . . . be deemed a gift." It will hardly be suggested, however, that in re-imposing the gift tax in 1932 Congress meant to exclude transfers that would have been taxed under the 1924 Act. The section [§2512(b)] taxing as gifts transfers that are not made for "adequate and full [money] consideration" aims to reach those transfers which are withdrawn from the donor's estate. To allow detriment to the donee to satisfy the requirement of "adequate and full consideration" would violate the purpose of the statute and open wide the door for evasion of the gift tax. See 2 Paul, supra, at 1114.

Reversed.

MR. JUSTICE ROBERTS dissents, and would affirm the judgment for the reasons given in the opinion of the Circuit Court of Appeals.

MERRILL v. FAHS

324 U.S. 308 (1945)

MR. JUSTICE FRANKFURTER delivered the opinion of the Court.

This is a companion case to Commissioner v. Wemyss.

On March 7, 1939, taxpayer, the petitioner, made an antenuptial agreement with Kinta Desmare. Taxpayer, a resident of Florida, had been twice married and had three children and two grandchildren. He was a man of large resources, with cash and securities worth more than $5,000,000, and Florida real estate valued at $135,000. Miss Desmare's assets were negligible. By the arrangement entered into the day before their marriage, taxpayer agreed to set up within ninety days after marriage an irrevocable trust for $300,000, the provisions of which were to conform to Miss Desmare's wishes. The taxpayer was also to provide in his will for two additional trusts, one, likewise in the amount of $300,000, to contain the same limitations as the inter vivos trust, and the other, also in the amount of $300,000, for the benefit of their surviving children. In return Miss Desmare released all rights that she might acquire as wife or widow in taxpayer's property, both real and personal, excepting the right to maintenance and support. The inducements for this agreement were stated to be the contemplated marriage, desire to make fair requital for the release of marital rights, freedom for the taxpayer to make appropriate provisions for his children and other dependents, the uncertainty surrounding his financial future and marital tranquillity. That such

an antenuptial agreement is enforceable in Florida is not disputed, . . . nor that Florida gives a wife an inchoate interest in all the husband's property contingent during his life but absolute upon death. . . . The parties married, and the agreement was fully carried out.

On their gift tax return for 1939, both reported the creation of the trust but claimed that no tax was due. The Commissioner, however, determined a deficiency of $99,000 in taxpayer's return in relation to the transfer of the $300,000. Upon the Commissioner's rejection of the taxpayer's claim for refund of the assessment paid by him, the present suit against the Collector was filed. The District Court sustained the taxpayer, 51 F. Supp. 120, but was reversed by the Circuit Court of Appeals for the Fifth Circuit, one judge dissenting. 142 F.2d 651. We granted certiorari in connection with Commissioner v. Wemyss, supra, and heard the two cases together. 323 U.S. 686.

This case, unlike the *Wemyss* case, does not come here by way of the Tax Court. No aid can therefore be drawn from a prior determination by the tribunal specially entrusted with tax adjudications. (See Griswold, The Need for a Court of Tax Appeals (1944) 57 Harv. L. Rev. 1153, 1173.) But like the *Wemyss* case, this case turns on the proper application of [§2512(b)]. Taxpayer claims that Miss Desmare's relinquishment of her marital rights constituted "adequate and full consideration in money or money's worth." The Collector, relying on the construction of a like phrase in the estate tax, contends that release of marital rights does not furnish such "adequate and full consideration."

We put to one side the argument that in any event Miss Desmare's contingent interest in her husband's property had too many variables to be reducible to dollars and cents, and that any attempt to translate it into "money's worth" was "mere speculation bearing the delusive appearance of accuracy." Humes v. United States, 276 U.S. 487, 494. We shall go at once to the main issue.

The guiding light is what was said in Estate of Sanford v. Commissioner, 308 U.S. 39, 44: "The gift tax was supplementary to the estate tax. The two are in pari materia and must be construed together." The phrase on the meaning of which decision must largely turn — that is, transfers for other than "an adequate and full consideration in money or money's worth" — came into the gift tax by way of estate tax provisions. It first appeared in the Revenue Act of 1926. Section 303(a)(1) of that Act allowed deductions from the value of the gross estate of claims against the estate to the extent that they were bona fide and incurred "for an adequate and full consideration in money or money's worth." [§2053(c)(1)(A).] It is important to note that the language of previous Acts which made the test "fair consideration" was thus changed after courts had given "fair consideration" an expansive construction.

The first modern estate tax law included in the gross estate transfers in contemplation of, or intended to take effect in possession or enjoyment at, death, except "a bona fide sale for a fair consideration in money or money's worth." §202(b), Revenue Act of 1916. Dower rights and other marital property rights were intended to be included in the gross estate, since they were considered merely an expectation, and in 1918 Congress specifically included them. §402(b), Revenue Act of 1918. This provision was for the purpose of clarifying the existing law. H. Rep. No. 767, 65th Cong., 2d Sess., p. 21. In 1924 Congress limited deductible claims against an estate to those supported by "a fair consideration in money or money's worth," §303(a)(1), Revenue Act of 1924, employing the same standard applied to transfers in contemplation of death, H. Rep. No. 179, 68th Cong., 1st Sess., pp. 28, 66. Similar language was used in the gift tax, first imposed by the 1924 Act, providing, "Where property is sold or exchanged for less than a fair consideration in money or money's worth" the excess shall be deemed a gift.

The two types of tax thus followed a similar course, like problems and purposes being expressed in like language. In this situation, courts held that "fair consideration" included relinquishment of dower rights. Ferguson v. Dickson, 300 F. 961; and see McCaughn v. Carver, 19 F.2d 126; Stubblefield v. United States, 6 F. Supp. 440. Congress was thus led, as we have indicated, to substitute in the 1926 Revenue Act, the words "adequate and full consideration" in order to narrow the scope of tax exemptions. See Taft v. Commissioner, 304 U.S. 351, 356. When the gift tax was re-enacted in the 1932 Revenue Act, the restrictive phrase "adequate and full consideration" as found in the estate tax was taken over by the draftsman.

To be sure, in the 1932 Act Congress specifically provided that relinquishment of marital rights for purposes of the estate tax shall not constitute "consideration in money or money's worth." [§2043(b).] The Committees of Congress reported that if the value of relinquished marital interests "may, in whole or in part, constitute a consideration for an otherwise taxable transfer (as has been held to be so), or an otherwise unallowable deduction from the gross estate, the effect produced amounts to a subversion of the legislative intent. . . ." H. Rep. No. 708, 72d Cong., 1st Sess., p. 47; S. Rep. No. 665, 72d Cong., 1st Sess., p. 50. Plainly, the explicitness was one of cautious redundancy to prevent "subversion of the legislative intent." Without this specific provision, Congress undoubtedly intended the requirement of "adequate and full consideration" to exclude relinquishment of dower and other marital rights with respect to the estate tax. Commissioner v. Bristol, 121 F.2d 129; Sheets v. Commissioner, 95 F.2d 727.

We believe that there is every reason for giving the same words in the gift tax the same reading. Correlation of the gift tax and the estate tax still requires legislative intervention. Commissioner v. Prouty, 115 F.2d 331, 337; Warren, Correlation of Gift and Estate Taxes (1941) 55 Harv. L. Rev. 1; Griswold, A Plan for the Coordination of the Income, Estate and Gift Tax Provisions (1942) 56 Harv. L. Rev. 337. But to interpret the same phrases in the two taxes concerning the same subject matter in different ways where obvious reasons do not compel divergent treatment is to introduce another and needlesss complexity into this already irksome situation. Here strong reasons urge identical construction. To hold otherwise would encourage tax avoidance. Commissioner v. Bristol, supra at 136; 2 Paul, Estate and Gift Taxation (1942) p. 1118. And it would not fulfill the purpose of the gift tax in discouraging family settlements so as to avoid high income surtaxes. H. Rep. No. 708, 72d Cong., 1st Sess., p. 28; S. Rep. No. 665, 72d Cong., 1st Sess., p. 40. There is thus every reason in this case to construe the provisions of both taxes harmoniously. Estate of Sanford v. Commissioner, supra.[1]

Affirmed.

MR. JUSTICE ROBERTS dissents.

MR. JUSTICE REED, dissenting.

This case differs from Commissioner v. Wemyss, ante, p. 303. Whether the transferor of the sums paid for the release of dower and other marital rights, received adequate and full consideration in money and money's worth is a question of fact. The agreement recites that the parties contemplate marriage and provides that the trust shall be set up only in the event of and following the marriage. Petitioner was obligated to create the trust upon consideration of the relinquishment of marital rights and did so, and hence this is not a case involving marriage alone as consideration. Through the tables of mortality, the value of

[1] Treasury Regulations [§25.2512-8] is inapplicable. To find that the transaction was "made in the ordinary course of business" is to attribute to the Treasury a strange use of English.

a survivor's right in a fixed sum receivable at the death of the second party may be adequately calculated. By adopting present value as the accepted future value, the uncertainty inherent in fluctuations of an estate's value is theoretically eliminated. The trial court thus found the present value of the release of the taxpayer's estate from the wife's survivorship rights largely exceeded the amount paid by the taxpayer and that the transactions between the parties were made in good faith for business reasons and not an attempt to evade or avoid taxes. Thus the District Court findings bring this transaction within the express language of the applicable Treasury Regulation [§25.2512-8, relating to transfers in the ordinary course of business]. Its determination, we think, also makes it clear that the husband's estate received practical advantages of value in excess of the cost paid. See Henderson v. Usher, 125 Fla. 709, 727, 170 So. 846.

The question of the taxability as gifts of transfers to spouses in consideration of the release of marital rights had been a matter of dispute in courts before the passage of the Revenue Act of 1932. . . . It seems to us clear that with the judicial history of the difficulties in estate and gifts taxes as to the transfer of marital rights, when Congress expressly provided [in 1932] that relinquishment of dower, curtesy or other statutory estate was not "consideration" for estate tax purposes and left the gift tax provision without such a limitation, it intended that these rights be accorded a different treatment under these sections. . . .

In our views this judgment should be reversed.

The CHIEF JUSTICE and MR. JUSTICE DOUGLAS join in this dissent.

NOTE

1. *Antenuptial settlements.* Was the value of the prospective Mrs. Merrill's right to dower more conjectural than the dissenting justices acknowledge? The district judge's calculation is found in 51 F. Supp. at 120 and is criticized by the Court of Appeals in 142 F.2d at 651.

2. *Income tax aspects.* The relation of antenuptial settlements to income taxation is discussed in Farid-Es-Sultaneh v. Commissioner, supra page 133. Does it follow from that case that Mr. Kresge realized income in 1923 and 1924, because he exchanged the stock for the release of dower, to the extent of the difference between (a) his cost basis for the shares and (b) their value (or the value of the released rights) at the time of the transfer? Should he have paid both an income tax and a gift tax on the transfer?

3. *Freedom as consideration under §2512(b).* Shelton v. Lockhart, 154 F. Supp. 244 (W.D. Mo. 1957), concerned liability for gift tax under the following circumstances: An Osage Indian Princess applied to the Bureau of Indian Affairs for a "certificate of competency" so that property being administered for her by the Bureau could be transferred to her and so that she would be freed from other restrictions imposed on certain Indians. As a condition to granting the certificate, the Bureau required her to transfer $200,000 of the property to be released to her into an irrevocable trust for the benefit of her children. Holding that no gift tax was due, the court suggested that the transfer might be regarded as made for adequate and full consideration under §2512(b), i.e., freedom from the restrictions of the Bureau of Indian Affairs, but that in any event it was part of a business transaction.

COMMISSIONER v. GREENE

119 F.2d 238 (9th Cir. 1941), cert. denied, 314 U.S. 641 (1941)

Before GARRECHT, HANEY, and STEPHENS, Circuit Judges.

HANEY, Circuit Judge.

The Commissioner of Internal Revenue petitions us to review decisions of the Board of Tax Appeals that there were no deficiencies in the taxpayer's gift tax for the years 1936 and 1937.

Alice H. Lester and W. E. Lester were married more than forty years ago. As a result of the marriage two daughters, Carolyn and Beatrice, were born. The former is now about 47 years old, and the latter about 43. More than 30 years ago Alice H. Lester became incompetent and ever since has been and is now confined in an institution for insane persons. Prior thereto, the husband, wife and two daughters lived together as a family unit in luxury and in the manner of people of wealth. After the incompetency of the wife, the husband and two daughters lived together as a family unit until the marriage of Carolyn, and thereafter, the husband and Beatrice continued to live as a family unit until the marriage of Beatrice. Carolyn first married one Hamilton, and in 1930 married Thomas J. Loan who is now her husband. Beatrice in 1932 married one Pauli from whom she was divorced in 1938 and has since been unmarried.

The husband of Alice H. Lester died on May 29, 1933, and left an estate appraised at about $38,000 which was distributed in equal shares to the two daughters and the estate of the incompetent.

The incompetent has always been a person of large financial means. For example, the income from the principal of her estate which is in excess of $2,000,000 was: for 1932 — $121,931; for 1933 — $91,473.85; for 1934 — $88,385.74; for 1935 — $68,468.91; for 1936 — $109,673.53; and for 1937 — $142,614.13.

Loan has never contributed to the support of Carolyn, and Pauli has never contributed to the support of Beatrice. Both daughters were from birth accustomed to a life of ease and luxury, and neither of them was trained for any gainful occupation and neither of them was during any of said times able to engage in any gainful occupation. Since the incompetency of their mother, the only means of support available to them has been the incompetent's estate. Except to the extent of their interest, if any, in the incompetent's estate, the payments received therefrom, and the distributions received from their father's estate, both daughters have been at all times since prior to June 6, 1932, poor persons unable to maintain themselves by work.

From time to time since the inception of the incompetency of the mother, the proper state court has made orders directing the payment of money from the estate to the husband and the two daughters. Prior to the calendar year 1937, such court refused to direct payments except for the maintenance and support of the father and daughters. The amounts ordered to be paid were liberal. Such payments were apparently made pursuant to the following provisions of the California Civil Code and Probate Code, respectively:

> §206. . . . It is the duty of the father, the mother, and the children of any poor person who is unable to maintain himself by work, to maintain such person to the extent of their ability. . . .
>
> §1502. . . . Every guardian of an estate must manage it frugally and without waste, and apply the income, as far as may be necessary, to the comfortable and suitable support, maintenance and education of the ward and his family, if any. . . .

On October 19, 1937, the state court ordered that additional payments be made to the two daughters pursuant to Calif. Probate Code, §1558, as follows:

> On the application of the guardian or next of kin of an insane or incompetent person, the court may direct the guardian to pay and distribute surplus income, not used for the support and maintenance of the ward, or any part of such surplus income, to the next of kin whom the ward would, in the judgment of the court, have aided, if said ward had been of sound mind. The granting of such allowance and the amounts and proportions thereof shall be discretionary with the court, but the court shall give consideration to the amount of surplus income available after due provision has been made for the proper support and maintenance of the ward, to the circumstances and condition of life to which the ward and said next of kin have been accustomed and to the amount

which the ward would, in the judgment of the court, have allowed said next of kin, had said ward been of sound mind. . . .

In the order the court directed that $7,500 be paid to each daughter and found: "That in the judgment of the court, due consideration being given to the amount of said surplus income, the circumstances and condition of life to which said ward and her said children have been accustomed, said ward, if she were of sound mind, would aid said children and would pay and distribute to her said children the portion of the said surplus income which is hereinafter directed to be so distributed."

The $7,500 was in addition to the amounts ordered to be paid for maintenance of the daughters. . . .

Respondent's argument is that Calif. Probate Code, §1502, and Calif. Civil Code, §206, impose obligations upon the incompetent's estate to support the daughters; that the state court's orders were binding on that question; and that the payments were made without donative intent and were not, therefore, gifts. Respondent's argument is based on the theory that state law is applicable. The first question to be decided is whether the state law is applicable.

The rule is that "State law may control only when the federal taxing act, by express language or necessary implication, makes its own operation dependent upon state law." Burnet v. Harmel, 287 U.S. 103, 110. [The court also cited and discussed United States v. Pelzer, infra page 1053, holding that the term "future interests" as used in §2503(b), 1954 Code, was to be defined by federal, rather than state, standards.]

Here, property, i.e., money, was transferred, and pursuant to [§2512(b)], the amount of the gift is "the amount by which the value of the property exceeded the value of the consideration." The only thing in question here is the "consideration." Nothing in the act expressly states that the existence of consideration is to be determined by state law. There is no more reason for saying here that Congress meant consideration as defined by state law, than there was for saying the Congress meant "future interests" as defined by state law.

The committee reports state that the tax imposed by the act "is designed to reach all transfers to the extent that they are donative, and to exclude any consideration not reducible to money or money's worth . . ." Treasury Regulations [§25.2512-8] provides in part: "Transfers reached by the gift tax are not confined to those only which, being without a valuable consideration, accord with the common law concept of gifts. . . . A consideration not reducible to a money value, as love and affection, promise of marriage, etc., is to be wholly disregarded, and the entire value of the property transferred constitutes the amount of the gift."

It is thus apparent that there is nothing to indicate that local law was to determine what might be consideration, but on the contrary, the taxing act considered certain transfers as gifts, whether local law so considered them or not. Since local law is not controlling, it is immaterial what local statutes said, or local courts held. . . .

Respondent's contention that there was no donative intention is immaterial, because [§2512(b)] of the act in question does not require it.

The Board's decisions are reversed and the cause is remanded to the Board for further proceedings in accordance with the views herein expressed.

STEPHENS, Circuit Judge.

I dissent.

The majority opinion holds that all moneys paid out of the incompetent's estate for the support of her adult married daughters are "gifts" and taxable as such.

and holds as immaterial the legal fact that the California Code imposed a legal duty upon her to support her indigent children. This is based upon the theory that "State law may control only when the federal taxing act, by express language or necessary implication, makes its own operation dependent upon state law," citing the recent case of United States v. Pelzer [infra page 1053].

I do not read the *Pelzer* case as authority for the proposition that we are not bound by the State law in the instant case. There the question involved was whether or not the gift under consideration was a gift of a "future interest." It was argued by the taxpayer that the Federal courts were bound by the State law defining what constituted a "future interest." The Supreme Court looked to the committee reports and determined that the purpose of the statute was to make taxable gifts "whether vested or contingent, limited to commence in possession or enjoyment at a future date," and that this was what was meant by the words "future interest" in the taxing statute. The Regulations had defined "future interest" in the same terms. The Court merely held that the provisions of the taxing statute were not subject to state control in this respect.

In the instant case the committee reports state that the tax imposed by the Act "is designed to reach all transfers to the extent that they are donative, and to exclude any consideration not reducible to money or money's worth. . . ." The Regulations promulgated under the Act provide that the tax shall apply to transfers without consideration, and that "a consideration not reducible to a money value, as love and affection, promise of marriage, etc., is to be wholly disregarded."

But this is not to say that a transfer in discharge of a legal obligation imposed by local law is a transfer without consideration under the taxing act. It is my opinion that the discharge of a legal obligation is clearly "consideration" within the meaning of the tax act, and that the statute by necessary implication makes its own operation in that respect dependent upon State law.

It seems clear that under California Civil Code, Section 206, and the cases construing that section, the incompetent at all times material to this controversy was subject to a legally enforceable obligation to support and maintain her daughters, who were, as pointed out by the majority, "poor persons unable to maintain themselves by work" within the meaning of the California law. Section 206 fixes the obligation as "to the extent of [her] ability." Section 1502 of the California Probate Code provides for the support of the family of an incompetent by the application of the income "as far as may be necessary, to the comfortable and suitable support, maintenance and education" of the family. The measure of the support and maintenance allowance was a matter for the discretion of the California Superior Court, sitting in probate, and its determination that the amounts distributed to the incompetent's daughters were necessary for their comfortable and suitable maintenance is binding upon us.

The decision of the Board should be affirmed.

E.T. 19

1946-2 C.B. 166

Advice has been requested concerning the application of the gift tax to transfers made pursuant to an agreement of the parties incident to a proceeding for divorce or legal separation. . . .

In Commissioner v. Wemyss (1945) (324 U.S., 303), the Supreme Court upheld the decision of the Tax Court to the effect that an antenuptial transfer of stock to a prospective bride, a widow, was subject to the gift tax where made pursuant to an agreement to compensate her for the loss of trust income that she would

suffer on remarriage. The Supreme Court approved the reasoning of the Tax Court (a) that marriage was not a consideration reducible to a money value, and (b) that the controlling test is the receipt by the donor of money or money's worth, and not the loss of income or other rights by the donee. . . .

In Merrill v. Fahs (1945) (324 U.S., 308), the taxpayer transferred $300,000 in trust for his prospective bride in consideration of her release of all rights in his assets. The collector in support of his contention that the transfer was a gift relied on the restriction of the phrase "adequate and full consideration in money or money's worth" imposed by [§2043(b)] relating to the estate tax, which provides as follows:

> For the purposes of this chapter, a relinquishment or promised relinquishment of dower, curtesy, or of a statutory estate created in lieu of dower or curtesy, or of other marital rights in the decedent's property or estate, shall not be considered to any extent a consideration "in money or money's worth."

The Supreme Court in holding that the transfer was subject to the gift tax found that Congress intended that the "consideration" or "relinquishment" provision in the estate tax law also applies to the gift tax. . . .

Some indication of the Congressional intent with respect to the above-quoted "relinquishment" clause, which was added to the Internal Revenue Code by the 1932 Revenue Act, is disclosed in the report of the Ways and Means Committee (C.B. 1939-1 (Part 2), 491), reading in part as follows:

> This amendment excludes, in determining "consideration in money or money's worth," the value of a relinquished, or a promised relinquishment of, dower, curtesy, or other marital rights in decedent's property. Section 302(a) and (b) of the 1926 Act require the value of such an interest to be included in the gross estate, and, if its value may, in whole or in part, constitute a consideration for an otherwise taxable transfer (as has been held to be so), or an otherwise unallowable deduction from the gross estate, the effect produced amounts to a subversion of the legislative intent expressed in section 302(a) and (b).
>
> For example, a decedent dies leaving an estate of $1,500,000 (after payment of all charges), and under the State law the surviving spouse is entitled to one-third, or $500,000, of which she can not be deprived by will without her consent. Under existing law, the estate is entitled to no deduction on account of her statutory rights, but, if she and decedent had entered into a contract by which she was to receive from his estate a stated sum in consideration of a waiver of her statutory rights, the amount due her under the contract might be held a deductible claim against the estate as having been contracted for an adequate and full consideration in money's worth, namely, the value of her waived marital rights.

The gift tax is supplementary to the estate tax. It taxes, to a large extent, transfers inter vivos which deplete the estate that the donor would otherwise leave at death. Taxability, therefore, under the gift tax of other than commercial transactions is said to be determined by, and to the extent of, absence of financial benefit to the transferor. (Commissioner v. Wemyss, supra; [§2512(b)]).

Under a decree of divorce or legal separation a husband's duty to support a divorced wife (alimony) customarily lasts only during the joint lives of the parties or until the divorced wife remarries. (Vernier, "American Family Laws," Volume II, 1932 and Supp. 1938.) The fulfillment, therefore, of this obligation by the husband merely amounts to the liquidation of a presently existing obligation, the satisfaction of which does not have the effect of diminishing or depleting the husband's estate to any greater extent than the payment of other existing legal obligations. On the other hand, a transfer to a wife under such a decree in settlement of inheritance rights is a present transfer of what would otherwise constitute a major portion of the husband's estate on death.

The construction spelled out in [§2043(b)], supra, governs the interpretation of the phrase "adequate and full consideration in money or money's worth" as that phrase is used in [§2512(b)] of the Internal Revenue Code. (Merrill v. Fahs, supra.) The consideration for a transfer by way of property settlement other than relinquishment by the wife of her right to support and maintenance is the relinquishment by the wife of her marital rights in the husband's property or estate and falls squarely within the statutory provisions. Section [2043(b)], however, makes no specific reference to support rights. It is the view of the Bureau that the surrender of support rights is not one of the "other marital rights" referred to in the section. The cases of Meyer's Estate v. Helvering (C.C.A. 2, 1940) (110 Fed. (2d), 367, certiorari denied, 310 U.S., 651) and Helvering v. United States Trust Co. et al. (C.C.A. 2, 1940) (111 Fed. (2d), 576) will no longer be followed to the extent that they hold that the right of a divorced wife to support from a former husband during the joint lives of the parties is a marital right in his property or estate.

With respect to transfers made pursuant to legal separation agreements or divorce decrees, it is the position of the Bureau that, for both estate and gift tax purposes, a release of support rights may constitute a consideration in money or money's worth. Accordingly, to the extent that a transfer does not exceed the reasonable value of the support right of the wife it is to be treated as made for an adequate and full consideration in money or money's worth. The question whether the transfer is in excess of reasonable support rights is for the determination of the Bureau. That portion of any transfer which is allocable to the release by the wife of her property or inheritance rights is to be considered as not made "to any extent" for an adequate and full consideration in money or money's worth.*

The establishment of a reasonable allocation is regarded as a proper matter for administrative determination by the Bureau in the absence of a reasonable allocation or segregation by the parties. In making this determination the facts and circumstances of each case will be separately considered. Elements to be considered are the amount of the husband's annual income, the extent of his assets, also, the life expectancies of the parties and the probability of the wife's remarriage, alimony almost universally being limited to such periods. An agreement of the parties may provide for payments extending beyond the period of their joint lives. The required allocation in such a case will involve a determination of the question whether the aggregate amounts paid and payable exceed normal support rights, which ordinarily would terminate upon the death of the husband. The contingency of the wife's remarriage may be measured by actuarial standards. . . .

NOTE

1. *Payments in discharge of support obligations.* E.T. 19 is concerned with transfers under agreements incident to proceedings for divorce or legal separation; presumably the proposition that one does not incur a gift tax liability by supporting his wife or children in an amicable family setting was thought so obvious as not to require an explicit statement. In the case of a united family, however, do amounts paid for support escape the gift tax only to the extent that they constitute "the liquidation of a presently existing obligation" (to use the criterion of E.T. 19) — so that a gift tax is due if the family is maintained at a level above the husband's legal obligation and, a fortiori, if they live beyond their means? Is the cost of food, clothing, and shelter exempt no matter

* This part of E.T. 19 was subsequently modified, as a result of Harris v. Commissioner, infra page 1036. See Rev. Rul. 60-160, 1960-1 C.B. 374. — Ed.

how luxurious? What about jewelry, fur coats, vacation trips, education, and the use of summer homes and yachts?

The $3000 annual per-donee exclusion was enacted to make it unnecessary to report small gifts, as well as wedding and Christmas gifts. S. Rept. No. 665, 72d Cong., 1st Sess., reprinted in 1939-1 C.B. (Part 2) 496, 524. Does this imply that wedding, birthday, and Christmas gifts to the donor's spouse and minor children are taxable gifts (to the extent they exceed the exclusion) or can a station-in-life concept of support be invoked to avoid a gift tax if the gift (e.g., a Jaguar, chinchilla wrap, or diamond brooch) is no more than is expected in the donor's environment?

Does E.T. 19 relinquish gift tax liability if the transfer discharges a support obligation under local law, no matter how far it may enlarge the concept of "support"? In a number of jurisdictions, a parent is legally required to support an incompetent adult child, either by statute or by the common law. See Annotation, Parent's Obligation to Support Adult Child, 1 A.L.R.2d 910. What if the parent's duty were expanded to include a college and professional education for an adult child? An obligation to support him (and his wife and children, if any) while he gets established in his occupation and until he is self-supporting?

For some income tax aspects of "support," see page 338 supra (dependency exemption) and page 371 supra (support trusts); for the estate tax aspects, see page 1188 infra.

2. *Relation of support obligation to Holtz's Estate v. Commissioner.* Could the result in E.T. 19 have been reached via the route traversed in Holtz's Estate v. Commissioner: no gift where the transferred property is to be used to benefit the transferor? If, under local law, the obligation to support one's wife or children is diminished to the extent that they have independent resources, would the reasoning of *Holtz's Estate* relieve the settlor of gift tax liability on a trust under which the income was to go to his wife or children, even though it was not explicitly earmarked for support?

3. *Implications of reference to "property" in §2501(a).* Since the gift tax is imposed on the transfer of "property" by gift, §2501(a), is the use of the taxpayer's facilities (his residence, hotel suite, yacht, etc.) tax-free even if it exceeds his legal obligation of support? Even if the guest is someone whom he is not required to support, like a collateral relative or friend? Is there a distinction between (a) allowing a collateral relative or friend to occupy one's residence, (b) paying his rent or buying a residence for him to occupy, and (c) giving him money to enable him to buy or rent a place of his own? Does a father make a taxable gift by paying his son's law school tuition, setting him up in business, or taking him on a trip around the world, if such expenditures are beyond his legal obligation to support the son? Does the answer depend on whether he would be willing to give the son the same amount in cash without earmarking it for a special purpose? On whether the father is bribing the son to do something distasteful to him, or simply responding to the son's suggestion?

4. *Payment of wife's income tax liability.* If husband and wife file a joint income tax, their liability for the tax is joint and several (supra p. 335). According to Regs. §25.2511-1(d), the payment of the entire liability by one spouse is not a transfer for gift tax purposes. Why not, at least when the entire liability is paid by a spouse who earned only part of the income?

5. *Transfers by third persons.* If John Jones, Sr., establishes a trust for the support of John Jones, III, has he made a gift to John Jones, III, or to John Jones, Jr., whose duty to support the ostensible beneficiary of the trust may be reduced by the donor's generosity? Is there any need to identify the donee in order to compute the donor's tax liability?

6. *Reference.* Note, Federal Tax Aspects of the Obligation to Support, 74 Harv. L. Rev. 1191, 1213-1217 (1961).

HARRIS v. COMMISSIONER

340 U.S. 106 (1950)

MR. JUSTICE DOUGLAS delivered the opinion of the Court.

The federal estate tax and the federal gift tax, as held in a line of cases ending with Commissioner v. Wemyss, 324 U.S. 303, and Merrill v. Fahs, 324 U.S. 308,

are construed in pari materia, since the purpose of the gift tax is to complement the estate tax by preventing tax-free depletion of the transferor's estate during his lifetime. Both the gift tax [§2512(b)] and the estate tax [§2053(c)(1)(A)] exclude transfers made for "an adequate and full consideration in money or money's worth." In the estate tax this requirement is limited to deductions for claims based upon "a promise or agreement"; but the consideration for the "promise or agreement" may not be the release of marital rights in the decedent's property [§2043(b)]. In the *Wemyss* and *Merrill* cases the question was whether the gift tax was applicable to premarital property settlements. If the standards of the estate tax were to be applied ex proprio vigore in gift tax cases, those transfers would be taxable because there was a "promise or agreement" touching marital rights in property. We sustained the tax, thus giving "adequate and full consideration in money or money's worth" the same meaning under both statutes insofar as premarital property settlements or agreements are concerned.

The present case raises the question whether *Wemyss* and *Merrill* require the imposition of the gift tax in the type of post-nuptial settlement of property rights involved here.

Petitioner divorced her husband, Reginald Wright, in Nevada in 1943. Both she and her husband had substantial property interests. They reached an understanding as respects the unscrambling of those interests, the settlement of all litigated claims to the separate properties, the assumption of obligations, and the transfer of properties.

Wright received from petitioner the creation of a trust for his lifetime of the income from her remainder interest in a then existing trust; an assumption by her of an indebtedness of his of $47,650; and her promise to pay him $416.66 a month for ten years.

Petitioner received from Wright 21/90 of certain real property in controversy; a discontinuance of a partition suit then pending; an indemnification from and assumption by him of all liability on a bond and mortgage on certain real property in London, England; and an indemnification against liability in connection with certain real property in the agreement. It was found that the value of the property transferred to Wright exceeded that received by petitioner by $107,150. The Commissioner assessed a gift tax on the theory that any rights which Wright might have given up by entering into the agreement could not be adequate and full consideration.

If the parties had without more gone ahead and voluntarily unravelled their business interests on the basis of this compromise, there would be no question but what the gift tax would be payable. For there would have been a "promise or agreement" that effected a relinquishment of marital rights in property. It therefore would fall under the ban of the provision of the estate tax which by judicial construction has been incorporated into the gift tax statue.

But the parties did not simply undertake a voluntary contractual division of their property interests. They were faced with the fact that Nevada law not only authorized but instructed the divorce court to decree a just and equitable disposition of both the community and the separate property of the parties.[1] The agreement recited that it was executed in order to effect a settlement of the respective property rights of the parties "in the event a divorce should be de-

[1] At the time of the divorce Nevada Compiled Laws, §9463 provided: "In granting a divorce the court may award such alimony to the wife and shall make such a disposition of the community and separate property of the parties as shall appear just and equitable, having regard to the respective merits of the parties and to the condition in which they will be left by such divorce, and to the party through whom the property was acquired, and to the burdens, if any, imposed upon it for the benefit of the children. . . ."

creed"; and it provided that the agreement should be submitted to the divorce court "for its approval." It went on to say, "It is of the essence of this agreement that the settlement herein provided for shall not become operative in any manner nor shall any of the recitals or covenants herein become binding upon either party unless a decree of absolute divorce between the parties shall be entered in the pending Nevada action."

If the agreement had stopped there and were in fact submitted to the court, it is clear that the gift tax would not be applicable. That arrangement would not be a "promise or agreement" in the statutory sense. It would be wholly conditional upon the entry of the decree; the divorce court might or might not accept the provisions of the arrangement as the measure of the respective obligations; it might indeed add to or subtract from them. The decree, not the arrangement submitted to the court, would fix the rights and obligations of the parties. That was the theory of Commissioner v. Maresi, 156 F.2d 929, and we think it sound.

Even the Commissioner concedes that that result would be correct in case the property settlement was litigated in the divorce action. That was what happened in Commissioner v. Converse, 163 F.2d 131, where the divorce court decreed a lump sum award in lieu of monthly payments provided by the separation agreement. Yet without the decree there would be no enforceable, existing agreement whether the settlement was litigated or unlitigated. Both require the approval of the court before an obligation arises. The happenstance that the divorce court might approve the entire settlement, or modify it in unsubstantial details, or work out material changes seems to us unimportant. In each case it is the decree that creates the rights and the duties; and a decree is not a "promise or agreement" in any sense — popular or statutory.

But the present case is distinguished by reason of a further provision in the undertaking and in the decree. The former provided that "the covenants in this agreement shall survive any decree of divorce which may be entered." And the decree stated "It is ordered that said agreement and said trust agreements forming a part thereof shall survive this decreee." The Court of Appeals turned the case on those provisions. It concluded that since there were two sanctions for the payments and transfers — contempt under the divorce decree and execution under the contract — they were founded not only on the decree but upon both the decree and a "promise or agreement." It therefore held the excess of the value of the property which petitioner gave her husband over what he gave her to be taxable as a gift. 178 F.2d 861.

We, however, think that the gift tax statute is concerned with the source of rights, not with the manner in which rights at some distant time may be enforced. Remedies for enforcement will vary from state to state. It is "the transfer" of the property with which the gift tax statute is concerned, not the sanctions which the law supplies to enforce transfers. If "the transfer" of marital rights in property is effected by the parties, it is pursuant to a "promise or agreement" in the meaning of the statute. If "the transfer" is effected by court decree, no "promise or agreement" of the parties is the operative fact. In no realistic sense is a court decree a "promise or agreement" between the parties to a litigation. If finer, more legalistic lines are to be drawn, Congress must do it.

If, as we hold, the case is free from any "promise or agreement" concerning marital rights in property, it presents no remaining problems of difficulty. The Treasury Regulations [§25.2512-8] recognize as tax free "a sale, exchange, or other transfer of property made in the ordinary course of business (a transaction which is bona fide, at arm's length, and free from donative intent)." This transaction is not "in the ordinary course of business" in any conventional sense. Few

transactions between husband and wife ever would be; and those under the aegis of a divorce court are not. But if two partners on dissolution of the firm entered into a transaction of this character or if chancery did it for them, there would seem to be no doubt that the unscrambling of the business interests would satisfy the spirit of the Regulations. No reason is apparent why husband and wife should be under a heavier handicap absent a statute which brings all marital property settlements under the gift tax. . . .

Reversed.

MR. JUSTICE FRANKFURTER, whom MR. JUSTICE BLACK, MR. JUSTICE BURTON, and MR. JUSTICE MINTON join, dissenting.

Section [§2512(b)] imposes a gift tax on property "transferred for less than an adequate and full consideration in money or money's worth." In Merrill v. Fahs, 324 U.S. 308, the Court held that an antenuptial settlement is subject to this tax. Believing as I do that the disposition of the case before us largely depends on the weight given to the considerations which there prevailed, recapitulation of them is appropriate. The Court there based its result on the conclusion that a transfer of property pursuant to an antenuptial settlement was not made in exchange for an "adequate and full consideration in money or money's worth." This conclusion was reinforced by reading into the gift tax provision the gloss of the interrelated estate tax of the same year that the relinquishment of "marital rights . . . shall not be considered to any extent a consideration 'in money or money's worth.' "

The case before us concerns not an antenuptial agreement, but what the Tax Court called a "property settlement agreement," contracted in anticipation of divorce. Each spouse transferred property of substantial value to the other and each agreed "to release completely the property of the other from all claims arising out of their marriage." 10 T.C. 741, 743.

Unless we are now to say that a settlement of property in winding up, as it were, a marriage, smacks more of a business arrangement than an antenuptial agreement and therefore satisfies the requirement of "an adequate and full consideration in money or money's worth" which we found wanting in Merrill v. Fahs, and unless we are further to overrule Merrill v. Fahs insofar as it joined the gift tax and the estate tax of the Revenue Act of 1932, so as to infuse into the gift tax the explicitness of the estate tax in precluding the surrender of marital rights from being deemed to any extent a consideration "in money or money's worth," we must hold that a settlement of property surrendering marital rights in anticipation of divorce is not made for "an adequate and full consideration in money or money's worth."

The same year that it enacted the gift tax Congress amended the estate tax by adding to the provision that "adequate and full consideration" was prerequisite to deduction of "claims against the estate" the phrase, "when founded upon a promise or agreement." [§2053(c)(1)(A)]. Legislative history demonstrates that this amendment was intended, not to change the law, but to make clear that the requirement of consideration did not prevent "deduction of liabilities imposed by law or arising out of torts." H.R. Rep. No. 708, 72d Cong., 1st Sess. 48; S. Rep. No. 665, 72d Cong., 1st Sess. 51. A similar principle is implicit in the gift tax. By its statutory language and authoritative commentaries thereon Congress did not leave the incidence of the gift tax at large by entrusting its application to the play of subtleties necessary to finding a "donative intent." Commissioner v. Wemyss, 324 U.S. 303, 306. But while by the gift tax Congress meant "to hit all the protean arrangements which the wit of man can devise that are not business transactions" to the common understanding, Commissioner v. Wemyss, ibid., a gift tax is an exaction which does presuppose the voluntary transfer of property and not a

transfer in obedience to law. In Merrill v. Fahs, supra, at 313, we stated that "to interpret the same phrase in the two taxes concerning the same subject matter in different ways where obvious reasons do not compel divergent treatment is to introduce another and needless complexity into this already irksome situation." Application of that principle would require the Court to hold that [§2512(b)] imposes a tax on "the amount by which the value of the property [transferred exceeds] the value of the consideration" received only when the transfer is "founded upon a promise or agreement." The taxpayer does not contest applicability of the principle; and in the view we take of the case it may be assumed.[2] Taxpayer contends (1) that the transfers in the situation now before us were or must be deemed to have been for an "adequate and full consideration in money or money's worth," and (2) that the Commissioner imposed a liability which was not "founded upon a promise or agreement." Her position was sustained by the Tax Court, 10 T.C. 741, but rejected by the Court of Appeals for the Second Circuit. 178 F.2d 861.

1. I would adhere to the views we expressed in the *Wemyss* and *Merrill* decisions as to the meaning to be given to the requirement of "adequate and full consideration" in the enforcement of the gift tax "in order to narrow the scope of tax exemptions." 324 U.S. at 312. Nor would I depart from the conclusion there reached that the relinquishment of marital rights is not to be deemed "money or money's worth" because that definition in the estate tax of 1932 is by implication to be read into the gift tax passed in the same year.

2. But was the transfer of the property here in controversy "founded upon a promise or agreement?" The answer requires recital of the governing facts of the case.

Taxpayer separated from her husband in August, 1942, and shortly thereafter brought suit in Nevada for divorce. One week prior to entry of the divorce decree, she and her husband entered into an agreement "for the purpose of settling the respective property rights of the parties hereto and of removing the subject matter thereof from the field of litigation." After providing for the transfers of property and the release of claims, the agreement recited,

> This agreement shall be submitted to the court for its approval, but nevertheless the covenants in this agreement shall survive any decree of divorce which may be entered. It is of the essence of this agreement that the settlement herein provided for shall not become operative in any manner nor shall any of the Recitals or covenants herein become binding upon either party unless a decree of absolute divorce between the parties shall be entered in the pending Nevada action. The settlement herein provided shall become immediately effective and operative in the event of and upon the entry of a decree of divorce between said parties in said pending Nevada action. The parties hereto, however, shall proceed as expeditiously as possible to carry into effect the covenants herein, which it is provided are to be performed by either of the parties prior to the entry of the decree as aforesaid.

After a hearing at which both parties were represented, the court granted the divorce. It found that certain transfers from the wife to the husband were "in discharge of a legal obligation which, because of the marital relationship has been imposed" on her; and concluded that "the agreement and trust agreements forming a part thereof, made and entered into between plaintiff and defendant under date of February 27th, 1943 is entitled to be approved." The divorce

[2] We therefore need not pass on the suggestion in the Government's brief that the estate and gift tax provisions should not in this instance be read in pari materia because the interpretation of a phrase common to the two statutes is not involved. Nor do we pass on the contention that under both gift and estate taxes liability is imposed on transfers and claims resulting from loss of marital rights even when no promise or agreement is involved.

decree "approved" the agreement, directed performance of two of its paragraphs, and declared,

> Notwithstanding the approval of said agreement and the trust agreements forming a part thereof by the Court herein, it is ordered that said agreement and said trust agreements forming a part thereof shall survive this decree. . . .
>
> It is further ordered, adjudged and decreed that the decree herein entered is absolute and final in all respects and the Court herein divests itself of all power to amend or modify the same in the future without the consent of both of the parties hereto.

The parties executed the provisions of the decree and the agreement, and the Commissioner assessed the tax in question on the amount by which the value of the property transferred by the wife to her husband exceeded the value of the property transferred by him to her.

3. Such being the facts of the case, was the transfer by Cornelia Harris "founded upon a promise or agreement?" The statute does not say founded "solely upon a promise or agreement." The statute does not say that the tax should not fall on "property transferred under the terms of a judgment or decree of the court." Nor is the phrase "founded upon agreement" a technical term having a well-known meaning either in law or in literature. The question really is whether the transfer made by the taxpayer to her husband was, within the fair meaning of the language, "founded" upon her agreement with her husband. Did the Nevada judge in decreeing the divorce describe what actually took place here when he said that on the "date of February 27, 1943, the plaintiff and defendant entered into an agreement and trust agreements forming a part thereof, under the terms of which the parties settled all obligations arising out of their marriage?"

The fact that undertakings defined by this agreement would come into force only on the occurrence of a condition, to wit, the entering of a decree of divorce, is apparently regarded as decisive of taxability. But does this make any real difference? The terms of that decree might be different from the terms of the agreement; but "nevertheless the covenants in this agreement shall survive any decree of divorce which may be entered." If the divorce court had disapproved the agreement and had not decreed the transfer of any property of the wife to her husband, it is difficult to see how transfers which she made, solely because of the compulsion of the agreement, would be effected by court decree and for that reason not subject to tax. The condition on which an agreement comes into force does not supplant an agreement any more than a deed in escrow ceases to be a deed when it comes out of escrow. In the *Wemyss* and *Merrill* cases would the gifts have been any the less founded upon an agreement if, as a condition to the antenuptial arrangements in those cases, the consent of the parents of the financée had been made a condition of the marriage? Nor can excluding the transfers here involved from the gift tax be made tenable by resting decision on the narrower ground that to the extent the divorce decree "approved" the agreement or embodied its provisions so as to make them enforceable by contempt the transfers were not "founded upon" the agreement within the meaning of the statute.[3] If the taxpayer had been sued by her husband for the

[3] The ground adopted for reversal of the court below is important to the disposition of the case. On the broader ground apparently employed, no gift tax is due. But if the narrower basis be used, it is probable that some liability should be imposed. One of the transfers required by the agreement — the wife's assumption of a $47,650 indebtedness of her husband — was not incorporated into the divorce decree and therefore is presumably enforceable only under the contract. If enforceability under the decree is the criterion, a gift tax is due to the extent this indebtedness is reflected in the amount determined by the Commissioner to represent the value attributable to release of marital rights.

sums she was obligated to transfer to him could he not have brought the suit on the contract? [4] Even though a promise for which inadequate consideration was given has been reduced to a judgment, a claim based upon it has been held not deductible from the gross estate and thus must have been deemed to be "founded upon a promise." Markwell's Estate v. Commissioner, 112 F.2d 253. If a transfer does not cease to be "founded upon a promise" when the promise is merged into a judgment, is not a transfer pursuant to an agreement which survives a ratifying decree a fortiori "founded upon" that agreement?

Judge Learned Hand's treatment of this matter is so hard-headed and convincing that it would be idle to paraphrase his views.

> In some jurisdictions contracts, made in anticipation of a divorce, are held to persist ex proprio vigore after the divorce decree has incorporated their terms, and has added its sanctions to those available in contract. That, for example, is the law of New York, where the contract remains obligatory even after the court has modified the allowances which it originally adopted; and where the promises will be thereafter enforced by execution and the like. Perhaps, that is also the law of Nevada, which the parties provided should govern "all matters affecting the interpretation of this agreement or the rights of the parties." Be that as it may, in the case at bar, the Nevada decree having declared that the agreement was "entitled to be approved," that included the provision that its "covenants" should "survive" as well as any of its other stipulations. Thus the payments made under it were "founded" as much upon the "promise or agreement" as upon the decree; indeed, they were "founded" upon both; the parties chose to submit themselves to two sanctions — contempt under the divorce court and execution under the contract. The payments were therefore subject to the gift tax. 178 F.2d 861, 865.

I would affirm the judgment.

ROSENTHAL v. COMMISSIONER
205 F.2d 505 (2d Cir. 1953)

Before AUGUSTUS N. HAND, CHASE, and CLARK, Circuit Judges.

CLARK, Circuit judge.

The taxpayer, Paul Rosenthal, petitions for review of a decision of Judge Disney in the Tax Court, reviewed by the entire court, 17 T.C. 1047, in so far as it determines a deficiency of $16,983.17 in his gift tax for 1946 and rejects his claim of overpayment of that tax in the amount of $160,212. In the same decision the court found a deficiency of $23,194.37 in Rosenthal's gift tax for 1944, but neither party has petitioned for review of this portion of the decision. At issue here is the taxability of certain obligations undertaken by Rosenthal toward his children in connection with his separation and subsequent divorce from his estranged wife. The basic facts were found by the court as stipulated by the parties and are not in dispute.

On July 26, 1944, Rosenthal entered into a separation agreement with his wife

---

[4] In none of the twelve jurisdictions in which decisions in point have been found has it been held that a suit could not be brought on the contract in a situation like that before us. In four States actions may apparently be brought subsequent to divorce on prior separation agreements which are construed to contemplate survival even though the divorce decree directs different payments than the agreement. . . . In three States such suits may be brought at least where the decree is not inconsistent with the agreement and does not indicate an intention to terminate it. . . . In five others it appears that actions on the contract will lie except when the agreement is recited in the decree so as to be enforceable by contempt; but in none of the cases refusing to permit a suit on the contract did the decree or the agreement direct survival. . . . Schacht v. Schacht, 295 N.Y. 439, relied on by petitioner, held only that a determination by the divorce court of the fairness of a separation agreement was res judicata in a subsequent suit to set the agreement aside for fraud. The issue does not appear to have been determined in Nevada, where the agreement here involved was made and the divorce entered.

which contained a series of provisions for the education, care, support, and maintenance of their two children, Jill, then 20 years old, and Sue, aged 14. In these the taxpayer undertook: (1) To pay his wife for the benefit of the children $10,000 per annum for each daughter until she reaches the age of 21 or marries or until the wife dies; (2) To pay each child during her lifetime after she becomes 21 or marries, the sum of $8,000 annually until the death of the wife and $6,250 annually thereafter; and, if Rosenthal's mother dies during his lifetime, (3) To set up a trust for each child then living in the amount of $150,000, the income to be payable to the child for life, and upon her death the principal payable to her issue then living or, in default of issue, as the child may by will appoint, and (4) To pay to each of the children (or to the wife for the benefit of a minor child) an additional $3,000 annually until the death of the child or of the wife. The separation agreement also provided that, in the event of divorce, it should become a part of the decree or be considered "an agreement incident to such divorce"; its effectiveness, however, was not conditioned on the occurrence of a divorce. On September 18, 1944, taxpayer's wife did secure a Nevada divorce, and the July 26 agreement was expressly adopted by the court and made a part of its decree. The value of the taxpayer's obligations toward his children assumed in that agreement, as of both July 26 and September 18, 1944, was stipulated between the Commissioner and the taxpayer to be $499,340.98.

In 1945, Rosenthal sought to amend the separation agreement to translate so far as possible the annual payments due the children into one funded payment. The obligation to create trusts for them had already matured, since Rosenthal's mother died on November 19, 1944; and on May 14, 1945, the elder daughter, Jill, had reached the age of 21. Attorneys on both sides conducted the negotiations with the assistance of an accountant who calculated the value of taxpayer's existing obligation to make annual payments to both daughters, as of October 1, 1945, to be $357,000 under the Actuary's or Combined Experience Table of Mortality with interest at 4 per cent — the table then used by the Commissioner — or $453,000 under the Combined Annuity Mortality Table with interest at 3½ per cent, which the accountant regarded as "a more commercial table." Adding to these figures the obligation to create trusts at a face value of $300,000, the alternative computations of the worth of taxpayer's commitments become $657,000 or $753,000. The parties sought to retain the fair equivalent of these undertakings and ultimately reached agreement on what they considered a suitable modification on March 15, 1946. In lieu of the payments prescribed by the earlier agreement, the taxpayer was to establish on April 1, 1946, a trust for each daughter in the amount of $312,500, and to pay each during her lifetime $3,000 annually until the death of the wife and $1,500 annually thereafter. He also agreed to pay each child $5,021.33 as her "share of the income earned and allocable to the trusts provided for" in the original agreement. To differ from that agreement, these provisions were to become effective only upon appropriate amendment of the divorce decree, which was promptly ordered by the Nevada court on March 29, 1946. The total obligation assumed by the taxpayer under the new agreement was valued by the Commissioner at $729,737.67.

From 1944 through the first quarter of 1946, the taxpayer made all the direct payments called for by the original agreement, but did not actually set up the trusts upon the death of his mother. Taking the position that a gift tax became due only as non-exempt payments were made, he did not report any gifts to the children in 1944, since they were then both minors whom he was under an obligation to support; in 1945, however, he reported the payments made to Jill after she became 21. The payment — in the amount of $2,750 — made to Jill for the first three months of 1946 under the old agreement was likewise reported. In

addition, the taxpayer reported in his 1946 return payments made during that year under the new agreement amounting to $637,292.66.[1] A gift tax of $160,212 was paid on the $640,042.66 total of 1946 payments.

The Commissioner determined that the taxpayer should have included in his taxable gifts for 1946 the actuarial value in that year of the future annual payments to be made to both daughters under the revised agreement. In his notice of deficiency, the Commissioner valued the payments due Jill at $45,215.91, and those due Sue at $45,979.10. Accordingly, he added $91,195.01 to the taxable gifts and deducted therefrom $1,500[2] for the 1946 payments to Jill already reported. A deficiency of $39,848.36 was consequently assessed.

Seeking redetermination of this assessment in the Tax Court, the taxpayer contended not only that there was no additional tax due for 1946, but that he was entitled to refund of the $160,212 in taxes already paid, since none of the 1946 payments were properly taxable in that year. Two separate arguments were made in support of this claim. First, taxpayer contended that the 1946 agreement giving rise to these payments was made for an adequate and full consideration, namely, surrender of the children's rights under the 1944 agreement. Second, he argued that, since the 1946 agreement became effective only upon amendment of the divorce decree, payments thereunder were in discharge of a decretal obligation, and hence not taxable gifts. In addition to vigorously disputing both these contentions, the Commissioner countered on the first with the argument that, if the gifts made to the children were not taxable in 1946, a gift tax should have been paid on them in 1944 when the original agreement was executed. Since the taxpayer's 1944 gift tax return was also before the Tax Court in connection with the tax due on payments to his wife under the same 1944 agreement, the Commissioner maintained that adoption of taxpayer's first contention should result simply in a corresponding increase in his 1944 gift tax deficiency.

The Tax Court, however, deemed it unnecessary to examine this theory, for it rejected the taxpayer's two principal arguments in a comprehensive opinion by Disney, J., reviewed by the court. But it did agree with the taxpayer on the subsidiary point that the present worth in 1946 of the payments to be made to the younger daughter, Sue, during her minority, to the extent of $10,000 per annum, should not be included as taxable gifts, since these were in discharge of taxpayer's obligation to support his minor child. The 1946 gift tax deficiency was therefore reduced to $16,983.17, and this is the decision for which review is sought here by the taxpayer. The remaining part of the decision, for which neither party has sought review, is not immediately relevant here, since it determined a deficiency of $23,194.37 in the taxpayer's 1944 gift tax on the payments to his wife in that year.

The two principal contentions pressed by the taxpayer in the Tax Court also form the mainstay of his argument here; certain additional subsidiary claims not raised below will be discussed later. We may consider at the outset his interesting argument that his 1946 undertakings to make payments to or for the benefit of his children were wholly immunized from gift taxation because effective only upon incorporation into the divorce decree. For this proposition he relies chiefly on Harris v. C.I.R., 340 U.S. 106, which held a settlement of marital property rights between husband and wife, operative by its terms only on entry of a divorce

1 This figure comprises $625,000 for the two trusts set up under the 1946 agreement, plus the direct payment of $2,250 to Jill under that agreement, and also includes the $10,042.66 paid both children as their "share of the income earned and allocable to the trusts" provided for in the 1944 agreement.

2 As mentioned above and discussed later in this opinion, this figure should have been $2,250.

decree, to be exempt from gift taxes. The basis for this decision was the Court's holding that the settlement was founded not on a voluntary promise or agreement, but on the command of the divorce court, instructed by state law to decree a just and equitable disposition of the parties' property. Hence the arrangement was deemed in effect to be for "an adequate and full consideration in money or money's worth," [§2512(b)], the Court analogizing it to a transaction "in the ordinary course of business" which, under [Regs. §25.2512-8], satisfies the statutory requirement of a consideration to support the tax exemption. See also C.I.R. v. Converse, 2 Cir., 163 F.2d 131, 174 A.L.R. 199.

The rationale of both the *Harris* and *Converse* decisions rests basically on the divorce court's power, if not duty, to settle property rights as between the parties, either by adopting their own agreement as in the *Harris* case, or by having the matter litigated as in the *Converse* case. We do not find this rationale applicable to a decree ordering payments to adult offspring of the parties or to minors beyond their needs for support — the only payments with which we are now concerned, since that part of the taxpayer's undertakings necessary for the support of his children during their minority is concededly not taxable. See Helvering v. U.S. Trust Co., 2 Cir., 111 F.2d 576, certiorari denied U.S. Trust Co. of New York v. C.I.R., 311 U.S. 678, C.I.R. v. Weiser, 10 Cir., 113 F.2d 486. While neither the Nevada statute, Nev. Comp. Laws §§9462, 9463 (Supp. 1931-1941), nor interpretive decisions indicate the precise limits of the divorce court's authority in this area, courts of other jurisdictions operating under similar statutes have been restricted in their power to make awards of property to children to amounts appropriate merely for the maintenance of minor children. . . . Awards to children beyond their needs for support during minority have been held enforceable where based upon a contractual agreement between the parties to the divorce. . . . That is the situation here. But since such a decree provision depends for its validity wholly upon the consent of the party to be charged with the obligation and thus cannot be the product of litigation in the divorce court, we do not consider the rationale of the *Harris* decision applicable to the present case. We therefore conclude that the arrangements here made for the taxpayer's daughters beyond their support during minority do not obtain exemption from the federal gift tax by simply receiving the court's imprimatur. The similar result reached in Hooker v. C.I.R., 5 Cir., 174 F.2d 863, and Converse v. C.I.R., 5 T.C. 1014, affirmed C.I.R. v. Converse, supra, appears to us a correct interpretation of the law and not in conflict with the more recent decision in the *Harris* case.

This brings us to the question when the obligation undertaken by the taxpayer became taxable and whether there was in 1946 adequate and full consideration for the promises made in that year so as to take them out of the category of taxable gifts. In Harris v. C.I.R., 2 Cir., 178 F.2d 861, reversed on other grounds, 340 U.S. 106, we held that a binding promise to make a gift becomes subject to gift taxation in the year the obligation is undertaken and not when the discharging payments are made. The Seventh Circuit followed our decision on this point in C.I.R. v. Copley's Estate, 7 Cir., 194 F.2d 364. This view of the law was likewise adopted by the Commissioner and the Tax Court in the instant case in determining that a gift tax was due in 1946 on the then value of the future annual payments to be made to the taxpayer's daughters under the 1946 revised agreement. The Commissioner refused, however, to accord similar treatment to the promises made in 1944 — and hence to view their surrender as consideration for the 1946 undertakings — because part of the taxpayer's 1944 commitment was contingent on the death of his mother during his lifetime. With this we cannot agree. The obligation undertaken by the taxpayer in the 1944 agreement, which

was irrevocable without consent of the wife and the daughter affected once she became of age, at all times had an ascertainable value, since the stipulated contingency was susceptible to actuarial appraisal, even though it might conceivably never have come about. Robinette v. Helvering, 318 U.S. 184; see also C.I.R. v. Maresi, 2 Cir., 156 F.2d 929. The Commissioner indeed implicitly conceded this point when he stipulated the value of the taxpayer's obligation to his children under the 1944 agreement at the time of execution at $499,340.98. The possibility of valuation by actuarial tables distinguishes the present case from City Bank Farmers Trust Co. v. Hoey, 2 Cir., 101 F.2d 9, holding that payments made pursuant to court orders were taxable when made, since the court's orders were subject to modification at any time. See Harris v. C.I.R., supra, 178 F.2d at page 865. Thus the taxpayer's original promise here was taxable in 1944, and its surrender by the children in 1946 clearly constituted a valuable consideration for the new promise he then made.

Whether release of the 1944 obligation constituted "adequate and full consideration in money or money's worth" so as completely to exempt the 1946 promise from gift taxation under [§2512(b)], is of course another question. Treas. Reg. [§25.2512-8], referred to above, provides that "a sale, exchange, or other transfer of property made in the ordinary course of business (a transaction which is bona fide, at arm's length, and free from any donative intent), will be considered as made for an adequate and full consideration in money or money's worth." The Supreme Court's observations on this provision in the *Harris* case, 340 U.S. at page 112, are equally apposite here: "This transaction is not 'in the ordinary course of business' in any conventional sense. Few transactions between husband and wife ever would be; and those under the aegis of a divorce court are not. But if two partners on dissolution of the firm entered into a transaction of this character or if chancery did it for them, there would seem to be no doubt that the unscrambling of the business interests would satisfy the spirit of the Regulations. No reason is apparent why husband and wife should be under a heavier handicap absent a statute which brings all marital property settlements under the gift tax." We infer from this statement that even a family transaction may for gift tax purposes be treated as one "in the ordinary course of business" as defined in this Regulation if each of the parenthetical criteria is fully met.

C.I.R. v. Wemyss, 324 U.S. 303, suggests no contrary rule. It holds merely that the absence of donative intent as known to the common law will not alone prevent a transfer from being subject to gift taxation. . . . The Court noted in the *Wemyss* case, 324 U.S. at page 307, that the Tax Court had there in effect found that the transfer "was not made at arm's length in the ordinary course of business." In the instant case the Tax Court made no findings — express or even clearly implied — as to whether the surrender of the 1944 promise for the new 1946 obligation was a bona fide arm's length transaction without donative intent on the taxpayer's part. . . . The case must therefore be remanded to the Tax Court for determination of this question. If the court then finds that the 1946 agreement does represent the fruits of a bona fide arm's length transaction without donative intent, the 1946 deficiency will of course be expunged in toto and the taxpayer's refund claim allowed.

If, however, consideration of the criteria stated in the Regulation leads the court to the conclusion that there was here no transfer in the ordinary course of business as thus defined, it should proceed to determine the extent to which surrender of the children's rights under the 1944 agreement did constitute consideration for the taxpayer's 1946 undertaking. A gift tax is due only on the difference between this amount and the value of the new promise. [§2512(b)]. The Tax Court did not consider this issue when the case was originally before it because

the court believed that the taxpayer did "not suggest that there was some consideration but less than full and adequate." This seems to us too technical and restrictive a view of the argument presented to the court. Excerpts from that argument indicate that, while the taxpayer's main thrust was naturally enough to establish that there was no tax whatever due on the 1946 promise, he did not foreclose the alternative possibility of reduced tax liability because there was some consideration, though less than "adequate and full."

The taxpayer presents two final objections to the Tax Court's dispositon of this case. The first deals with the court's valuation of the younger daughter's right to support during her minority. In the Tax Court, taxpayer successfully contended that this non-taxable portion of his obligation should be valued at the actuarial worth of the $10,000 annual payments he undertook in the original separation agreement to make to his daughters during their minority; this the Commissioner calculated to be $44,695. While not challenging this computation, the taxpayer now contends for the first time that the minor daughter's right to support amounted to $67,6126.25, the stipulated value of all payments due her during minority under the 1946 agreement. Had this contention been presented to the Tax Court, it is of course possible that the taxpayer's method of valuation might have been adopted. That is, the Tax Court might have held that the obligation of support consisted of both the annual payment and the income from the trusts to be set up. But since the taxpayer was content to limit himself to an equally plausible theory — albeit less favorable to his case — we see no justification for requiring relitigation of this issue on remand.

[The court's discussion of two other issues — the computation point mentioned in footnote 2 supra, and the procedural question of whether the government was entitled to assert an additional deficiency for 1944 — is omitted. On the latter question, the court held that the issue was foreclosed by the government's failure to appeal from the Tax Court's decision as to 1944.]

NOTE

1. *Action on remand.* On remand, the Tax Court held that the 1946 agreement was a bona fide arm's-length transaction, there being no evidence that the taxpayer intended in 1946 to make gifts over and above those contemplated by the 1944 agreement. Rosenthal v. Commissioner, ¶54,152 P-H Memo T.C.

2. *Jurisdiction of divorce court.* Does the *Rosenthal* case assume that the divorce court's decree, to the extent it adopted the 1944 agreement, was a nullity that could have been disregarded by the taxpayer with impunity? (Note that the taxpayer took care to provide in the 1946 agreement that it would become effective only when the Nevada court amended its 1944 decree.) Or does the decision rest on the narrower premise that the divorce court could not, on its own motion, have required the taxpayer to support the children after their majority? What if local law authorized the divorce court to require such payments, at least as to children who are mentally or physically incapable of self-support?

If the divorce court has jurisdiction to divide the family property (as in *Harris*) and the husband, to avoid the risks of a court-imposed settlement, agrees to a "package" proposed by the wife (e.g., payments to her, to his mother-in-law, and to his children both during minority and thereafter), does *Rosenthal* require a gift tax to be paid on those elements of the package that could not have been independently imposed by the divorce court? What if the aggregate amount to be paid by the husband is no more than the amount he could have been compelled to pay to the ex-wife alone had the settlement been litigated before the divorce court?

Note that the government conceded in *Rosenthal* that the payments for the support of the children during minority were not taxable gifts — a concession that may have been based on E.T. 19, supra page 1033. If the husband agreed to make payments to the

children during their majority because they agreed to accept less than they were entitled to during their minority, could the husband have relied on §2512(b) (transfer for adequate and full consideration in money or money's worth) to avoid a gift tax?

In *Rosenthal,* the 1946 agreement called for payments to the taxpayer's daughters; their mother had died in 1945. If payments are to be made to an ex-wife "for" or "on behalf of" a child until he reaches the age of 30, would *Rosenthal* require a gift tax to be paid in respect of the payments to be made from age 21 to age 30? Are such payments made to the wife rather than to the child, so as to qualify under the *Harris* principle? What if the taxpayer agrees to pay the wife $25,000 per year, with the amount to be reduced to $20,000 when the child reaches the age of 30 or dies? See Lester v. Commissioner, supra page 184.

3. *Enactment of §2516 (property settlements followed by divorce).* Following the *Harris* and *Rosenthal* cases, Congress enacted §2516 as part of the 1954 Code. The Senate Report, recommending its enactment, states (p. 128): "Under present law property settlements between spouses are not regarded as taxable gifts if the property settlement is incorporated in the decree of divorce. However, the gift-tax status under present law of settlements not incorporated in the decree of divorce is uncertain." Note that §2516 speaks of "transfer . . . in settlement of . . . marital or property rights." If the wife gets more than the value of these rights, is the excess a taxable gift?

When applicable, §2516 permits a transfer to be made free of gift tax even if the agreement is not approved by the divorce court. The importance of the *Harris* case, so far as divorce settlements are concerned, is thus much reduced. But does *Harris* control the status after 1954 of marital settlements that do not meet the requirements of §2516? Consider the following possibilities:

(a) A property settlement under an agreement, with divorce occurring more than two years later. If the divorce court approves the settlement, is the transfer governed by the *Harris* case, or is §2516 now the exclusive route to tax exemption for divorce settlements?

(b) A property settlement under an agreement that is approved by a decree of legal separation, where the parties do not obtain a divorce. Is the *Harris* case applicable?

(c) Transfers to minor children in excess of a "reasonable allowance" for support. Even though such transfers are not sheltered by §2516, do they escape the gift tax if ordered by the divorce court?

(d) Prenuptial agreements. If Mr. Wemyss or Mr. Merrill had failed to perform their agreements until judgments were obtained against them by the ladies, would the satisfaction of the judgments be taxable under the *Harris* case? If a marriage is terminated by divorce within two years after an antenuptial agreement, does §2516 come into play as to the antenuptial transfers?

There is no estate tax provision parallel to §2516. As to the possibility that the divorced husband's estate will be unable to deduct unpaid installments of an obligation that would have been payable free of gift tax during his life under §2516, see page 1278 infra.

On the income tax consequences of a divorce settlement, see United States v. Davis, supra page 432.

4. *Payments to settle family disputes.* The Tax Court has on several occasions held that a payment in settlement of a serious family dispute over property was made for "adequate and full consideration in money or money's worth." Friedman's Estate v. Commissioner, 40 T.C. No. 75 (1963); Beveridge v. Commissioner, 10 T.C. 915 (1948); but see Housman v. Commissioner, 105 F.2d 973 (2d Cir. 1939), cert. denied, 309 U.S. 656. What about a payment to settle a dispute over the custody of a child or a claim for alienation of affections, or to avert a threatened exposure of a family disgrace?

SECTION E. BUSINESS TRANSACTIONS

ESTATE OF ANDERSON v. COMMISSIONER
8 T.C. 706 (1947)

[Gift tax deficiencies of about $870,000 were determined by the Commissioner on transfers, in the circumstances related below, by M. D. Clayton and W. L. Clayton of 18,675 shares of common stock of Anderson-Clayton Securities Corporation to executives of the Corporation. The Corporation was the successor of an unincorporated enterprise, referred to in the opinion as "association."]

ARUNDELL, Judge.

At the threshold we are met with the question of whether the sales of stock by Anderson and Clayton to the six individuals actively engaged in the Anderson-Clayton business enterprise are in any event subject to gift tax. Respondent concedes that these sales were bona fide and at arm's length; but he contends that they were not made in the ordinary course of business, that the value of the stock was greater than the value of the consideration received, and that the excess is therefore taxable as a gift under [§2512(b)]. He relies primarily upon Commissioner v. Wemyss, 324 U.S. 303, for the proposition that the absence of donative intent is immaterial.

It is quite true that in *Wemyss* the Supreme Court held that Congress in [§2512-(b)] had dispensed with the subjective test of donative intent and substituted the more workable external or objective test of whether the consideration for the transfer is full and adequate in money or money's worth. It must not be overlooked, however, that at the same time the Court was careful to point out that genuine business transactions — "business transactions within the meaning of ordinary speech" — are not within the scope of the gift tax. Citing Treasury Regulations [§25.2512-8] it said that:

> . . . the Treasury Regulations make clear that no genuine business transaction comes within the purport of the gift tax by excluding "a sale, exchange, or other transfer of property made in the ordinary course of business (a transaction which is bona fide, at arm's length, and free from any donative intent)." . . . Thus on finding that a transfer in the circumstances of a particular case is not made in the ordinary course of business, the transfer becomes subject to the gift tax to the extent that it is not made "for an adequate and full consideration in money or money's worth."

The first issue therefore reduces itself to the question of whether the sales of common stock of corporation were "made in the ordinary course of business." Petitioners contend that the sales were so made. They argue that, while donative intent may not be material in determining whether a gift has been made, the presence or absence of donative intent is an important circumstance in determining whether a sale or other disposition of property is made in the ordinary course of business. The regulations, they say, define a transfer made in the ordinary course of business as "a transaction which is bona fide, at arm's length, and free from any donative intent."

For the purposes of deciding the first issue thus raised, we shall assume that the stock had a value in excess of the consideration.

All the sales of stock were made pursuant to what was essentially a profit-sharing plan. Profit participation by the active management was a common practice in the cotton merchandising business generally. The evidence makes clear that cotton merchandising is primarily a management business and one of the most

difficult and complex merchandising operations in the world, and that the success of the business is dependent, by and large, upon efficient and well trained management having long experience in all phases of cotton merchandising.

Prior to the organization of corporation, Clayton, Fleming, and Whittington held profit sharing or commission contracts with association which yielded them large annual returns and removed considerable cash from the business. When corporation was organized, its common stock was substituted for the profit sharing contracts; and that had the two-fold effect of keeping cash in the business as invested capital and compelling the executives to acquire a proprietary interest in the business. From the beginning, the common stock of corporation was designed to be held only by persons actively engaged in the Anderson-Clayton business enterprise. Clayton and Anderson were the holders of the largest equities in the business, and the real value of their large investments in preferred stock could be maintained and preserved only by a continued efficient management. In order to build up a responsible management which could continue the business in the event of the retirement or death of Anderson or Clayton, they believed it essential that the junior executives acquire proprietary interests in the business and that such proprietary interests should grow in proportion to the shifting of responsibilities from the seniors to the juniors.

And so the plan was put into operation upon the organization of corporation. All the common stockholders understood that the relative proportions of their holdings would change from time to time as responsibilities were shifted from the older to the younger executives. At the beginning of each cotton season it was customary to reexamine the management situation and the relative contributions to management on the part of the several executives and to determine what readjustments, if any, in the relative ownership of common stock should be made. All the sales of common stock here in issue, as well as other sales not in issue, were made pursuant to the agreement between corporation and all the common stockholders, all of whom were actively engaged in the business. Under that agreement a method was provided for determining annually, in accordance with a consolidated balance sheet adjusted so as to reflect the true net worth of the consolidated business enterprise, a price at which transfers of the common stock should be made. The holders of 75 per cent of the common stock could direct any party to sell all or any part of his stock to corporation or to such person as they might designate. No party could sell or otherwise dispose of his common stock without the written consent of 75 per cent of the holders. If any party should elect to withdraw from the business, he had to sell his stock to corporation. If any party should die, his stock was to be purchased by corporation. No cash dividend could be paid on common stock so long as corporation was indebted in any sum whatever. Other provisions of the agreement are set out in our findings and need not be repeated here. It was contemplated not only that Clayton and Anderson would sell some of their common stock from time to time to their juniors, but also that as the latter should pass the peak of responsibility, they in turn would sell part of their holdings to their juniors who were taking on more responsibility. In other words, the common stock was designed not to be marketable, but to be held in direct proportion to the active participation of each stockholder in the business enterprise.

It is obvious from all these circumstances that the sales of common stock were motivated by the peculiar importance of expert and continuous management to the cotton merchandising business. They were intended to preserve or augment the value of the estates of Clayton and Anderson, as well as to relieve them of obligations to corporation. All the vendees of the stock were either at the time of the sales or shortly thereafter, managing executives in association and held

qualifying shares to make them fully liable for the debts of association. Association being a modified form of partnership, the vendees were partners with Anderson and Clayton in the operating entity of the business enterprise. There was no intent on the part of Anderson and Clayton in selling the stock to confer, nor intent on the part of their vendees to receive, gratuitous benefits. Clearly, then, these transactions were not gifts in any ordinary sense of the word.

In contending that the sales of stock were not "made in the ordinary course of business," respondent's position appears to be that it was neither ordinary for Anderson and Clayton nor ordinary for business men in general to enter into transactions of the type here involved. We do not agree. On the contrary, it is apparent from the numerous occasions on which Clayton and Anderson sold common stock to their junior executives, both those in issue and others not in issue, that it was a quite customary and ordinary thing for them to do. The record also proves that profit sharing or participation among the active management was quite the ordinary and customary practice in the cotton merchandising business generally. Furthermore, from facts within the range of judicial knowledge, we know that nothing is more ordinary, as business is conducted in this country, than profit-sharing arrangements and plans for the acquisition of proprietary interests by junior executives or junior partners, often for inadequate consideration, if consideration is to be measured solely in terms of money or something reducible to a money value.

The cases of Deputy v. DuPont, 308 U.S. 488, and Welch v. Helvering [supra p. 255], relied on by respondent, have little if any bearing on the problem here presented. Both cases deal with expense deductions for income tax purposes under a statute providing for the allowance of "ordinary and necessary expenses paid or incurred . . . *in carrying on any trade or business.*" (Italics supplied.) It does not follow that considerations which are relevant in determining whether an item of expense is an "ordinary and necessary" business expense for purposes of income tax deduction are relevant in determining whether a transfer of property is made "in the ordinary course of business" for purposes of the gift tax.

The pertinent inquiry for gift tax purposes is whether the transaction is a *genuine business* transaction, as distinguished, for example, from the marital or family type of transaction involved in *Wemyss* and its companion case, Merrill v. Fahs, 324 U.S. 308. Surely it will not be said that there may not be a genuine business transaction not directly connected with the taxpayer's trade or business or even though the taxpayer be not engaged in "carrying on any trade or business," within the scope of that term as limited by Higgins v. Commissioner, 312 U.S. 212. Bad bargains, sales for less than market, sales for less than adequate consideration in money or money's worth are made every day in the business world, for one reason or another; but no one would think for a moment that any gift is involved, even in the broadest possible sense of the term "gift."

It appears that this is the first attempt on the part of the respondent to apply the gift tax to transactions such as those presented here. To sustain the attempt, in our judgment, would be to work a perversion of the whole purpose and spirit of the gift tax law. However broadly Congress may have used the term "gifts" in the gift tax law, and however much it may have dispensed with common law concepts of gifts, we are certain that the law was neither designed nor intended in its operation to hamper or straight-jacket the ordinary conduct of business.

We have found that the sales of stock in issue were bona fide and made at arm's length, in the ordinary course of business. Therefore, assuming, without deciding, that the value of the stock was greater than the value of the consideration, we hold that the transfers are not subject to gift tax. This makes it unnecessary to decide the question of value or to determine in which calendar years

certain of the transfers were effected, and we have accordingly made no findings of fact with respect to these questions.

Reviewed by the Court.

Decisions will be entered for the petitioners.

NOTE

1. *Shareholders' agreements.* The shareholders of closely held corporations often agree that the shares of a deceased shareholder must be offered to the other shareholders at book value (i.e., without taking goodwill or appreciation in the value of real estate or other assets into account). If such an agreement imposes a similar requirement on retired shareholders, does *Anderson's Estate* insure that no gift tax liability is incurred, either when the agreement is executed or when the shares are sold for less than their unrestricted value? What if the shareholders are members of the same family? See page 1349 infra.

2. *Transactions with family businesses.* In Rothrock v. Commissioner, 7 T.C. 848 (1946), the court held that the taxpayer and his business partner did not make taxable gifts to their sons when they took them into the business as partners:

> The issue, as we see it, narrows to whether the prospective earnings of the sons were attributable purely to personal services, or partly to the contribution made by the existence and continuation of a going concern — in other words to a share in presently valuable business prospects, comparable to good will, which being the property of the old partnership was in some measure transferred to them as members of the new firm.
>
> It is not requisite to put too fine a point upon the principle involved in that distinction. If in fact there were no future earnings inherent in the business itself, it matters little whether we say, as a matter of law, there was a gift, see William H. Gross, 7 T.C. 837, but its value was so negligible as to eliminate it from practical consideration; or the value being absent, the consideration passing could not fail to be full and adequate; or, there being no existing vehicle for the transmission of future earnings in such a purely personal service business, cf. Tinkoff v. Commissioner (C.C.A., 7th Cir.), 120 Fed. (2d) 564; Thomas M. McIntyre, 37 B.T.A. 812, there was nothing which could be the subject of a gift. On any approach the result is identical.
>
> Our interpretation of the evidentiary facts leads us to the ultimate finding that petitioners have borne their burden of showing that the business by itself possessed no substantial element of future earning power or good will, but that, on the contrary, its income was derived primarily from personal services, so that different participants with similar abilities, experience, and contacts could have organized a comparable venture and enjoyed a parallel success from their contribution of time, skills, and services. See, e.g., Amalgamated Products Co., 12 B.T.A. 659. This factor, coupled with the proven capacity of the respective sons and the value to the business of their contributions, results in our inability to discover any gift of interests, tangible or intangible, direct or indirect, to which the tax could attach.

Is there any relationship between this finding and the reference in §704(e)(1) to a "capital interest in a partnership in which capital is a material income-producing factor"? In the *Gross* case, distinguished by the court, a gift was found because the partnership's trade name, goodwill, and secret formulas were valuable. Under *Rothrock,* however, could these values be disregarded if the son's services were reasonably thought to be essential to the future conduct of the business? See Heringer v. Commissioner, 235 F.2d 149 (9th Cir. 1956), cert. denied, 352 U.S. 927 (1956), in which the taxpayers transferred a valuable farm to a family corporation, in which they and their children were shareholders; their argument that the transfer was not a gift because intended "to provide for said children an incentive to work the farm more productively, thus placing the transactions in the category of transactions in the ordinary course of business and without donative intent" was rejected as not in accord with the facts.

See also Hull v. Commissioner, ¶62,199 P-H Memo T.C. (property worth $471,000 transferred to family corporation for annuity worth $214,000; held, not a gift even though

49 per cent of stock was owned by or for members of transferor's family, because she was relieved of management responsibility and believed that she received full value); Weller v. Commissioner, 38 T.C. 790, 805-807 (1962).

3. *Business "gifts."* If a businessman gives a friend a Cadillac for some business advice (Commissioner v. Duberstein, supra p. 119), is the transfer subject to gift tax? What if an employer makes a payment, or a series of payments, to the widow of a deceased employee, motivated by affection or a charitable concern for her welfare? If a businessman pays $25,000 to a member of the public because he is at home when the phone rings, knows that George Washington was the first President of the United States, or catches a marked fish in a contest (Simmons v. United States, supra p. 137), has he made a taxable gift?

Is a bribe a taxable gift if the "consideration" is valuable but unlawful? Should Reinfeld have paid a gift tax when he paid off Rutkin (see United States v. Rutkin, supra p. 105)? What about a gift to a young lady for granting the donor the exclusive right to her "companionship" (See Brizendine v. Commissioner, supra p. 127)?

The cancellation of indebtedness by the creditor of a business corporation was held to be a "gift" (and hence excluded from the debtor corporation's gross income by what is now §102(a) of the Internal Revenue Code) in Helvering v. American Dental Co., 318 U.S. 322, 331 (1943): "The fact that the motives leading to the cancellation were those of business or even selfish, if it be true, is not significant. The forgiveness was gratuitous, a release of something to the debtor for nothing, and sufficient to make the cancellation here gifts within the [income tax] statute." Is a gift tax due? (The *American Dental Co.* case was severely limited by Commissioner v. Jacobson, supra page 91.)

4. *Prizes and awards.* If the taxpayer offers a prize for the best essay on a subject of public interest or a reward for information leading to the capture of a public enemy, does the payment escape gift tax as a business transaction, or because he has received adequate consideration? See Du Pont v. United States, 97 F. Supp. 944 (D. Del. 1951) (contribution to National Economic Council, to encourage private enterprise and further general welfare; held, taxable gift). What of a reward for the return of lost property? A payment to a grandchild for avoiding tobacco, liquor, and loose women until reaching the age of 21?

SECTION F. THE ANNUAL EXCLUSION

UNITED STATES v. PELZER
312 U.S. 399 (1941)

MR. JUSTICE STONE delivered the opinion of the Court.

Decision in this case turns on the question whether certain gifts of property in trust for the benefit of several beneficiaries are gifts of "future interests" which, in the computation of the gift tax, are, by §504(b) of the 1932 Revenue Act denied the benefit, otherwise allowed, of exclusion from the computation to the extent of the first $5,000 of each gift "made to any person by the donor" during the calendar year.* . . .

In 1932 the taxpayer, respondent here, created a trust for the benefit of his eight grandchildren and any other grandchildren who might afterward be born during the term of the trust. The trustee was directed to accumulate the income for a period of ten years and thereafter to pay an "equal grandchild's distributive share" of the income to each of the named grandchildren who were then living

* The exclusion was reduced to $4000 by the Revenue Act of 1938 and to $3000 by the Revenue Act of 1942. The applicable provision of current law is §2503(b). — ED.

and twenty-one years of age and to pay a like share of income to each other named grandchild for life after that child should reach the age of twenty-one years. Provision was made whereby grandchildren born after the creation of the trust and during its life were to receive like participation in the income of the trust except as to distributions of income made prior to the birth of such after-born grandchildren, and except that the after-born grandchildren should be paid their shares of the income during their respective minorities after the termination of the ten-year accumulation period. The trust instrument also made gifts over of the share of the income of each grandchild at death, the details of which are not now material. It was further provided that the trust should terminate twenty-one years after death of the last survivor of the named grandchildren, when the corpus of the trust, with accumulated income, was to be distributed in equal shares among the surviving grandchildren and the issue per stirpes of all deceased grandchildren.

During the years 1933, 1934, and 1935, the taxpayer added further amounts of property to the 1932 trust. . . .

Upon claims for refunds of overpaid taxes upon the transfers made in the years 1933, 1934, and 1935, the commissioner recomputed the tax and allowed one $5,000 exclusion only from the net amounts subject to gift tax given or added in each year to each trust. In the present suit, brought in the Court of Claims, respondent sought to recover overpaid taxes for the years in question on the grounds that the gifts to the beneficiaries were gifts of present, not future, interests and that the taxpayer in the computation of the tax for each year was entitled to one exclusion of $5,000 for each beneficiary. The court sustained both contentions and gave judgment for respondent accordingly. 31 F. Supp. 770. We granted certiorari, 311 U.S. 634, to resolve the conflict of the decision below with that of the Seventh Circuit in United States v. Ryerson, 114 F.2d 150.

The Government challenges both grounds of decision below. It argues that only a single $5,000 exclusion is allowable . . . from the total gifts made to the trust in each calendar year and that if the gifts are deemed to be made to the named beneficiaries of the trust no deduction can be allowed in the case of gifts to the 1932 trust because they were of future interests for which no exclusion is allowed. . . .

We have this day decided the first question, in Helvering v. Hutchings, 312 U.S. 393, in which we held that in the case of gifts in trust the beneficiaries are the persons to whom the gifts are made and that for purposes of computation of the tax [§2503(b)] excludes the first $5,000 in value of the gift to each beneficiary from the taxable amount of the gifts made in the calendar year. For the reasons stated in our opinion in that case we hold that the first beneficiaries of the trusts in this case are the persons to whom the gifts were made and that the taxpayer is entitled to the benefit of the $5,000 exclusion for each gift to such beneficiary if it is not of a future interest.*

---

* Helvering v. Hutchings, 312 U.S. 393:

"The gift tax provisions are not concerned with mere transfers of legal title to the trustee without surrender by the donor of the economic benefits of ownership and his control over them. A gift to a trustee reserving to the donor the economic benefit of the trust or the power of its disposition, involves no taxable gift. It is only upon the surrender by the donor of the benefit or power reserved to himself that a taxable gift occurs . . . and it would seem to follow that the beneficiary of the trust to whose benefit the surrender inures, whether made at the time the trust is created or later, is the 'person' or 'individual' to whom the gift is made.

"But for present purposes it is of more importance that in common understanding and in the common use of language a gift is made to him upon whom the donor bestows the benefit of his donation. One does not speak of making a gift to a trust rather than to his children who are its beneficiaries. The reports of the committees of Congress used words in their natural sense and

But the Government argues here, as it did below, that the gifts to the beneficiaries of the 1932 trust are of future interests within the meaning of the statute and treasury regulations. While the eight named grandchildren are the first beneficiaries of the trust, and the persons to whom the gifts were made, none of them takes any benefit from the trust before the end of the ten-year accumulation period or until he is twenty-one, whichever last occurs, and then only if he survives that event. And the question is whether such a gift is a gift of a "future interest" within the meaning of [§2503(b)]. Respondent, relying on statutes and judicial decisions of Alabama, where the trust was created and is being administered, insists that the gifts to the named grandchildren are present, not future, interests as defined by Alabama law. He argues that as [§2503(b)] does not define the "future interests" gifts of which are excluded from its benefits, they must be taken to be future interests as defined by the local law, and it is the local law definition of future interests which must be adopted in applying the section. But as we have often had occasion to point out, the revenue laws are to be construed in the light of their general purpose to establish a nationwide scheme of taxation uniform in its application. Hence their provisions are not to be taken as subject to state control or limitation unless the language or necessary implication of the section involved makes its application dependent on state law. Burnet v. Harmel, 287 U.S. 103, 110; Morgan v. Commissioner, 309 U.S. 78, 81.

We find no such implication in the exclusion of gifts of "future interests" from the benefits given by [§2503(b)]. In the absence of any statutory definition of the phrase we look to the purpose of the statute to ascertain what is intended. It plainly is not concerned with the varying local definitions of property interests or with the local refinements of coveyancing, and there is no reason for supposing that the extent of the granted tax exemption was intended to be given a corresponding variation. Its purpose was rather the protection of the revenue and the appropriate administration of the tax immunity provided by the statute. It is this purpose which marks the boundaries of the statutory command. The committee reports recommending the legislation declared (H. Rept. No. 708, 72d Cong., 1st Sess., p. 29; S. Rept. No. 665, 72d Cong., 1st Sess., p. 41):

---

in the sense in which we must take it they were intended to be used in [§2503(b)] when, in discussing [§2501(a)], they spoke of the beneficiary of a gift upon trust as the person to whom the gift is made. Similarly they spoke of gifts effected by transfer of money or property to another as consideration for the payment of money or other property to a third person as a gift to the third person. . . . It is of some significance also that the denial . . . of the exemption in the case of gifts of 'future interests' has little scope for practical operation unless the gifts to which the exemption applies include those gifts made to beneficiaries of a trust, since it is by resort to the conveyance in trust that most future interests are created.

"Moreover, the very purpose of allowing a gift tax exemption measured by the number of donees would be defeated if a distinction were to be taken between gifts made directly to numerous donees and a gift made for their benefit by way of a single trust, and we are unable to discern in the statute or its legislative history any purpose to make such a distinction. While one object of the exemption was to permit small tax free gifts, and at the same time 'to fix the amount sufficiently large to cover in most cases wedding and Christmas gifts' without the necessity of keeping accounts and reporting the gifts, nevertheless the statute extended the exemption in the specified amount to all gifts, whether large or small, 'made to any person.'

"In the face of an exemption thus made broadly applicable to all gifts to all donees and in the absence of some indication of an intention to discriminate between gifts made directly to the donees and those made indirectly to the beneficiaries of a trust, we can hardly assume a purpose to favor one class of donees over the other or find such a purpose in the words of the statutory definition of 'person' which may indicate either the trust or each individual beneficiary of the trust as the person to whom the gift is made. Further, such an assumption would open the way to avoid the $5,000 limitation upon the allowed exemption, by resort to the simple expedient of the creation by a single donor of any number of trusts of $5,000 each for the benefit of a single beneficiary. A construction so dependent upon an artificial meaning of the words of the statute and so out of harmony with the statutory scheme and purpose is not to be favored." — Ed.

The term "future interests in property" refers to any interest or estate, whether vested or contingent, limited to commence in possession or enjoyment at a future date. The exemption being available only in so far as the donees are ascertainable, the denial of the exemption in the case of gifts of future interests is dictated by the apprehended difficulty, in many instances, of determining the number of eventual donees and the values of their respective gifts.

Article XI of Treasury Regulations 79, 1933 and 1926 editions [now Regs. §25.2503-3] declared that "future interests" include any interest or estate "whether vested or contingent, limited to commence in use, possession, or enjoyment at some future date or time." . . .

We think that the regulations, so far as they are applicable to the present gifts, are within the competence of the Treasury in interpreting [§2503(b)] and effect its purpose as declared by the reports of the Congressional committees, and that the gifts to the eight beneficiaries of the 1932 trust were gifts of future interests which are excluded from the benefits of that section. Here the beneficiaries had no right to the present enjoyment of the corpus or of the income and unless they survive the ten-year period they will never receive any part of either. The "use, possession, or enjoyment" of each donee is thus postponed to the happening of a future uncertain event. The gift thus involved the difficulties of determining the "number of eventual donees and the value of their respective gifts" which it was the purpose of the statute to avoid.

We have no occasion to consider the definition of future interests in other aspects than those presented by the present case. The judgment of the Court of Claims will be reversed so far only as it excluded the gifts to the 1932 trust from the computation of the tax for each of the years in question.

Reversed.

NOTE

1. *The function of the annual exclusion.* In recommending an exclusion of $5000 in 1932, the Senate Finance Committee described its purpose as follows:

> Such exemption, on the one hand, is to obviate the necessity of keeping an account of and reporting numerous small gifts, and, on the other, to fix the amount sufficiently large to cover in most cases wedding and Christmas gifts and occasional gifts of relatively small amounts. [S. Rept. No. 665, 72d Cong., 1st Sess., reprinted in 1939-1 C.B. (Part 2) 496, 525-526.]

Even though the amount excluded has been reduced to $3000, the parents of 3 children, by pooling their exclusions and exemptions as permitted by the "split gift" provision (infra p. 1112), can transfer $18,000 ($6000 per child) per year free of gift tax; in 10 years, this amount plus their $60,000 lifetime exemption will amount to almost a quarter of a million dollars.

Note the reason given in the extract from the Congressional reports in *Pelzer* for denying the exclusion to gifts of future interests. Is there any difficulty in determining that there will be at least *one* "eventual donee" of the 1932 trust in the *Pelzer* case? In Rev. Rul. 55-679, 1955-2 C.B. 390, the Internal Revenue Service addressed itself to the proper number of exclusions for a trust under which the income was to be paid quarterly for a 10-year period to such of the grantor's grandchildren as might be living at the time of each payment, after-born grandchildren being entitled to share along with these living at the time the trust was created. The Service held that if a minimum value could be assigned to the interests of the grandchildren living when the trust was created — e.g., on the assumption that the maximum number of additional grandchildren who could share in the income during the 10-year life of the trust was 50 — exclusions were allowable for the 10 living grandchildren even though the number of eventual donees was not ascertainable. See also Rev. Rul. 55-678, 1955-2 C.B. 389, to the same effect.

In Faulkner v. Commissioner, 41 B.T.A. 875 (1940), the taxpayer was allowed an exclusion for a gift in trust for her first child to be born after the date of the gift. Would the exclusion be permitted under the rationale of the subsequently decided *Pelzer* case? The taxpayer made a contribution in the same year to the Birth Control League of Massachusetts: should that have weakened her claim for an exclusion? What effect should be given to the fact that she was pregnant when she made the gift?

2. *Support trusts.* In Commissioner v. Disston, 325 U.S. 442 (1945), the trustees were to accumulate trust income for future distribution to the beneficiaries, subject to a power to distribute currently such income "as may be necessary for the education, comfort and support" of minor beneficiaries. The Court denied an exclusion on the ground that the trustees had discretion to distribute or withhold income, but went on to say:

> But, even though the trustees were under a duty to apply the income for support, irrespective of outside sources of revenue, there is always the question how much, if any, of the income can actually be applied for the permitted purposes. The existence of a duty so to apply the income gives no clue to the amount that will be needed for that purpose, or the requirements for maintenance, education and support that were foreseeable at the time the gifts were made. In the absence of some indication from the face of the trust or surrounding circumstances that a steady flow of some ascertainable portion of income to the minor would be required, there is no basis for a conclusion that there is a gift of anything other than for the future. The taxpayer claiming the exclusion must assume the burden of showing that the value of what he claims is other than a future interest. [325 U.S. at 448-449.]

See also Commissioner v. Sharp, 153 F.2d 163 (9th Cir. 1946) (trustee required to use income for minor's benefit, but could do so by spending funds itself or paying them to minor's mother or guardian; held, exclusion allowable).

3. *Gift of income for life or a term.* At one time, the Treasury took the position that a life estate is a future interest, except for the income to be paid to the donee in the year of the gift, because the annual installments are to be paid at future times. Several cases holding to the contrary were apparently approved by the Supreme Court in Fondren v. Commissioner, 324 U.S. 18, 21 (1945): ". . . it has been held that if the income of a trust is required to be distributed periodically, as annually, but distribution of the corpus is deferred, the gift of the income is one of a present interest, that of the corpus one in futuro." In Charles v. Hassett, 43 F. Supp. 432, 434-435 (D. Mass. 1942), the court pointed out some of the implications of holding that a life estate is a present interest but a remainder a future interest:

> If a gift of $5,000 to trustees to pay the income to *A* for life is a present interest, what is to be said of these gifts: (1) $200 to *A* each year so long as he lives; (2) $200 to *A* the first year, if he lives, $300 to *A* the second year, if he lives, $400 to *A* the third year, if he lives, etc.; (3) $200 to *A* the first year, if he lives, $200 to *A* the second year, if he lives, etc. and $5,000 to *A* the fifteenth year, if he lives; and finally, (4) the income on $5,000 to *A* each year he lives for the next fifteen years, and then $5,000 to *A* in the fifteenth year?
>
> To the argument implied in that progression, the answer is that historically lawyers have treated gifts of income beginning at once and lasting for life, or for a period of years, as a "present interest" and gifts of principal at a future date as a "future interest"; that Congressional committees and the Treasury appear to have had some such distinction in mind; and that this and other circuits in construing the gift tax statute have used that line of distinction in cases where the gifts of income and of principal were to different persons. . . . No historical reason justifies abandoning the distinction in cases where the gifts of income and of principal are to the same person and are therefore regarded by donor and donee as one gift.

The court then pointed out the "anomalous" result that the donor may pay a heavier gift tax if he gives his donee the income of a short-term trust than if the trust is of longer duration, even though the remainder is to go to the same donee on the termination of the trust. To illustrate:

> Suppose $5000 is transferred in trust to pay the income to A (who is now 15 years old)

for 10 years or life, whichever is shorter, the remainder to be paid to him or his estate on the termination of the trust. Assuming an annual return of $175 (3½ per cent), A's income interest is worth $1445 and the remainder interest is worth $3555. (Table X, Actuarial Values for Estate and Gift Tax, Treasury Publ. No. 11.) If the trust is for 20 years or A's life (whichever is shorter), however, with remainder to A or his estate, the income interest is worth $2450, and the remainder is worth $2550. (Id., Example 11.) Since only the income interests qualify for the exclusion, the taxable gift is $3555 in the first case and $2550 in the second, although in the first case the donee will obtain outright ownership earlier than in the second case. Note, however, that this odd result is produced only because the shorter trust "wastes" more of the $3000 exclusion than the larger one. The trusts would be taxed identically if both life interests exceeded $3000 in value. Thus if the amount involved were $15,000, there would be a taxable gift of $12,000 whether the term of the trust was 10 years or 20.

A similar paradox is exemplified by Evans v. Commissioner, 198 F.2d 435 (3d Cir. 1952), involving a trust under which the income was payable to a named beneficiary for life, with a power in the trustee in its "uncontrolled discretion" to advance principal for his "education, comfort and support." Although the Treasury conceded that to the extent of the life interest the gift was not a gift of a future interest, it contended that the value of this part of the gift could not be determined because of the trustee's power to invade principal. The court agreed, and denied the exclusion. The decision was overruled by the second sentence of §2503(b), added in 1954.

4. *Effect of spendthrift clause.* Revenue Rul. 54-344, 1954-2 C.B. 319, adopts the position that a gift of the present right to enjoy the income of a trust for a period of years or for life "will not be held to be one of a future interest in property solely because of the inclusion of a provision or clause which prohibits the income beneficiary from alienating, assigning or otherwise anticipating such income."

5. *Gifts of contractual rights to future payments.* The Regulations provide that a gift of a bond qualifies for the exclusion even though it bears no interest until maturity, and that a policy of life insurance also qualifies even though it calls for payments in the future. Regs. §25.2503-3(a); see also Rev. Rul. 55-408, 1955-1 C.B. 113 (exclusion allowed for gift of insurance policy despite lack of cash surrender value). Why this distinction between future payments under a contract, the value of which is a present interest qualifying for the exclusion, and a remainder or similar interest in a trust, which does not qualify? How is a gift of an annuity contract to be treated, if payments are to commence at a future date? Roberts v. Commissioner, 143 F.2d 657 (5th Cir. 1944), cert. denied, 324 U.S. 841 (1945). If the donor does not create a future interest, but transfers one that is already in existence (e.g., his remainder interest under a trust created by his father), does the exclusion apply?

6. *Gifts of unproductive property.* In Gilmore v. Commissioner, infra page 1059, the court held that a trustee's power to invest in non-productive property did not deprive the income beneficiary of a present interest:

> . . . the trust gives the donee the absolute right to all income. The fact that there may not be income during a year is not a contingency imposed by the donor. It is the right of a donee to the income, rather than the accident of whether there is income at any given time, that is the criterion of present interest. That the corpus of a trust may consist of non-interest bearing notes, payable at a future date, does not prevent a gift from being one of present interest. Commissioner of Internal Revenue v. Kempner, 5 Cir., 126 F.2d 853. [213 F.2d at 522.]

If the trustee not only has the power to invest in non-productive property, but is likely to exercise it, how can the beneficiary's income interest be valued? See Geller v. Commissioner, 9 T.C. 484 (1947) (gift of income interest under trust could not be valued where corpus consisted of stock of closely held corporation that was not paying dividends).

7. *Gifts to corporations.* In Scanlon v. Commissioner, 42 B.T.A. 997 (1940), the court held that a transfer of property to a corporation wholly owned by the transferor was not a taxable gift; and in Heringer v. Commissioner, 235 F.2d 149 (9th Cir. 1956), cert. denied, 352 U.S. 927 (1957), where property was transferred by four persons to a corporation of which they owned 40 per cent of the stock, the court cited Helvering v. Hutchings (supra

p. 1054) in holding that the amount of the gift was 60 per cent of the value of the property, that being the amount that inured to the benefit of the non-donor shareholders (11 children of the transferors). As to the proper number of exclusions, however, the opinion is indecisive. Each donor had claimed 11 exclusions, on the ground that the donees were the 11 children; but the Tax Court allowed only one exclusion to each donor, on the theory that the donee was the corporation. On appeal, the court held that if the 11 children were the donees (a question it found unnecessary to answer), the gifts were of future interests because:

> Shareholders of the corporation could possess or enjoy the land or income derived therefrom only upon declaration of dividends, an act which required the joint action of members of the competent corporate body and which no single shareholder could perform. [235 F.2d at 152.]

(Since the government had not appealed, the Tax Court's action in allowing one exclusion to each donor was not disturbed.) Does this ground for denying the exclusions claimed by the taxpayer imply that a gift of stock of a closely held corporation does not qualify for an exclusion if it constitutes a minority interest?

Gifts to charitable and certain other organizations are deductible by virtue of §2522. In Du Pont v. United States, 97 F. Supp. 944 (D. Del. 1951), in which the court held that a contribution to the National Economic Council was not deductible because the organization did not meet the requirements of §2522, the government allowed one exclusion and the court implied that this allowance was proper. Rev. Rul. 59-57, 1959-1 C.B. 626, states that contributions to political parties are not deductible, but that the $3000 exclusion is applicable. If a contribution to the political party is to finance an electoral campaign, should one exclusion be allowed for each candidate? If the taxpayer contributes to several committees or other groups who are supporting a single candidate, is he entitled to a separate exclusion for each contribution, or must the gifts be amalgamated on the theory that they benefit but a single donee?

GILMORE v. COMMISSIONER

213 F.2d 520 (6th Cir. 1954)

Before ALLEN and MCALLISTER, Circuit Judges, and GOURLEY, District Judge.

MCALLISTER, Circuit Judge.

The issue in this case is whether a gift of property in trust for the benefit of minors, providing that the trustees pay the principal and income to the beneficiaries upon their demand, with a further provision permitting the trustees to invest the trust funds in income or non-income producing investments, is a gift of a present interest. . . .

Petitioner made the gifts, of corporate stock, by the creation of trusts for her seven minor grandchildren. The trusts provided that the trustees "*shall pay the principal and all income from the trust estate to* (*the named beneficiary*) *upon demand by the said* (*beneficiary*), and in case of his death this trust will terminate and all of the remaining principal and accumulated income therefrom shall be paid to the estate of the said (beneficiary)." (Emphasis supplied.)

The trust further provided that "All payments of income or distribution of principal to the beneficiary . . . shall be made to such beneficiary in person or upon his personal receipts"; that they should not be grantable, transferable, or otherwise assignable in anticipation of payment thereof, in whole or in part, by the voluntary or involuntary acts of any such beneficiary, or by operation of law, and should not be liable or taken for any obligation of such beneficiary. It was further provided that payments or distributions to an incompetent beneficiary might be made by the trustees for the benefit of such beneficiary in certain desig-

nated ways as in the opinion of the trustees would be most desirable, as noted in the margin.[1]

The Commissioner, in his determination of deficiency, denied the claimed exclusion and determined that the gifts were of future interests on the ground that "Since the beneficiaries at the time of the transfers ranged in ages from one to seven years it is considered that each of the transfers of the trust income and corpus were 'future interests' as defined by the Commissioner." The Tax Court's decision was, however, not based on the minority of the beneficiaries but upon the terms of the trust which the court construed so to limit the beneficiaries' rights, as to compel the conclusion that the gifts involved were of future interests, whether or not the benficiaries were minors.

[Discussion of trustees' power to invest in non-income-producing property omitted; see page 1058 supra.]

The Tax Court appears to have considered that the provision in the trust instrument for using payments of principal or income "directly for the benefit of such beneficiary" gave unqualified power in the discretion of the trustees, to hold the corpus and income in disregard of a direct demand for the payment thereof by a donee. Where a trust authorizes the payment by the trustees, upon demand by the beneficiary, either direct to the beneficiary, to his parent, or other person with whom he resides, or by direct application by the trustee for the benefit of the beneficiary, there is no discretion on the part of the trustee to withhold payment. And again, we come back to the unqualified direction to the trustees to pay the principal or income of the trusts *on demand of the beneficiary*. Kieckhefer v. Commissioner, 7 Cir., 189 F.2d 118, 121, is an authority in point on the issue here presented. There, the donor created a trust for the benefit of his grandson, at that time less than one month of age. The instrument provided for payment to, or application for, the benefit of the beneficiary of so much of the trust income or principal as might be necessary for the education, comfort, and support of the beneficiary, with instructions to accumulate the balance of income for future distribution. It was further provided that the beneficiary was to be entitled to all or any part of the trust estate, free of trust, whenever he, or his legally appointed guardian, made due demand therefor by an instrument in writing. The Tax Court had held that the gift of both income and principal was clearly one of a future interest, and that the right of the beneficiary to demand payment was nugatory since a minor was incapable of making an effective demand. The Court of Appeals reversed, and held the gift to be one of present interest because the beneficiary's right to demand gave him an unconditional right to the present use, possession, or enjoyment of the property. In its decision, the court held that "It is not . . . the use, possession or enjoyment by the beneficiary which marks the dividing line between a present and future interest, but

1 "Payments or distributions to an incompetent beneficiary may be made by the Trustees for the benefit of such beneficiary in such of the following ways as in their opinion shall be most desirable: (a) directly to such beneficiary; (b) to the duly qualified legal representative or representatives of such beneficiary; (c) to some near relative or friend of such beneficiary; or (d) by the Trustees using payment directly for the benefit of such beneficiary. Distributions of the Trust Estate, or any share thereof, may be made in investments at the fair market value thereof and cash, or either, and in such proportions thereof as the Trustees shall deem to be most equitable.

"*Incompetent Persons.* A person shall be deemed 'incompetent' for the purposes of this agreement if he or she shall be under legal disability declared or adjudicated by a court of competent jurisdiction, or if he or she shall be incapacitated to such extent as, in the Trustees' opinion, shall make it impossible or impracticable for such person to give prompt and intelligent consideration to business matters. The Trustees may require, accept and act upon such evidence of the competence or incompetence of any person as the Trustees shall deem appropriate and reliable without liability by reason thereof."

it is the right conferred upon the beneficiary to such use, possession or enjoyment." It is the right given to the donee, in the trust instrument, to use, possess, or enjoy, and not the capacity of the donee, which determines whether the gift is one of present or future interest. Fondren v. Commissioner, 324 U.S. 18; United States v. Pelzer, 312 U.S. 399.

The government, however, submits that even though the beneficiaries were adults, the gifts in this case would be contingent to them for the same reason they would be contingent to the infant beneficiaries, and that no beneficiary, adult or infant, could make an effective demand that the trustees pay him the entire estate at any time — in spite of the fact that the trust instrument expressly provides for such payment on demand. We are unable to concur in such a view, so obviously contrary to the donor's intention and so clearly contrary to the language of the trust instrument.

The Tax Court further decided that the gifts were not of present interest because the trust instrument provides that the trustees may determine, in their own discretion, whether a beneficiary is incapacitated to such an extent as to make it impossible for him to give prompt and intelligent consideration to business matters, and in such case, they were empowered to make payments at their sole discretion, among other ways, by using such payments for the benefit of the beneficiary. The Tax Court, therefore, held that the beneficiary's right to present enjoyment of income or principal was contingent on the mere whim of the trustees.

With regard to incompetence, the provision in the trust instrument is that a person shall be deemed "incompetent," for the purposes of the trust, if he shall be under legal disability, declared or adjudicated by a court of competent jurisdiction, *or if he shall be incapacitated* to such extent as, in the trustees' opinion, shall make it impossible or impracticable for him to give prompt and intelligent consideration to business matters, and that the trustees may require, accept, and act upon such evidence of the competence or incompetence of any person that the trustees shall deem appropriate and reliable. This certainly does not mean that the trustees may determine, by their mere whim, that a donee is incompetent, because incapacitated. "Incapacitated" is a strong word, and, according to the purport of the trust instrument, a conclusion by the trustees that a beneficiary is incompetent and incapacitated envisages reliance on trustworthy evidence. The discretion of the trustees in this regard is the discretion of reasonable men acting as trustees. They must act in good faith. They cannot act on arbitrary whim; and any such action could be remedied by a court of equity on grounds of betrayal of trust and abuse of discretion.

In accordance with the foregoing, the decision of the Tax Court is reversed and the deficiency expunged.

BRIGGS v. COMMISSIONER

34 T.C. 1132 (1960)

TIETJENS, Judge: The petitioner contests a deficiency of $5,255.81 in gift tax for 1954, based on a determination by the Commissioner that gifts of stock made by petitioner to nine minor donees under guardianship were gifts of future interests in property rather than present interests. . . .

The gifts in question consisted of shares of corporate stock of the Outboard Marine & Manufacturing Company and were made by the petitioner and her husband by deed of gift to already-appointed guardians of the minor donees. During 1954 the minor donees resided in California and Illinois with their respective parents.

Each gift made to the children in California was made "subject to terms and conditions of the order of the Superior Court of Los Angeles County in the matter of your guardianship" made by the court authorizing the donee's guardian to accept the gifts. The gift made to the minor donee residing in Illinois was made subject to the same conditions, specified in the deed of gift itself. The conditions attached to each gift were stated as follows:

1. That each gift is made subject to all gift taxes thereon. The Donee shall pay all such taxes imposed upon the Donor (Stephen F. Briggs or Beatrice B. Briggs, as the case may be) by reason of such gift, or shall reimburse the Donor therefor, without interest. Such payment or reimbursement shall be made only out of the corpus of the donated property, or out of other property of the Donee, and in no case out of income from the donated property.

2. That your Guardian shall be authorized but not required to use or expend any part of the donated property or of the income therefrom, or both, for your support, maintenance and education; any income not used for the purposes mentioned to be invested for your benefit.

3. That your Guardian shall in no case be required to convert the donated shares of stock into any other form of holding, but is authorized to retain such shares as long as in your Guardian's judgment retention is in the best interest of yourself, as Donee.

The parents of each beneficiary were at the time of the gift and thereafter fully willing and able to provide adequately for the maintenance, education, and support of each of the beneficiaries. Petitioner was aware of this fact and expected that state of affairs to continue, but she recognized the possibility that future needs or misfortunes might arise which could alter that state of affairs.

At the time of the gifts in question and thereafter during the minority of the minor donees, the respective fathers of each of the donees served as their respective guardians, duly appointed by an appropriate court, and accounts and reports of each of the guardianship estates have been filed and approved by these courts without any appeal from any of these accounts.

These accounts and reports indicate that dividends from the donated stock were received by the guardians and that disbursements were made from each of the guardianship estates, including cash distributions to the minors themselves (sometimes referred to as "allowances"), payments of the minors' income and gift taxes, and various types of insurance premiums, and in some cases, payments of private school tuition and expenses, dental expenses, airplane fare and bus fare, clothing and other wearing apparel, summer camp, court costs, automobiles, purchase of investments, bank charges, and miscellaneous expenses not otherwise identified in the accounts.

When any of the minors reached age 21, his or her guardianship was terminated and the estate was delivered to him or her, including the gift property here involved. . . .

The Commissioner's argument is summarized as follows: The California law, as well as that of Illinois, prevents parents of minors (who in this case are also legal guardians) from using the estates of their minor children or the income therefrom for the support, maintenance, and education of their children, unless the estates of the parents are insufficient to support the children in accordance with their station in life. In other words, the Commissioner argues, the minor donees did not at the time of the gifts "receive the unqualified and immediate right *then* to the use and enjoyment . . . of the donated property and the income therefrom."

We think the Commissioner's argument cuts too deep. The so-called condition, set forth as paragraph 2 above, to which our attention is directed, is not, in our opinion, a restriction on the use of the gifts themselves or their income

which transforms what otherwise would be a gift of a present interest in the property into a future interest. The purpose of the condition was just what the petitioner contends it was; i.e., to remove the restriction imposed by State law, which permits the use of a minor's estate for the minor's support, maintenance, and education only if the parents are unable themselves to provide for such needs from their own estates. See Cal. Prob. Code secs. 1502, 1503, 1504, and Ill. Ann. Stat. ch. 68, sec. 52(a) (Smith-Hurd). It was a provision designed to free the guardians from these limitations of State law and not a restriction on the present use of the gift property imposed by the donor. As a matter of fact, the provision had the effect of *removing* a limitation and not of *imposing* one on the immediate use of the property for the minors' benefit.

That the guardians so interpreted the "condition" of the gifts is shown by the character of the expenditures made and reports filed with and approved by the appropriate courts. They ranged from allowances, to automobiles, clothing, airplane and bus fare, and tuition. And this without any showing that these were items "more expensive than his father can reasonably afford" which would justify dipping into the minor's estate under California Probate Code section 1504.

Some of the difficulty in this case arises from the fact that the donees are infants represented by guardians. This, however, does not necessarily convert the gift of a present interest into a future interest. As indicated in the Commissioner's brief: It was stated in Fondren v. Commissioner, 324 U.S. 499 (1944), that "The statute in this respect purports to make no distinction between gifts to minors and gifts to adults. If there is deferment in either case the exemption is denied." In Revenue Ruling 54-400, 1954-2 C.B. 319, it was stated that:

> An *unqualified* and *unrestricted* gift to a minor, *with* or *without* the appointment of a legal guardian, is a gift of a present interest; and disabilities placed upon minors by State statutes should not be considered decisive in determining whether such donees have the immediate enjoyment of the property or the income therefrom within the purport of the Federal gift tax law. . . . In the case of an *outright* and *unrestricted* gift to a minor, the mere existence or nonexistence of a legal guardianship does not of itself raise the question whether the gift is of a future interest. . . . It is only where delivery of the property to the guardian of a minor *is accompanied by limitations upon the present use and enjoyment of the property by the donee, by way of a trust or otherwise, that the question of a future interest arises.* . . . [Emphasis supplied.]

As we have indicated above the donor in this case imposed no restrictions or limitations on the present use and enjoyment of the property by the donees. The only limitations on the use of the property were those imposed by State law and it has been recognized, both in Revenue Ruling 54-400, supra, and case law, that such limitations are not decisive and do not make a gift to a minor under guardianship a future interest.

In United States v. Baker, 236 F.2d 317, 320 (C.A. 4, 1956) it was stated:

> The trust agreements with which we are concerned here created no barriers to the present enjoyment by the infants of the trust fund beyond those which are established by the laws of North Carolina. Indeed, the agreements actually remove certain of these barriers, since if a guardian were to be appointed his use of the trust funds for the benefit of the infant must be subject to approval by the court having jurisdiction of the subject matter; whereas, by the express provisions of these trust agreements, the trustee, although empowered to deal with the funds as if he were guardian of the infants, is not required to secure approval of his acts by any court. As was said by the Supreme Court in the case of Fondren v. Commissioner, infra [324 U.S. 18, (1945)], "the crucial thing" in determining whether a gift is one of a future interest in property "is postponement of enjoyment." Here the right of the beneficiaries to present enjoyment of both the corpus and the income is not different from what it would be if the gifts had been made directly to each

of them, or to a guardian for their benefit. There is no magic in mere words. These gifts to a trustee, since they conferred on the beneficiaries the same right to present enjoyment which they would have had if the gifts had been made to a guardian for them, must be judged by the same standard as that applied to gifts made to a guardian.

And in Kieckhefer v. Commissioner, 189 F.2d 118 (C.A. 7, 1951) reversing 15 T.C. 111 (1950), the court said:

> As heretofore shown, the fallaciousness of the Commissioner's contention is the failure to distinguish between restrictions and contingencies imposed by the donor (in this case the trust instrument), and such restrictions and contingencies as are due to disabilities always incident to and associated with minors and other incompetents. As to the former, it is authoritatively settled that a gift *upon which the donor imposes such conditions or restrictions* is of a future interest. In the latter, such restrictions as exist are imposed by law due to the fact that the beneficiary is incapable of acting on his own. It is our view, and we so hold, that such restrictions do not transform what otherwise would be a gift of present interest to one of future interest. [Emphasis supplied.]

See also Commissioner v. Sharp, 153 F.2d 163 (C.A. 9), affirming 3 T.C. 1062.

It is to be noted that the gifts here were made directly to minors under guardianship. No trust or other person or entity was interposed between the donor and the guardian who stood in the shoes of the minor donee. This was not the case in Stifel v. Commissioner, 197 F.2d 107 (C.A. 2), affirming 17 T.C. 647 and Abraham M. Katz, 27 T.C. 783, where a result different from the result here was reached. However, in both of those cases the court indicated that had a guardian been appointed to exercise the children's rights or, "Had outright gifts been made directly to the beneficiaries or to guardians acting for them there would be no question that the transfers were of present interests." Abraham Katz, supra at 785. That, as we see it, is the case here.

The Commissioner further argues that the gifts were of future interests because the right of the donees to receive the stock or the income therefrom depended upon the exercise of discretion by the guardian. There is no merit in this contention. The only discretion lodged in the guardian was that provided for by State law — and the donor here had attempted to broaden that discretion. Whatever restrictions there were were those imposed by State law on *all* guardians. They were not imposed by the donor. If this argument of the Commissioner were carried through it appears that it would be impossible to make a gift of a present interest to a minor under guardianship, and that is not the law as we understand it.

The Commissioner further contends that petitioner intended these gifts to be of future interests and points to the fact that in making similar gifts of stock in other years no such "conditions" were attached. We conclude from the record, however, that the so-called conditions were inserted from an abundance of caution for the purpose of removing State law restrictions and making it unnecessary for the guardians to obtain prior court approval before making the expenditures which were made from the donated funds. We see no intent to give future interests rather than present.

We hold that the gifts here involved were gifts of present interests in property.

Reviewed by the Court.

NOTE

Other cases. On facts similar to the *Gilmore* case, the exclusion was denied on the ground that the minor benficiaries "acquired only 'future interests,' not subject to immediate capture," because at the time the gift was made no guardian was named in the instrument or had been appointed by the appropriate court to exercise the power of

termination on their behalf. Moreover, the minors were under the age of 14 and could not, under applicable state law, apply for the appointment of a guardian on their own. Stifel v. Commissioner, 197 F.2d 107 (2d Cir. 1952).

Is this view rejected by Rev. Rul. 54-400, quoted by the court in the *Briggs* case?

See Perkins v. Commissioner, 27 T.C. 601 (1957), where the Internal Revenue Service denied the gift tax exclusion to a trust under which the minor beneficiary, his parents, or a guardian (if one was appointed) could demand the corpus and accumulated income at any time. It is not clear whether the Service took the position that Rev. Rul. 54-400 is inapplicable to gifts in trust, or based its disallowance on the fact that in the particular case the parents' wealth made an exercise of the power highly unlikely or on some other circumstance. The Tax Court held that the $3000 exclusion was applicable (though suggesting that if the power to terminate the trust had been vested *solely* in the minor beneficiary and a nonexistent guardian, it would follow *Stifel* rather than *Gilmore*); one judge dissented.

If the taxpayer gives an electric train or an imported sports car to his son, warning that it will be taken away if he misbehaves, has he made a gift, or a revocable transfer? If a gift, is the exclusion allowable?

HERR v. COMMISSIONER

35 T.C. 732 (1961)

RAUM, Judge: In issue are gift tax deficiencies determined against petitioners, husband and wife, for 1955. The facts have been stipulated. The question for decision is whether each petitioner is entitled to a $3,000 exclusion under section 2503 of the 1954 Code in respect of a 1955 transfer to each of four trusts established for the benefit of petitioners' minor grandchildren in 1954. The transfers in question were made by petitioner Robert F. Herr; his wife is involved herein only because she consented in her gift tax return to have one-half of her husband's gifts treated as having been made by her.

On August 23, 1954, the husband, referred to as the settlor, created four trusts, each by separate declaration of trust for the primary benefit of a different minor grandchild. The four declarations of trust were identical except for the designation, by name and sex, of the grandchild who was to constitute the primary beneficiary of the particular trust. Relevant provisions of one of the trusts are as follows:

"FIRST: Settlor hereby declares that he holds 425 shares of common stock of Philco Corporation (which he is at this time transferring to himself as Trustee hereunder), IN TRUST, as follows:

"(a) To pay the net income to Settlor's granddaughter, FRANCEAN H. HALLINGER, until her arrival at age thirty (30) and then to pay over to her the principal.

"(b) If Settlor's said granddaughter shall die before reaching age thirty (30) the principal shall be paid

"(1) To her surviving issue, per stirpes, or, if she leaves no surviving issue

"(2) In equal shares to her siblings living at her death and to the issue of any sibling then deceased, such issue to take, per stirpes, the share the deceased sibling would have received if living.

". . .

"THIRD: Trustee shall retain any share of income or principal payable to a minor, together with any income accruing thereon, and may invest and reinvest the same as in the case of other property comprising the principal of this trust and may apply so much of such income and principal as he deems necessary directly for the maintenance, support and education of the minor, or may pay the same to any person selected by him to disburse it, whose receipt shall be a com-

plete acquittance to Trustee therefor, without in any case any order of court or the intervention of any guardian. All unexpended sums of accumulated income and principal shall be paid to the minor at his or her majority or to his or her estate if the minor dies before majority."

On January 19, 1955, petitioner Robert F. Herr added to the corpora of the trusts by transferring to each trust certain corporate stock having a then fair market value of $16,070.31. The primary beneficiaries were then 6, 4, 3, and 2 years of age, respectively. In the case of each such transfer, the present worth at the date of the transfer of the right to receive the income from the transferred stock during the minority of the primary beneficiary was in excess of $6,000.

In their gift tax returns for 1955 each petitioner claimed four annual exclusions of $3,000 each. The Commissioner disallowed the exclusion on the ground that "Transfers to donor's four grandchildren are deemed to have been gifts of future interests for which no exclusions are allowed. Section 2503, Internal Revenue Code of 1954."

We dispose first of the contention that petitioners are entitled to the exclusions under section 2503(b) apart from subsection (c). Subsection (b), to the extent that it is relevant here, was derived from section 1003(b)(3) of the 1939 Code, and the decisions relating to the latter provisions are pertinent.

Plainly, as recognized by petitioners, the gifts of corpus represented future interests and could not comply with the requirements for the exclusion. However, a gift may be separated into its component parts one of which may qualify as a present interest so as to bring the statutory exclusion into play. Fondren v. Commissioner, 324 U.S. 18, 21. And petitioners contend that the income interest up to the majority of each grandchild is not disqualified as a "future interest". We disagree.

As appears from paragraph THIRD of each trust instrument, the trustee is directed to "retain any share of income or principal payable to a minor, . . . and may invest and reinvest the same . . . and may apply so much of such income and principal as he deems necessary directly for the maintenance, support and education of the minor . . . All unexpended sums . . . shall be paid to the minor at his or her majority . . ." That this provision requires the income interest in question to be classified as a future interest is made clear by Commissioner v. Disston, 325 U.S. 442, where the Court said (pp. 448-449):

"The language of the trust instruments directs that the income be accumulated during minority. The subsequent provision for payments for maintenance and support may be said to indicate a departure from the policy of accumulation only when necessary, in the reasonable discretion of the trustees. If that is the appropriate interpretation of the trust instruments, then little difference from the Fondren case is involved. Even in its practical working, the trustees did not find the necessary prerequisites for a steady application of all or any ascertainable part of the income for education, support and maintenance.

"But, even though the trustees were under a duty to apply the income for support, irrespective of outside sources of revenue, there is always the question how much, if any, of the income can actually be applied for the permitted purposes. The existence of a duty so to apply the income gives no clue to the amount that will be needed for that purpose, or the requirements for maintenance, education and support that were foreseeable at the time the gifts were made. In the absence of some indication from the face of the trust or surrounding circumstances that a steady flow of some ascertainable portion of income to the minor would be required, there is no basis for a conclusion that there is a gift of anything other than for the future. . . ."

To the same effect is Hessenbruch v. Commissioner, 178 F.2d 785 (C.A. 3).

Accordingly, we hold that petitioner is not entitled to the claimed exclusions under subsection (b) [of §2503] without the benefit of subsection (c). We therefore pass to the question whether subsection (c) is operative to allow the exemption under (b) which would not otherwise be available under the provisions of (b) standing alone.

Subsection (c) became part of our revenue law for the first time in 1954, and the legislative history discloses that it was in response to the difficulties arising in connection with the classification of a gift for the benefit of a minor as a present interest. H. Rept. No. 1337, 83d Cong., 2d Sess., p. 93; S. Rept. No. 1662, 83d Cong., 2d Sess., p. 127. However, as the foregoing report of the House Committee points out in its "Detailed Discussion of the Technical Provisions of the Bill" (p. A 322), the new provision merely "partially relaxes the 'future interest' restriction contained in subsection (b), in the case of gifts to minors, by providing a specific type of gift for which the exclusion will be allowed," and the question before us is whether the gifts herein are within the range of the new provision.

A superficial reading of subsection (c) would appear to exclude the present gifts from its coverage, for it requires that "the property and income therefrom" may be expended by or for the benefit of the minor prior to majority and to the extent not so expended will pass to the minor at 21 or to his estate or his appointee in the event of death before 21. And since the corpus of each trust which generates the income here in issue is payable to the beneficiary, pursuant to paragraph FIRST, only upon attaining the age of 30 (with provision for other disposition in the event of prior death), it may be argued, as is done by the Government, that subsection (c) is inapplicable. That argument would be sound if the term "property" were treated as the equivalent of the trust corpus in this case. If one were to consider only the naked words of the statute, that interpretation would be a reasonable one. However, we are satisfied, upon examining the gift tax provisions generally as they have been judicially interpreted, that such is not in accord with the intention of Congress.

As noted above, the Supreme Court has expressly recognized that a gift may be separated into component parts one of which may qualify as a present interest under the statute. Fondren v. Commissioner, 324 U.S. 18, 21; Commissioner v. Disston, 325 U.S. 442, 447. We think it highly unlikely that the draftsmen of the pertinent provisions of the 1954 Code were unaware of these decisions which loomed so large in so limited a field. Certainly, if the donor had made a gift of income only to each grandchild subject to the conditions set forth in paragraph THIRD, it would comply fully with the requirements of subsection (c), and the Government does not contend otherwise. Cf. Jacob Konner, 35 T.C. 727, decided this day.[1] The word "property" as related to that situation would refer to the entire subject of the gift. And it is difficult to see why such a gift should not similarly qualify as a present interest merely because it is coupled together with two other components (income from twenty-one to thirty and corpus at thirty) which are future interests. For, both the *Fondren* and *Disston* cases have made it clear that one component may satisfy the conditions for a present interest while another fails to do so. Accordingly, it is our opinion that when considered in this context Congress intended the word "property" to mean, not the corpus of a trust, but rather the totality of elements that go to make up the entire gift that is being considered for classification as a present interest. In this case the totality of those elements consists of all the income up to majority. In the aggregate all

[1] In the *Konner* case, the Commissioner explicitly treated a series of income payments for a maximum period of approximately 10 years as "property" within the meaning of section 2503(c) but contended that they failed to satisfy the requirements of those provisions for reasons that are not germane here.

such payments constitute the "property" in question, and since this "property" and the accretions thereto must be expended for the benefit of the donee prior to majority or paid over to the donee at twenty-one or to the donee's estate or appointee in the event of death prior to twenty-one, the requirements of subsection (c) are fully met. Otherwise, Congress would have intended the incongruous result of classifying such income payments up to majority as a present interest when not accompanied by a gift of corpus but as a future interest when the gift thereof is made in conjunction with a gift of corpus that fails to qualify. We cannot believe that it intended any such strange distinction, and we hold that the gifts of income up to majority satisfy the requirements of subsection (c).

NOTE

1. The *Herr* case on appeal. The decision of the Tax Court in *Herr* was affirmed on appeal, 303 F.2d 780 (3d Cir. 1962). The appellate court said, in part:

> To bring out our problem here, let us suppose this case: A settlor creates a trust, the income of which is to go to M, a minor, until M is twenty-one. When M is twenty-one the corpus of the trust is to be given to X. Can there be any doubt that in this case the income of the trust is a "present interest" to M as he receives the payments year after year? If we add an additional provision that the minor is to receive, until he is tweny-one, so much of the income as is necessary for his support and that any undistributed income and interest thereon is to go to him at twenty-one, does he not still have a present interest?
>
> If this is right, does it change the situation, if instead of the corpus going to X when M is twenty-one, it is to go to M when he is thirty? That is this case. We think the Tax Court was right in looking at this problem in the light of division of interest in the thing (corpus) in the way it did. The right to income during minority is a present interest; the right to income and principal after minority are future interests.
>
> If that conclusion is not correct we have a very incongruous set of results in the distinction between the right of a stranger to receive the future interest and the right to receive the future interest when it is to go to the one entitled to the income during his minority. [303 F.2d at 782.]

2. *Other aspects of §2503(c).* In the *Herr* case, the trustee was authorized to apply "so much of such income and principal as he deems neceessary . . . for the maintenance, support and education of the minor." What if this power was subordinate to a provision of state law (see the *Briggs* case, supra) forbidding the use of trust funds to support the trustee's minor children unless he is unable to support them with his own funds? Would §2503(c) apply if the trustee may use trust income only for the minor's medical expenses, college tuition, or extraordinary needs? According to Regs. §25.2503-4(b)(1), the trustee may have discretion over the amounts and the purposes of expenditures "provided there are no substantial restrictions under the terms of the trust instrument on the exercise of such discretion." What about restrictions on the timing of expenditures, e.g., a power to make expenditures only when the beneficiary reaches the age of 18?

In the *Herr* case, the trustee was authorized to spend both income and corpus for the beneficiary's benefit. Would the result have been the same if he had been denied the power to invade principal? See Weller v. Commissioner, 38 T.C. 790, 807-810 (1962) (non-acquiescence).

Would §2503(c)(2)(B) be satisfied if the principal and expended income are payable as the minor may appoint, if he dies before 21, but in default of appointment are to be paid to specified persons rather than to his estate? Note that in such a case the property would go to persons designated by the grantor if the minor dies before he is old enough to exercise a power of appointment. Does §2503(c)(2)(B) require, in other words, that the property must go either to the minor's estate or to persons whom he (rather than the grantor) designates? Even if the property is so payable, it will go to the child's intestate successors if he dies before he is old enough to make a will or exercise a power of

appointment; and he cannot select his intestate successors. See Regs. §25.2503-4; Heath v. Commissioner, 34 T.C. 587 (1960); Clinard v. Commissioner, 40 T.C. 878 (1963) (provision for distribution to minor's "next of kin"; held, not the equivalent of payment to his "estate").

In Rev. Rul. 60-218, 1960-1 C.B. 378, the Service ruled that a trust for a minor does not meet the requirements of §2503(c) if the trust instrument provides that the donee may compel immediate distribution on attaining the age of 21 or elect to extend the trust, in which event he will receive a distribution of one third of the corpus at 25, one third at 29, and one third at 33. In the absence of an election by the minor the trust is to continue on its own terms. The ruling provides, in part:

> The purpose of section 2503(c) of the Code is to allow the exclusion provided for in section 2503(b) if the property involved in the transfer to the minor is, under the provisions of the instrument of transfer, to pass to him as absolute owner when he reaches 21. The provisions of section 25.2503-4(b)(2) of the regulations are designed to permit the extension of the term of the trust by the donee upon such conditions as he may freely choose. This, of course, includes the right in the donee to extend the term of the trust upon conditions therein set forth by the donor but, in any event, the extension must be an act of the donee as absolute owner of the property.
>
> The provisions of the trust will not be considered as conferring upon the donee absolute ownership of the property upon his reaching the age of 21 if, under such provisions, he is required to perform some positive act upon reaching that age in order to receive the property. He must be given the unequivocal and unconditional right to receive the property without any necessity for affirmative action on his part. A power conferred, as in the instant case, upon a donee to require immediate distribution of the property to him upon attaining the age of 21 years does not meet the statutory requirement that the property must pass to him upon attaining the age of 21 years.

3. *Custodial arrangements.* It may be impracticable to register securities or other property in the name of a minor because banks and corporate transfer agents usually do not want to have to make decisions about the minor's competency or fear that instructions by the minor or his parents may be disaffirmed when the minor reaches the age of 21. Can the property be registered in the name of the parent or some other adult as "trustee," "custodian," etc., if no formal restrictions are placed on the minor's right to present use and enjoyment of the property? See Rev. Rul. 55-469, 1955-2 C.B. 519, stating that no trust is created where stock given to a grandchild is registered in the names of the minor's parents "merely because the State law does not permit securities to be registered in the names of minors." The ruling is concerned with an income tax question and expresses no opinion on the applicability of the $3000 gift tax exclusion.

A number of states have adopted statutes permitting stock transferred to a minor to be registered in the name of a "custodian" who is authorized to apply the principal and income to the support, maintenance, education, and general use and benefit of the minor, in such manner, at such time, and to such extent as the custodian deems suitable and proper. The unexpended property is to be delivered or paid to the minor at 21; if he dies before then, the property goes to his estate. Rev. Rul. 56-86, 1956-1 C.B. 449, rules that a transfer under a statute of this type is a completed gift and will qualify for the $3000 exclusion of §2503(b); see also Rev. Rul. 59-357, 1959-2 C.B. 212 (same principles applicable to Uniform Gifts to Minors Act and Model Gift of Securities to Minors Act). Does the exclusion apply because the gift qualifies under §2503(c)? If the transfer is made by the father to himself as custodian, why is the transfer a completed gift rather than a revocable transfer (see Burnet v. Guggenheim, supra p. 1007), in view of the custodian's power to apply the property to the minor's support, maintenance, and education — i.e., to expenses for which he is legally responsible? See Rev. Rul. 56-484, supra page 386.

4. *Relation of §2503(c) to non-qualifying gifts to minors.* Section 2503(c) describes "a certain type" of gift to a minor that will qualify for the gift tax exclusion, according to the Senate Report on the 1954 Code. S. Rept. No. 1622, 83d Cong., 2d Sess. 479.

This is interpreted by the Regulations to mean that §2503(c) is not exclusive. Regs. §25.2503-4(c) (a non-qualifying gift may be either a present or a future interest).

What are the meaning and effect of the following statement in the same report? "Where a child's guardian who has control over gifts to a child, is personally responsible for the support of a child, since he must provide for the current needs of the child, it would appear that a valid gift could only be for a child's future benefit." S. Rept., p. 127. In the *Stifel* case, supra, the court indicated that had a guardian been named or appointed to exercise the power to terminate the trust there involved, it "would then seem to be proper to consider the actual facts as to the father's influence on the guardian appointed."

Rev. 233 (1951).

SECTION G. COMPUTATION OF THE GIFT TAX

In addition to the annual exclusion for each donee, the donor is allowed a lifetime "specific exemption" of $30,000 (originally $50,000, reduced to $40,000 as of 1936 and to $30,000 as of 1943) to be taken in the year or years chosen by him. He may also deduct gifts to charities and other nonprofit institutions that qualify under §2522(a); in the case of nonresident aliens, however, only gifts to domestic institutions qualify. The tax schedule is cumulative, i.e., the tax bracket for the current year's gifts is governed by the aggregate sum of the net gifts in 1932 and all succeeding years. A tax is first computed (at current rates) on the aggregate sum of the net gifts for 1932 and subsequent years including the current year. Then a tax is computed on the same amount exclusive of the current year's net gifts. The difference is the tax due on the current year's gifts.

A gift of community property is treated as a gift of one half by the wife and one half by the husband, so that each spouse is entitled to a $3000 annual exclusion for each donee and to his or her own $30,000 lifetime exemption. For discussion of the analogous "split gift" and "marital deduction" provisions which apply to gifts of common law property by married couples, see page 1110 infra.

An example from the Regulations may clarify the computation procedure (Regs §25.2502-1(c)):

Example (2). A donor makes gifts (other than gifts of future interests in property) during the calendar year 1955 of $30,000 to A and $33,000 to B. Two exclusions of $3,000 each are allowable, in accordance with the provisions of section 2503(b), which results in included gifts for 1955 of $57,000. Specific exemption was claimed and allowed in a total amount of $50,000 in the donor's gift tax returns for the calendar years 1934 and 1935 so there remains no specific exemption available for the donor to claim for 1955. The total amount of gifts made by the donor during preceding years, after excluding $5,000 for each donee for each calendar year in accordance with the provisions of section 1003(b)(1) of the 1939 Code, is computed as follows:

Calendar year 1934	$120,000
Calendar year 1935	25,000
Total amount of included gifts for preceding calendar years	$145,000

The aggregate sum of the taxable gifts for preceding calendar years is $115,000, which is determined by deducting a specific exemption of $30,000 from $145,000, the total amount of included gifts for preceding calendar years. The deduction from the 1934 and 1935 gifts for the specific exemption cannot exceed $30,000 for purposes of computing the tax on the 1955 gifts even though a specific exemption in a total amount of

$50,000 was allowed in computing the donor's gift tax liability for 1934 and 1935. See paragraph (b) of §25.2504-1. The computation of the tax for the calendar year 1955 (following the step set forth in paragraph (a) of this section) is shown below:

(1) Amount of taxable gifts for year	$ 57,000
(2) Total amount of taxable gifts for preceding years	115,000
(3) Total taxable gifts	172,000
(4) Tax computed on item 3 (in accordance with rate schedule in paragraph (b))	31,725
(5) Tax computed on item 2 (using same rate schedule)	18,900
(6) Tax for year 1955 (item 4 minus item 5)	12,825

In its report on the Revenue Act of 1932, the House Ways and Means Committee explained the theory of the computation as follows:

The computation of the tax payable each year involves three operations, namely: (1) A computation of the tax at the graduated rates on all gifts (with certain express exceptions) made after the enactment of this Act, including gifts made in the current calendar year; (2) a computation of the tax at the graduated rates on the gifts made in the prior year or years; (3) the subtraction of the result of the second computation from that of the first. This computation results in a tax imposed on a cumulative basis. In short, the design is to impose a tax which measurably approaches the estate tax which would have been payable on the donor's death had the gifts not been made and the property given had constituted his estate at his death. The tax will reach gifts not reached, for one reason or another, by the estate tax.

The gift tax will supplement both the estate tax and the income tax. It will tend to reduce the incentive to make gifts in order that distribution of future income from the donated property may be to a number of persons with the result that the taxes imposed by the higher brackets of the income tax law are avoided. It will also tend to discourage transfers for the purpose of avoiding the estate tax.

An objection urged against the former gift tax (that imposed by the Revenue Act of 1924) was that it might be readily evaded by spreading the gifts over a period of years. Under that tax a person could in each year make gifts equal to the deductions, including the specific exemption, and thus escape the tax entirely. Where taxable gifts were spread over a number of years, the combined effect of the annual specific exemption and of the graduated rates resulted in the aggregate of the gift taxes imposed being much less than what the tax would have been had all the gifts been made in a single year. If a gift tax is to yield a material revenue it is necessary that it be imposed on a cumulative basis as is the proposed tax. Since the gift tax is an adjunct of the estate tax which is not restricted to transfers made within a single year, an effective gift tax must give consideration, so far as the rate of tax is concerned, to transfers made in prior years.

The theory upon which the gift tax is based is that the rate of tax is measured by all gifts made after the enactment of the bill. This scheme is adopted in order to tax gifts made over a period of years at the same rate as if they had all been made within one year. For a more effective administration and to secure prompt collection of the revenues, the bill provides that the tax shall be computed and collected annually. [H. R. Rept. No. 708, 72d Cong., 1st Sess., reprinted in 1939-1 C.B. (Part 2) 457, 477.]

NOTE

1. *Effect of rate changes.* In the computation above, the amount of $18,900 (line 5) representing a tax on the gifts for preceding years is not the amount *actually* paid in 1934 and 1935. The discrepancy results from the fact that when tax was paid for those years, the specific exemption was $50,000; moreover, the rates were lower and have been raised several times in the intervening years.

2. *Adjustment for errors in prior years.* What would be the result if the 1934 and

1935 gifts in the foregoing example had consisted of future interests in property and the donor had (innocently) taken exclusions of $5,000 each with respect to these gifts? Section 6501(a) provides that ordinarily the tax "shall be assessed within 3 years after the return was filed . . . and no proceeding in court without assessment for the collection of such tax shall be begun after the expiration of such period." (The period is extended to 6 years by §6501(e)(2) if items in excess of 25 per cent of the total amount of gifts shown on the return are omitted, and §6501(c) provides that there is no limit on an assessment if no return is filed or if a false return is filed.) It has been held that the running of the statute of limitations does not prevent a denial of the $5,000 exclusion to the 1934 and 1935 gifts in computing the tax liability for 1943. Commissioner v. Disston, 325 U.S. 442 (1945).

A taxpayer made transfers in 1943 that he did not report, erroneously believing that they were not subject to gift tax. He made taxable transfers in 1947, claiming for that year the entire specific exemption of $30,000. On discovering his 1943 error, he filed a return for that year, claiming the $30,000 specific exemption, and an amended return for 1947, eliminating the specific exemption. May he do so? Richardson v. Commissioner, 126 F.2d 562 (2d Cir. 1942) (amendment allowed where failure to take exemption resulted from honest mistake and it was likely that donor would have claimed the exemption in earlier year except for his mistake). What advantage would the taxpayer gain from the amendment? See also Ingalls v. Commissioner, 40 T.C. 751 (1963) (specific exemption not restored when gift was included in gross estate of spouse).

If the donor overvalued his gifts in earlier years and therefore exhausted his specific exemption unnecessarily, it has been held that he may later correct the overvaluation in computing the amount of the specific exemption left for use in subsequent years. Schuhmacher v. Commissioner, 8 T.C. 453 (1947); see also Lockard v. Commissioner, supra p. 1017. Can this decision be reconciled with the statutory injunction that the amount of the specific exemption is $30,000 "less the aggregate of the amounts claimed and allowed as specific exemption" in prior years, §2521? See §2504(c), enacted in 1954, under which the valuation used in computing the tax for a prior year is carried forward, if the statute of limitations has run and a tax was assessed or paid for the prior year.

CHAPTER 12

The Gross Estate: Property Owned by the Decedent at Death

SECTION A. INTRODUCTORY

In New York Trust Co. v. Eisner, 256 U.S. 345 (1921), the federal estate tax was attacked "as an unconstitutional interference with the rights of the states to regulate descent and distribution and as a direct tax not apportioned as the Constitution requires." The Court, through Mr. Justice Holmes, answered:

> The statement of the constitutional objections urged imports on its face a distinction that, if correct, evidently hitherto has escaped this Court. See United States v. Field, 255 U.S. 257. It is admitted, as since Knowlton v. Moore, 178 U.S. 41, it has to be, that the United States has power to tax legacies, but it is said that [the estate] tax is cast upon a transfer while it is being effectuated by the State itself and therefore is an intrusion upon its processes, whereas a legacy [i.e., inheritance] tax is not imposed until the process is complete. An analogy is sought in the difference between the attempt of a State to tax commerce among the States and its right after the goods have become mingled with the general stock in the State. A consideration of the parallel is enough to detect the fallacy. A tax that was directed solely against goods imported into the State and that was determined by the fact of importation would be no better after the goods were at rest in the State than before. It would be as much an interference with commerce in one case as in the other. Darnell & Son Co. v. Memphis, 208 U.S. 113. Welton v. Missouri, 91 U.S. 275. Conversely if a tax on the property distributed by the laws of a State, determined by the fact that distribution has been accomplished, is valid, a tax determined by the fact that distribution is about to begin is no greater interference and is equally good.
>
> Knowlton v. Moore, 178 U.S. 41, dealt, it is true, with a legacy tax. But the tax was met with the same objection; that it usurped or interfered with the exercise of state powers, and the answer to the objection was based upon general considerations and treated the "power to transmit or the transmission or receipt of property by death" as all standing on the same footing. 178 U.S. 57, 59. After the elaborate discussion that the subject received in that case we think it unnecessary to dwell upon matters that in principle were disposed of there. The same may be said of the argument that the tax is direct and therefore is void for want of apportionment. It is argued that when the tax is on the privilege of receiving, the tax is indirect because it may be avoided, whereas here the tax is inevitable and therefore direct. But that matter also is disposed of by Knowlton v. Moore, not by an attempt to make some scientific distinction, which would be at least difficult, but on an interpretation of language by its traditional use — on the practical and historical ground that this kind of tax always has been regarded as the antithesis of a direct tax; "has ever been treated as a duty or excise, because of the particular occasion which gives rise to its levy." 178 U.S. 81-83. Upon this point a page of history is worth a volume of logic.
>
> The inequalities charged upon the statute, if there is an intestacy, are all inequalities in the amounts that beneficiaries might receive in case of estates of different values, of different proportions between real and personal estate, and of different numbers of recipients; or if there is a will affect legatees. As to the inequalities in case of a will they must be taken to be contemplated by the testator. He knows the law and the consequences of the disposition that he makes. As to intestate successors

the tax is not imposed upon them but precedes them and the fact that they may receive less or different sums because of the statute does not concern the United States. [256 U.S. at 348-349.]

The federal estate tax was again upheld, against a farrago of additional contentions, in Heitsch v. Kavanagh, 200 F.2d 178 (6th Cir. 1952), cert. denied, 345 U.S. 939. See generally Eisenstein, Estate Taxes and the Higher Learning of the Supreme Court, 3 Tax L. Rev. 395, 397-408 (1948).

NOTE

1. *Income tax basis of inherited property.* In the income tax part of this book, it was pointed out that the "basis" to the recipient of property acquired by bequest, inheritance, or devise is its fair market value at the time of the decedent's death (or on the optional valuation date, if that date is elected, infra page 1335). §1014(b)(1); supra p. 146. According to the income tax regulations, this means the value of the property "as appraised for the purpose of the Federal estate tax" if the estate is subject to estate tax. Regs. §1.1014-3(a). Although this valuation, under the cases, does not preclude the heir or legatee from proving a higher value, it will at least be entitled to a presumption of correctness. Plaut v. Munford, 188 F.2d 543 (2d Cir. 1951); Rev. Rul. 54-97, 1954-1 C.B. 113 (estate tax value may be rebutted by "clear and convincing evidence," unless taxpayer is estopped by his previous actions or statements); see also Ford v. United States, supra page 875, to the effect that the heir is not subject to the doctrine of recoupment on using the true value after a lower value was employed in computing the estate's tax liability.

Because of its presumptive weight, a high estate tax value for property of uncertain or disputed value may be advantageous to the heir or legatee; and his immediate or eventual income tax savings may exceed the resulting additional estate tax. Would the executor violate his fiduciary duty to the estate if he voluntarily placed a high value on such property or accepted without contest a high valuation asserted by the government? Would it be improper for the heir or legatee to reimburse other persons interested in the estate to the extent that the additional estate tax burden would fall on them? See Pascal's Estate v. Commissioner, ¶63,336 P-H Memo T.C., involving an option owned by the decedent to produce a musical play and motion picture based on Shaw's "Pygmalion," which was valued at zero in the estate tax return. The government asserted a deficiency based on a value of $200,000, whereupon the estate claimed a value of $1,140,000. The explanation of this curious reversal of roles is, presumably, that the success of "My Fair Lady" made a high basis for income tax purposes worth more than the added estate tax. The court upheld the value used by the government in asserting the deficiency.

Although §1015(d), enacted in 1958, permits the donee's basis for property received by gift to be adjusted in certain situations to reflect the gift tax paid on the transfer, no such adjustment to reflect the federal estate tax is authorized. See Levy's Estate v. Commissioner, 17 T.C. 728 (1951). If property received by gift is later included in the donor's gross estate for federal estate tax purposes (e.g., because the gift was a transfer in contemplation of death), however, the donee's basis for the property is no longer governed by §1015 (property received by gift) and becomes subject to §1014 (property acquired from a decedent). Although the estate tax value may be less than the donor's cost, it will frequently be higher, in which event the shift in basis will be advantageous to the donee. Moreover, since the burden of the estate tax will not necessarily fall on the donee (infra p. 1360), he may get an increased basis at the expense of the decedent's other heirs. How is the phrase "property . . . required to be included in determining the value of the decedent's gross estate," as used in §1014(b)(9), to be interpreted if there is a compromise at the administrative level under which half the value of a gift is included? Must property have been *actually* included to bring §1014(b)(9) into play, or does it embrace property that should have been, but was not, included? Chirelstein, Some Aspects of Basis and the Proposed Regulations, 35 Taxes 151 (1957).

The fact that appreciated property takes on a "stepped-up" basis at death is important

to the estate planner, and it may also have an effect upon the liquidity of investments, especially those held by older persons. (Depreciated property takes on a "stepped-down" basis on the owner's death, but this fact is counterbalanced to a degree by the owner's power to sell during his lifetime if the income tax deduction for the decline in value will be useful to him.)

As indicated supra pages 486-487, President Kennedy's 1963 Tax Message recommended that the transfer of certain capital assets by gift or at death be treated as a realization of the net appreciation in such assets, subject to a number of exceptions and limitations. The House Ways and Means Committee recommended against enactment of this proposal, and also rejected an alternative proposal for a carryover of the decedent's basis for assets transferred at death.

2. *Income in respect of a decedent: §691.* Section 691 sets out special rules for the income tax treatment of "income in respect of a decedent." This term is not defined in the statute and its full reach is still unknown, but an example is a claim for unpaid wages held by the estate of a decedent who did not take the claim into income when it arose because he was on the cash basis of reporting income. Under §691, the estate must report income if it collects the claim; if it distributes the claim to a legatee, however, the income will be reported by the legatee when he collects it. It is important to note that §691 creates an exception to the usual rules (a) that inherited property takes on a new basis equal to its value at the date of death, and (b) that property acquired by bequest, devise, or inheritance is not taxable as income to the recipient (supra p. 144). Items that constitute "income in respect of a decedent" do not take on a new basis, and must be reported as income if and when collected by the estate or heir.

Section 691's method of taxing the income to the estate or the heir, depending on who collects it, was adopted in 1942 to replace the prior requirement (in force from 1934 to 1942) that such items be included (even though still uncollected) in the final income tax return of the decedent. The 1934-1942 method was objectionable because it piled up in the final return many items that might be collected only gradually, especially since the Supreme Court construed the 1934 statute very broadly in Helvering v. Enright's Estate, 312 U.S. 636 (1941).

In addition to preserving the taxable status of "income in respect of a decedent," §691 provides a correlative deduction for the federal estate tax that was paid on the item by the decedent's estate. Thus, to continue with the example of the unpaid claim for wages, the estate or heir would have taxable income on collecting the debt from the employer, but would be allowed to deduct the estate tax attributable to its inclusion in the decedent's estate. For more on the complexities of §691, see Davison's Estate v. Commissioner, 292 F.2d 937 (Ct. Cl. 1961); United States v. Ellis, 264 F.2d 325 (2d Cir. 1959); Windhorst, Income in Respect of a Decedent, 37 Taxes 1082 (1959); Irell, Income in Respect of Decedents as Affected by the 1954 Internal Revenue Code, 1955 So. Calif. Tax Inst. 535 (1955); Shaw, Tax Problems When an Individual Dies with Unrealized Income, 1959 id. 721; A.B.A. Section of Taxation, 1960 Program 105-110 (recommending conversion of §691(c) deduction to credit).

3. *Foreign real estate.* Until 1962, §2031(a) and §2033 provided that real property situated outside the United States was not includible in the gross estate. In 1962, this exemption was eliminated in the case of persons dying on or after July 1, 1964; for persons dying after October 16, 1962, and before July 1, 1964, the exemption was preserved, but only as to real property acquired before February 1, 1962.

The pre-1962 blanket exemption was based in part on supposed international custom, and partly on a policy of accommodating United States citizens living abroad for business reasons. See S. Rept. No. 558, 73d Cong., 2d Sess., reprinted in 1939-1 C.B. (Part 2) 621; Laird v. United States, 115 F. Supp. 931 (D. Wis. 1953). Repeal of the exemption was based partly on a view that it had led to foreign investments in foreign real estate in countries with low, or no, death taxes primarily for tax advantage, and that the enactment in 1951 of a credit for foreign death taxes (infra p. 1330) protected United States taxpayers against double taxation in this area and hence lessened the need for the exemption. H.R. Rept. No. 1447, 87th Cong., 2d Sess., reprinted in 1962-3 C.B. 405, 487. See generally Wender, Federal Estate Tax Treatment of Real Property Situated Outside the United States, 19 Tax L. Rev. 91 (1963).

4. *Double taxation.* United States citizens and resident aliens are taxed by §2031(a) upon "all property . . . wherever situated," and hence are subject to double taxation if they own property within the jurisdiction of another country. The burden of double taxation is partially mitigated by treaties with a number of foreign countries under which the country of citizenship or domicile agrees to allow the decedent's estate a credit for foreign death taxes paid on property having its "situs" in the other contracting country. Situs is defined by the treaties; the treaty with the United Kingdom, for example, provides that tangible property has its situs in the country where it is physically located, corporate shares in the country of incorporation, insurance proceeds, bonds, and bank deposits in the country of the owner's domicile, judgment debts in the country of recordation, etc. See Gornick, The Canadian and British Death Tax Conventions, 50 W. Va. L.Q. 55 (1946); Rado, Estate Tax Convention Between Great Britain and the United States, 2 Tax L. Rev. 479 (1947); Sweeney, Nonresident Estate Taxes Under the United States and United Kingdom Convention, 25 Taxes 903 (1947). Would it be more desirable for each of the treaty countries to tax only its own domiciliaries? See Griswold, The Canadian Death Tax Convention, 23 id. 402 (1945).

Because treaties have not been negotiated with all foreign countries imposing death taxes on U.S. citizens and resident aliens, and because in some instances the treaties do not produce complete relief against double taxation, Congress enacted in 1951 a statutory credit for foreign death taxes. This provision, §2014, permits the estate to credit against its U.S. estate tax liability, as a kind of down payment, the death taxes paid to any foreign country "in respect of any property situated within such foreign country and included in the gross estate." The situs rules to be applied are those prescribed by §§2104-2105 for determining the situs of property owned by a nonresident alien in computing his gross estate. There are several limitations on the credit; the principal one is that if the United States taxes the property at a lower effective rate than the foreign country, only the lower amount can be credited.

Where §2014 overlaps a treaty, the larger credit may be taken. For a detailed examination of the effect of §2014 and the Canadian treaty on Canadian investments by U.S. citizens and resident aliens, see Molloy and Woodford, Estate Planning Techniques and the Ownership of Canadian Securities, 62 Yale L.J. 147 (1953). These authors conclude: "Three different sets of situs rules — those laid down in the Convention, those under the Code, and those applicable to [the provincial death taxes of] Ontario and Quebec — must be mastered and applied when making inter vivos investments and when drafting wills. . . . Proper will drafting techniques can save as much as 14.8 percent of the total combined death taxes otherwise payable on a net Federal estate of U.S. $500,000, 7.8 percent in the case of a U.S. $1,000,000 estate, and 11.08 percent in the case of a U.S. $2,000,000 estate, without the slightest alteration in the substantive dispositive provisions of such will." 62 Yale L.J. at 169-170.

5. *Nonresident aliens.* In the case of a nonresident alien, the estate tax is imposed on the transfer of only "that part of his gross estate (determined as provided in section 2031) which at the time of his death is situated in the United States." §2103. In Burnet v. Brooks, 288 U.S. 378 (1933), the statute was upheld as to, inter alia, bonds of foreign governments and corporations owned by a British subject resident in Cuba, the basis of jurisdiction being that the bonds were in the possession of the decedent's U.S. agents. See Regs. §20.2104-1(a)(3), providing that the "written evidence of intangible personal property which is treated as being the property itself" (e.g., a corporate bond) is part of the gross estate if physically situated here; other debts are part of the gross estate only if the debtor is located in the United States. Under §2104(a), enacted in 1954, however, shares of stock of foreign corporations are not included in the gross estate, regardless of where the certificates are located.

The scope of §2103 is qualified by §2105(a), exempting life insurance proceeds, and by §2105(b), exempting "moneys deposited with any person carrying on the banking business" if the decedent was not engaged in business here at the time of his death. See also §2106(c) (certain U.S. bonds). For the estate tax status of property that is located in the United States only temporarily, see Delaney v. Murchie, 177 F.2d 444 (1st Cir. 1949). See also §2105(c), exempting from tax works of art owned by a nonresident alien if loaned for exhibition to a nonprofit gallery or museum. This exemption originally

applied only to works exhibited at the National Gallery of Art in Washington, 64 Stat. 576, and was apparently intended to protect a collection of paintings lent to that gallery by an 81-year-old Armenian art collector. See Coughlan, Mystery Billionaire, Life, Nov. 27, 1950, p. 81.

The estate of a nonresident alien is entitled to an exemption of only $2000 and its deductions are subject to special limitations, as set out in §2106. The estate may, of course, be entitled in the country of domicile to a credit for the United States tax, under the treaties mentioned supra, or under other provisions of local law. See Wurzel, Nonresident Aliens and Federal Estate Tax: A Legislative Problem, 40 Colum. L. Rev. 52 (1940).

Transfers by nonresident aliens are also exempt from gift tax under certain conditions, but the exemptions are not identical with those granted by the estate tax law. See §§2501(a), 2511(a), and 2511(b).

See Schneider, Aliens and the United States Estate and Gift Taxes, 35 Taxes 281 (1957).

RHODES' ESTATE v. COMMISSIONER

41 B.T.A. 62 (1940)

[When the decedent, Mamie D. Rhodes, died on January 22, 1934, she owned 1000 shares of common stock of International Shoe Company, inherited by her from her husband on his death in 1924. The government asserted that another 4000 shares (also originally owned by her husband), which were registered in her name following her husband's death and pledged by her as collateral for a debt, should have been included in her gross estate under §2033. The administrators of her estate contended that these shares were properly excluded, on the ground that her interest in them was limited to a life estate and terminated on her death. Following her death, there were certain state court proceedings relating to these shares, which are described below.]

BLACK, Judge. . . .

What was the decedent's "interest" in the property [under §2033] the value of which the respondent has included in the decedent's gross estate? The respondent contends that the decedent was the sole owner of all the property which she attempted to dispose of in her will, including the shares of International Shoe Co. stock assigned to her by her children on or about July 30, 1925, and that the two decrees of the Circuit Court of St. Louis County, Missouri, referred to in our findings, are not binding upon the Board as requiring a holding contrary to the respondent's determination.

Petitioners contend that the determination of the decedent's "interest" in the property in question is purely one of the determination of property rights, and, as such, is controlled by the two decrees of the local circuit court.

We agree with the petitioners' contention. If the decedent owned only a life estate in the International Shoe Co. stock assigned to her in 1925 by her children, no part of the value of such property so assigned should be included in her gross estate, only her own share of the stock which she inherited from her husband's estate, which was one-fifth [i.e., 1000 shares], should be included. Article 11 of Regulations 70, 1929 ed. and Regulations 80, 1934 ed., and article 13 of Regulations 80, 1937 ed., all provide: "Nor shall anything be included [in the decedent's gross estate] on account of an interest or an estate limited for the life of the decedent." * The determination of whether the decedent owned only a life estate in the property assigned to her in 1925 by her children or whether she owned an absolute interest therein is clearly a determination of property rights, and, as such

* This provision has been dropped from the Regulations, but there is no reason to believe that this was intended to be a change of substance. — ED.

is controlled by local law. Poe v. Seaborn, 282 U.S. 101; Tyler v. United States, 281 U.S. 497; Freuler v. Helvering, 291 U.S. 35; Blair v. Commissioner, 300 U.S. 5; . . .

The Circuit Court for the County of St. Louis, State of Missouri, Division No. 2, after a full hearing in the matter, decreed on March 21, 1935, that the assignment executed by the children on July 30, 1925, "be and the same is hereby reformed as of the date of its execution to read" that the children "hereby jointly and severally grant, transfer and assign to our said mother, Mamie D. Rhodes, an estate, for her life only, in and to our joint and several interests in said estate of Taylor Rhodes, deceased. . . ." The assignment as reformed also provided that upon the death of Mamie D. Rhodes "that certain life estate which we hereby assign to her shall terminate and our said joint and several interests shall thereafter be held and owned by us as if this instrument had not been executed."

There is no evidence that this decree was obtained for the purpose of defeating any Federal estate tax; or that it was obtained by collusion. Such evidence as we do have points to the fact that it was a decree rendered after there was a hearing on the merits and was not a mere consent decree. The respondent has placed in evidence before us the testimony of Leona Kemp, who testified at the hearing before the local circuit court held on March 15, 1935. The substance of her testimony was that she was the secretary to W. E. Baird, the attorney who prepared the original assignment; that Baird had since died; that prior to the preparation of the assignment she remembered seeing "Mr. and Mrs. Paul Rhodes and Mr. Hugh Rhodes" at Baird's desk, which was adjacent to her own; that she "heard Mr. Paul Rhodes tell Mr. Baird he wanted to have him draw up a document whereby they could give their share of the estate to their mother for the time of her life, and Mr. Baird made a notation on his calendar pad"; that about four or five days later, Baird placed a paper written in longhand on her desk and asked her to copy it; and that the paper thus handed to her was the original assignment. All of the evidence before us, including recitals in the decree itself, indicates that the decree was rendered after a hearing on the merits and was in every respect regular. It was a decree adjudicating property rights. There is no evidence that it was ever modified or reversed, and, upon the authority of the above cited cases, it must be taken as establishing conclusively that the children assigned to their mother only a life estate in their interest in their father's estate.

Shortly after the reformation decree J. Jackson Rhodes and Hugh D. Rhodes, individually, and as executors and trustees under the will of Mamie D. Rhodes, deceased, filed a suit in the Circuit Court of the County of St. Louis, State of Missouri, May term, 1935, against Paul T. Rhodes, individually and as one of the trustees under the will of Mamie D. Rhodes, deceased, and Mary B. Rhodes, praying "for a decree of this court determining the ownership of all of the property held in the name of Mamie D. Rhodes at the time of her death on January 22, 1934, as between the estate of said Mamie D. Rhodes on the one hand and the plaintiffs and defendants herein on the other, and for such other and further orders and decrees as to the court may seem just and proper." The circumstances surrounding this suit are fully set out in our findings and need not be repeated here. Suffice it to say that on June 5, 1935, the court handed down its decree, in which it gave full faith and credit to the decree of the Circuit Court of the County of St. Louis, Division No. 2, heretofore mentioned and discussed.

It is our opinion that the two decrees in evidence before us establish conclusively that the decedent did not own outright any more than one-fifth of the 5,000 shares of common stock of the International Shoe Co. which the respondent has included in her gross estate and we have so found in our findings of fact. Her "interest" in the remaining four-fifths of the 5,000 shares was a life interest, which

ceased with her death, and under the above cited provisions of the respondent's regulations it was error for the respondent to include as a part of the decedent's gross estate the value of 4,000 shares, amounting to $194,000. . . . Even if it should be held that the second court decree rendered by Division No. 3, June 5, 1935, was a consent decree because it followed substantially the lines of a written agreement which had been previously entered into by the parties, nevertheless, the first court decree of Circuit Court No. 2, reforming the original instrument of transfer, was not a consent decree and settled the question as to ownership of the International Shoe Co. common stock and we are bound by it.

The respondent stresses the importance of the fact that the decedent, after the original assignment from her children in 1925, thereafter treated the property as her own. It is true that she so testified in the affidavit* referred to in our findings: that she actually sold 3,000 shares of the stock; that she pledged the remaining stock on loans; and that she attempted to dispose of all the stock in her will. As we look at this case, those were the facts for the local circuit court to consider in arriving at its decision in the matter. We may not assume that it did not do so. The decree having been rendered by a court of competent jurisdiction in a suit between adverse parties after a hearing upon the merits, we feel that we are bound by it. Whether the decree ever should have been rendered under the evidence is not a matter for us to decide. The question of property rights there decided is no longer an open question for the Board or the Federal Courts to consider. Freuler v. Helvering; Blair v. Commissioner; Sharp v. Commissioner, all supra.

The conclusion which we here reach is not contrary to our recent decision in Estate of Arthur D. Forst, 40 B.T.A. 876. In that case we held that a decree of the Orphans' Court of Mercer County, New Jersey, approving a certain claim against the estate was not binding upon the Board as to whether the claim was deductible under section 303 of the Revenue Act of 1926, in arriving at the net estate.† The question was altogether different from the one we have here to decide. Congress has established its own criterion as to what claims are deductible. Cf. Lyeth v. Hoey, 305 U.S. 188.

In view of our holding on the first issue, we need not decide the second issue.

Reviewed by the Board.

Decision will be entered for the petitioners.

STERNHAGEN, dissenting.

I do not think that this Board is universally bound by a decree of a state court without regard for the circumstances in which it is rendered. The record in this proceeding does not prove that there was a substantial controversy in which the mother or her estate was unsuccessful in establishing that when she died she owned the International shares and in which the children established against opposition that she had but a life estate. On the contrary it proves that the state court decree was the sanction of a mutually satisfactory agreement in which no one — the administrator ad litem, the creditors, the heirs and legatees, or anyone else — was adversely interested. Whether that was an arrangement deliberately aimed at the Federal Government's tax interest in the decedent's estate, it is not possible to say; but that still leaves it less than an adversary proceeding resulting in a judicial decree immune to Federal question. Generally I think my brother

* In connection with the settlement of her husband's estate tax liability, the decedent had filed an affidavit that her children had assigned to her their interests in his estate and that she was the sole person interested in her husband's estate. 41 B.T.A. at 62. — ED.

† The corresponding provision of the 1954 Code is §2053(a), allowing a deduction for such claims against the estate "as are allowable by the laws of the jurisdiction . . . under which the estate is being administered." — ED.

Opper* has correctly analyzed the state court proceedings and shown the fallacy of recognizing the decree as binding here.

NOTE

1. *Effect of local adjudications.* In affirming, the Court of Appeals for the Eighth Circuit (Helvering v. Estate of Rhodes, 117 F.2d 509, 510 (1941)) said:

> We are not unmindful of the argument for the Commissioner that instances may arise in which "the effect of accepting decrees of state courts as binding determinations of issues of fact presented in federal tax cases . . . would frequently be more undesirable" and that "the federal revenue could suffer considerably if the Commissioner were bound . . . in determining the taxability of the interests involved." But here an administrator ad litem was duly appointed and empowered to defend the estate of Mamie D. Rhodes, deceased, against an adversary suit. There is no evidence of any fraud or collusion or failure on the part of the administrator ad litem to perform his duty to defend the estate in good faith. Whether, if there had been such evidence, the Board of Tax Appeals could have disregarded the state court decree, it is not necessary to decide. The court had jurisdiction of the parties and the subject matter and the Board rightly held that the state court decrees were binding and determinative of the ownership of the property involved, and that ownership was not in Mamie D. Rhodes at the time of her death. See Blair v. Commissioner, 300 U.S. 5 (1937) and Sharp v. Commissioner, 303 U.S. 624 (1938), reversing per curiam 91 F.2d 802 (C.C.A. 3d 1937).

A established a testamentary trust, directing that the income be distributed "at such times and in such amounts as [the] trustee shall deem best" equally to B, C, and D. At B's death, the trustee held a substantial sum of accumulated, undistributed income. Thereafter, this sum was distributed by order of the probate court to C and D, who were the residuary beneficiaries of both A and B, as "the only persons interested in said [A's] estate." Does this order preclude an independent finding by the Tax Court that one third of the accumulated trust income was an asset of B's estate? Earle v. Commissioner, 157 F.2d 501 (6th Cir. 1946), cert. denied, 330 U.S. 882 (1947). See First-Mechanics National Bank v. Commissioner, 117 F.2d 127 (3d Cir. 1940); Commissioner v. Childs' Estate, 147 F.2d 368 (3d Cir. 1945); Krag v. Commissioner, 8 T.C. 1091 (1947). Does an appeal guarantee that a proceeding is adversary? Kelly's Trust v. Commissioner, 168 F.2d 198 (2d Cir. 1948).

Is there a difference in effect between a state court's findings of fact and its conclusions of law? Would it be feasible to permit or to require the United States to intervene in litigation that will affect the tax liability of the parties?

2. *Informal transfers during decedent's life.* If property (e.g., cash or securities) is found in the decedent's safe-deposit box with evidence that he intended to transfer it during his life to a donee, is it to be included in his estate under §2033 if the transfer was ineffective under local law (e.g., for want of delivery) but excluded otherwise, or is federal law controlling? See Richardson v. Commissioner, supra page 1011. If the transfer was effective under local law, should any significance be attached to the decedent's failure to file a federal gift tax return or to his practice of reporting the income from the property on his own federal income tax return? See Mortimer's Estate v. Commissioner, 17 T.C. 579 (1951); Sizer v. United States, 65 Ct. Cl. 450 (1928). If the subject of the alleged inter vivos gift was an interest in a family partnership, must it be included under §2033 if the transfer is ineffective for federal income tax purposes (supra p. 387)? See Aldrich v. Usry, 211 F. Supp. 330 (E.D. La. 1962); Kihchel v. United States, 105 F. Supp. 523 (W.D. Pa. 1952).

For an example of a successful claim that husband and wife were engaged in a business and professional partnership, although they had no formal agreement and kept no partnership accounts, with the result that only one half of the property held in the hus-

* The dissenting opinion of Judge Opper, in which Judges Hill and Disney joined, is omitted. — ED.

band's name or in joint bank accounts was included in his gross estate under §2033 on his death, see United States v. Neel, 235 F.2d 395 (10th Cir. 1956). The court reviewed the facts at length, and summarized as follows:

> Here, immediately after their marriage, [the decedent and his wife] pooled their cash and other property. Thereafter, each made substantial contributions of labor and services to their joint undertakings in farming, business, and the practice of law. On occasions they engaged in separate activities, but always the earnings from such separate activities were placed in their joint bank accounts. Each exercised authority, control, and management over the various business endeavois in which they jointly engaged. Each contributed substantial vital services in carrying on their joint undertakings. Moneys that came to each of them through inheritance were placed in the joint bank accounts. Each had authority and in fact did draw checks on their several bank accounts.
>
> In Commissioner v. Culbertson [supra p. 388], the court laid down the following test: ". . . whether, considering all the facts — the agreement, the conduct of the parties in execution of its provisions, their statements, the testimony of disinterested persons, the relationship of the parties, their respective abilities and capital contributions, the actual control of income and the purposes for which it is used, and any other facts throwing light on their true intent — the parties in good faith and acting with a business purpose intended to join together in the present conduct of the enterprise. [337 U.S. at 742.]"
>
> There was no express agreement with respect to the division of profits and losses, but the capital contribution of each was approximately equal, and the services rendered by each were approximately equal. Losses incurred in the operation of one of the hardware stores decreased the capital account, and, no doubt, the joint bank accounts. They made no distribution of profits to themselves individually, but continued to accumulate their joint and several earnings in joint bank accounts and other capital accounts.
>
> We are of the opinion that it may be reasonably and fairly implied that [the decedent and his wife] agreed to contribute capital, to contribute substantial services, and to jointly manage and carry on as partners their several farming, business, and professional enterprises, and to share equally in the profits and losses realized as bona fide partners.
>
> Accordingly, we conclude that the findings of the trial court were not clearly erroneous and that the judgment should be and it is affirmed. [235 F.2d at 400-401.]

Is property includible if the decedent held title as trustee for the benefit of others? If he was the beneficial but not the record owner? Regs. §20.2033-1(a). What of property transferred to the decedent to hinder, delay, or cheat the transferor's creditors? Of property so transferred by the decedent? See McCann v. Commissioner, 87 F.2d 275 (6th Cir. 1937). An inter vivos transfer by the decedent may be vulnerable for various reasons (the transferor's minority, mental incapacity, and so on); conversely, the decedent may have received property in a tainted transaction. Should taxability turn on whether the transfer was "void" rather than "voidable"? On whether the transferor or only his creditors may recover the property? On whether an action for its recovery has or has not been brought by the decedent's executor (or by the transferor against the executor)? Safe Deposit & Trust Co. v. Tait, 54 F.2d 383 (D. Md. 1931), 70 F.2d 79 (4th Cir. 1934).

For gift tax problems in this area, see page 1011 supra.

SECTION B. PROPERTY OWNED BY DECEDENT AT DEATH: §2033

BARR'S ESTATE v. COMMISSIONER
40 T.C. 164 (1963)

[The decedent's widow received a "wage dividend death benefit" of about $4500 from his employer, Eastman Kodak Company, under the following circumstances: The directors of Kodak were authorized by the shareholders to pay "wage dividends" in any year in which a dividend was paid on the common stock, if in the directors' opinion the corporation's cash position and earnings warranted such action, and wage dividends were paid in every year but one during the period 1912-1961. In November, 1957, 8 months after the decedent's death, the Kodak directors declared such a "wage dividend" for all employees on the payroll as of the end of 1957, based on the employee's wages for the 5 preceding years, to be paid in March, 1958. If an employee died after the end of 1957 but before the payment date in March, 1958, the "wage dividend" was paid to his estate as a matter of right. If he died before the end of 1957, his estate was not entitled to a wage dividend; but it was the company's practice to pay a "death benefit wage dividend" in such cases to the employee's spouse, children, or parents, and the company had regularly informed its employees that "the immediate survivors of Kodak people may expect" such a death benefit. In each such case, there was an investigation to determine whether "the circumstances of the deceased employee's family" justified payment; usually, but not always, a death benefit was paid equal in amount to the wage dividend that the employee would have received had he survived to the end of the year. From time to time, the company altered the eligibility rules for wage dividends; for example, in 1956 employees whose compensation exceeded $40,000 were made ineligible.

[The decedent's widow also received a "salary death benefit" of about $1750, under a company practice of paying an amount equal to the salary that would have been earned by a deceased employee during the balance of the pay period in which he died. The decedent was paid at 4-week intervals; he died at the end of the first week of his pay period and the payment was equal to 3 weeks' salary. The company's policy in paying "salary death benefits" was the same as its policy in paying "wage dividend death benefits," namely, payment was not guaranteed but depended on an exercise of judgment based on an investigation of the family's circumstances.]

PIERCE, Judge:

I. The first issue relates to the so-called "wage dividend" death benefit which Eastman Kodak Company paid to decedent's widow in March 1958 (approximately 1 year after decedent's death). And the question presented with respect to this, is whether the amount of such payment is includable in the gross estate of the decedent for Federal estate purposes, under either section 2033 or section 2039 of the 1954 Code. . . .

It will be observed that [§2033] relates only to *interests in property* which the decedent had at the time of his death. And, as the Supreme Court pointed out in the leading case of Knowlton v. Moore, 178 U.S. 41, the justification for the Government's power to subject such interests to the Federal estate tax rests on the principle that such interests *pass* from the decedent at death, and that the estate tax is an excise tax on the privilege of transmitting property at death to the

survivors of the decedent. To the same effect see New York Trust Co. v. Eisner, 256 U.S. 341.

It is our opinion that, in the present case, the decedent did not have at the time of his death any property interest, either in the "wage dividend" which Eastman's board of directors subsequently declared for the benefit of its living eligible employees (after it had declared a cash dividend for the benefit of its stockholders), or in the related death benefit which these directors then authorized to be paid to decedent's widow. Accordingly, there was no such interest which passed, or could have passed, from him to his widow; and hence no such interest upon which the excise tax on the privilege of transmitting property at death may be imposed under section 2033.

Both this Court and others have recognized that there is a distinction between *rights* of an employee to death benefits, and, on the other hand, mere *hopes* and expectancies on the part of an employee that death benefits may be paid. Thus, in the early case of Dimock v. Corwin, (D.C., E.D.N.Y.) 19 F. Supp. 56, affd. on other issues (C.A. 2) 99 F.2d 799, 306 U.S. 363, it was shown that the Standard Oil Company had adopted an annuity and insurance plan, subject to withdrawal or modification by Standard at its discretion, under which death benefits roughly equal to a year's salary of an employee might be paid to the widow of a deceased employee. The District Court concluded that the decedent had "only the right to render it possible for [his surviving spouse] to receive a grant from the Standard Oil Company, and that this did not constitute property of his" under the then applicable statute, section 302 of the Revenue Act of 1926, a statutory provision cognate to section 2033 of the 1954 Code.

In a more recent case decided by this Court, Estate of Albert L. Salt, 17 T.C. 92 (1951), the facts were closely similar to those of the instant case. There, the decedent was employed by Graybar Electric Company, which had a "Plan for Employees' Pension, Disability Benefits and Death Benefits," under section 7 of which it was provided that the company could, in the discretion of a committee appointed by the company to administer the plan, authorize death benefit payments to the wife, husband, or dependent relative of a deceased pensioner of the company. The company paid a death benefit to decedent's widow of $40,000. The company had paid similar death benefits in every case over a 15-year period, where there had been a qualified beneficiary of a deceased pensioner. We held that the respondent had erred in including said $40,000 in the decedent's gross estate; and we stated in part as follows:

> At the time of his death decedent had no vested interest in the $40,000 nor did his widow have an enforceable right to the $40,000. Whether she would receive it was entirely within the discretion of the committee administering the Plan. Since the decedent's "interest" in the $40,000 was a mere expectancy that his widow would receive the payment, it is not includible as a part of his gross estate under [§2033] of the Code. See Dimock v. Corwin, . . . [17 T.C. at p. 100].

Cases to the same effect are Estate of Emil A. Stake, 11 T.C. 817; Estate of William S. Miller, 14 T.C. 657; Estate of M. Hadden Howell, 15 T.C. 224.

Authorities reaching differing results on the basis of the decedents having *enforceable vested* rights to have their employers pay death benefits to survivors, are typified by Estate of Charles B. Wolf, 29 T.C. 441, 447, in which case we stated:

> At the date of decedent's death he had *enforceable vested* rights in the three trusts [one profit-sharing trust, and two pension trusts], procured by the rendition of services and by continuing in the employ of the respective corporations. He could be deprived of

those rights only by deliberately terminating his employment or being discharged for cause. He had unlimited power to designate or change beneficiaries, and payments to his named beneficiaries were obligatory. The rights thus created were valuable property rights, capable of valuation, and in fact valued by the parties. The decedent's death was the decisive event that resulted in the passage of those rights to the beneficiary. It seems clear to us that they are includible in his gross estate either under the sweeping provisions of [§2033] or under the more specific provisions of [§2041, dealing with powers of appointment]. Cf. Estate of William L. Nevin, 11 T.C. 59.

This case is to be sharply distinguished from cases such as Dimock v. Corwin, . . . where the employer retained the unfettered right to withdraw or modify the pension plan and where it was thought that the employee's interest could not rise above that of a mere expectancy. . . . [Citing the *Salt, Stake, Miller* and *Howell* cases, supra.] [Emphasis supplied.]

We are convinced that in the instant case, decedent had no more than a hope or expectancy that his surviving spouse might receive a wage dividend death benefit. There were so many events that had to occur before such hope could be realized that we find it impossible to conclude that, at the date of death, he had any property right which he could pass to her. Eastman had to realize earnings and profits for the year 1957; the directors, in the exercise of their discretion, had to declare a dividend to its stockholders; the directors, in further exercise of their discretion, had to declare a wage dividend payment to those employees who were alive and employed by the company on the last day of the Kodak year; and the directors, in the still further exercise of their discretion, had to approve a wage dividend death benefit to the widow of the instant decedent who had theretofore died. Moreover, the company, in its Rules of Eligibility and Participation and in the pamphlet distributed to its employees, made it clear that whether it might approve a wage dividend death benefit to the estate or beneficiary of a deceased employee was solely within its "option"; and that such situation would be distinguishable from that of an employee who had continued to live until after the close of the Kodak year for which the wage dividend was declared, and who thereby had acquired a "right" to the same.

We hold that section 2033 is not here applicable.

[Discussion of §2039 omitted; see page 1232 infra.]

II. The second issue is whether the salary death benefit which was paid to the decedent's widow is includable in the decedent's gross estate, under . . . §§2033 or 2039.

It is our opinion that what we have stated with respect to each of these sections in our consideration of the wage dividend death benefit is equally applicable to this salary death benefit. . . .

GOODMAN v. GRANGER

243 F.2d 264 (3d Cir. 1957), cert. denied, 355 U.S. 835

Before GOODRICH, KALODNER and STALEY, Circuit Judges.

KALODNER, Circuit Judge.

When does the federal estate tax attach?

More specifically stated, when does such tax attach to a decedent-employee's contractual right to annual deferred compensation payments from his employer, payable to his estate after his death?

That problem, of first impression, is presented by this appeal by the government from a judgment in favor of the taxpayer, Eleanor D. Goodman, administratrix of the estate of Jacques Blum, deceased, in a suit brought by her in the District Court for the Western District of Pennsylvania to recover estate taxes and interest alleged to have been erroneously assessed and collected.

The District Court, subscribing to the taxpayer's contention, concluded as a matter of law that the decedent's contractual right was to be ". . . valued during decedent's lifetime and *at the moment before death* . . ." and made the factual finding that at such moment the contractual right was "valueless," for reasons which will subsequently be discussed. In its opinion the District Court stated "It must be admitted that if the value in the contracts is to be fixed *the moment after death*, then the Government is correct in its contention in this case." (Emphasis supplied.)

The undisputed facts may be summarized as follows:

The decedent, Jacques Blum, for several years prior to his sudden death of a heart attack at the age of 52 on May 2, 1947, was executive vice-president of Gimbel Brothers, Inc. ("Gimbels") in charge of its Pittsburgh store.

On October 19, 1944, June 1, 1945 and May 26, 1946, decedent entered into identical contracts of employment with Gimbel Brothers covering the years ending January 31, 1945, January 31, 1946 and January 31, 1947, respectively. Each contract provided for a basic salary of $50,000 per year, and for additional "contingent benefits" of $2,000 per year for fifteen years "after the employee ceases to be employed by the employer" by reason of death or otherwise. The post-employment "contingent payments" were to be made only if the employee duly performed the services agreed upon and did not engage in a competing business within a specified period after termination of his employment; and they were to be reduced if his post-employment earnings from a non-competing business plus the contingent payments exceeded seventy-five percent of his yearly average compensation under the contracts. Any of the fifteen annual contingent payments which fell due after the employee's death were to be paid to his estate, or to a nominee designated in his will.

The third contract for the period of employment ending January 31, 1947 was, by its terms, renewed on a month-to-month basis and was in effect at the time of decedent's death. At the latter time there was every prospect that he would continue to advance in his highly successful career in retailing.[1]

After the decedent's death Gimbels paid the $6,000 annual installments provided by the three separate contracts ($2,000 each) to the taxpayer in her capacity as administratrix as they became due. She filed with the Collector a timely federal estate tax return and included the three contracts at a value of $15,000. Upon audit of the return the Internal Revenue Agent in Charge, Pittsburgh, increased the value of the three contracts from $15,000 to $66,710.34, the present worth of $90,000, payable in equal annual installments of $6,000 a year over a period of fifteen years. The increase in the value of the contracts resulted in a deficiency of $15,958.18, including interest, which was assessed against and paid by the taxpayer, and for the recovery of which she brought the suit here involved.

At the trial the taxpayer offered the testimony of three witnesses to the effect that the three contracts created no property right having any market value in the decedent while he lived.

The government offered the testimony of one witness who testified that the

---

1 Each of the contracts provided for payment of amounts falling due after the employee's death, in the following language:

"6. Any of the fifteen (15) annual contingent payments which fall due after the death of the Employee shall be paid either (1) to such person as shall furnish evidence satisfactory to the Employer showing that under the last will and testament of the Employee or for other reason he is duly authorized in law to receive such payment, or (2) to such person as shall furnish the Employer with evidence of appointment as representative of the estate of the Employee. The receipt of any such person for such payments shall release the Employer of any further obligation in respect thereof. 'Person' as used in this Article 6 may include one or more individuals, trusts, firms or corporations."

deficiency assessment was based upon his conclusion that the contracts created in the decedent valuable vested interests, subject to being divested, and on that theory the contracts were considered by the government to have the marketable monetary value which it had determined and assessed.

The federal estate tax is imposed upon "the transfer" of a decedent's property, Internal Revenue Code [§2001], and the gross estate of the decedent is determined by including "the value at the time of his death of all property" to "the extent of the [decedent's] interest therein." [§2033.] Treasury Regulations [20.2031-1 (b)] provide that the measure of value for the purpose of determining the gross estate in federal estate taxation is the fair market value of the estate.

The sum of the taxpayer's position is (1) what is taxed is "the value" of the decedent's interest in his contract that "ceased by reason of death," not the value of what is received by the recipient (the administratrix); otherwise stated, "the value" of the decedent's interest in his contract was to be determined as "of the moment before death."

The government's position may be summarized as follows: (1) the estate tax is measured by the value of property transferred by death and here an absolute right to the fifteen deferred compensation payments passed by decedent's death to the taxpayer inasmuch as the possibility of forfeiture was extinguished by decedent's death; (2) the government properly valued the right to the deferred compensation payments in the same manner as an annuity for a term certain, *i.e.* at the commuted value in accordance with the applicable Treasury Regulations.

As earlier noted, the District Court agreed with the taxpayer's view. In doing so it stated:

> It seems clear under the authorities and the statute and the regulations that the value of the contract rights *is limited to the interest of the decedent during his lifetime.* That interest, under the testimony and by a fair preponderance of the evidence, is valueless. There was no fair market value on which to base a deficiency assessment. (Emphasis supplied.)

It may be noted parenthetically that the taxpayer's testimony as to lack of value, adverted to by the District Court, was premised on the circumstance that the employment contracts specified four contingencies which, if any of them had occurred, would have forfeited the decedent's right to the deferred compensation payments.

It is clear that the decedent's interest in the employment contracts was "property" includible in his gross estate under [§2033]. Determination of the time when that interest is to be valued is the crux of the dispute.

We have had the benefit of thorough discussions by both the government and the taxpayer of the nature of the federal estate tax. Both parties cited Knowlton v. Moore, 1900, 178 U.S. 41; Young Men's Christian Association of Columbus, Ohio v. Davis, 1924, 264 U.S. 47; and Edwards v. Slocum, 1924, 264 U.S. 61. The government cited them for the proposition that the subject of the tax is neither the property of the decedent, nor the property of the legatee, but rather the transfer of assets affected by death. The taxpayer emphasizes the language in these cases which supports the theory that what is taxed is the value of the interest that ceased by reason of death, not the value of what is received by the recipient. We are in accord with both of these general axioms which aid in clarifying the nature of the federal estate tax. However, the cases cited and the principles drawn therefrom are not decisive of the question posed by this case. While the nature of the tax has been discussed in numerous Supreme Court cases, the question of the proper time to determine the nature of a decedent's interest and the value thereof requires a more particularized analysis.

The taxpayer has ignored the very nature of the tax which it is urged is dispositive of this case. True, the tax reaches the "'. . . interest which ceased by reason of the death.'" Knowlton v. Moore, supra, at page 49, but the reference there was to the distinction between an estate tax and an inheritance tax. The inheritance tax is levied upon the individual shares of the decedent's estate after distribution to the legatees; the estate tax is imposed upon the total estate of the decedent which is transferred to the legatees. The estate tax has been characterized as "an excise imposed upon the transfer of or shifting in relationships to property at death." United States Trust Co. of New York v. Helvering, 1939, 307 U.S. 57, 60. The estate and inheritance taxes have the common element of being based upon the transmission of property from the dead to the living. New York Trust Co. v. Eisner, 1921, 256 U.S. 345. In Knowlton v. Moore, supra, the Supreme Court recognized this basic principle when it said at page 56:

> . . . tax laws of this nature in all countries rest in their essence upon the principle that death is the generating source from which the particular taxing power takes its being, and that it is the power to transmit, or the transmission from the dead to the living, on which such taxes are more immediately rested.

Since death is the propelling force for the imposition of the tax, it is death which determines the interests to be includible in the gross estate. Interests which terminate on or before death are not a proper subject of the tax. Assets may be acquired or disposed of before death, possibilities of the loss of an asset may become actualities or may disappear. Upon the same principle underlying the inclusion of interests in a decedent's gross estate, valuation of an interest is neither logically made nor feasibly administered until death has occurred. The taxpayer's theory of valuing property before death disregards the fact that generally the estate tax is neither concerned with changes in property interests nor values prior to death.[2] The tax is measured by the value of assets transferred by reason of death, the critical value being that which is determined as of the time of death.

As was so succinctly stated by Judge Hartshorne in Christiernin v. Manning, D.C.D.N.J. 1956, 138 F. Supp. 923, 925:

> There cannot be a decedent, till death has occurred. A decedent's estate is not transferred either by his will or by intestacy, till death has occurred. . . . And the decedent's interest in the property taxable is to be such interest "at the time of his death". . .

Here the employment contracts provided for additional "contingent" compensation of $6,000 per year for fifteen years to be paid to Blum or his estate after the termination of his employment by reason of death or otherwise. True, the right to these payments was forfeitable upon the occurrence of any of the specified contingencies. However, forfeiture as a result of the contingencies never occurred during Blum's lifetime, and any possibility of their occurrence was extinguished by his death. Gimbels has been making and the estate has been collecting the payments provided by the contracts. Valuation of the right to these payments must be determined as of the time of Blum's death when the limiting factor of the contingencies would no longer be considered. Death ripened the interest in the deferred payments into an absolute one, and death permitted the imposition of the tax measured by the value of that absolute interest in property.

In Mearkle's Estate v. Commissioner of Internal Revenue, 3 Cir., 1942, 129 F.2d

---

[2] Cf. Newell v. Commissioner of Internal Revenue, 7 Cir., 1933, 66 F.2d 102, for the effect of the death of a key officer and shareholder in a corporation upon the valuation of stock in the corporation included in his gross estate. Also, in valuing a partnership interest of a decedent, goodwill attributable to the decedent's personal efforts is not valued due to the decedent's loss to the partnership. Estate of Gannon, 1954, 21 T.C. 1073; Estate of Maddock, 1951, 16 T.C. 324.

386, we considered the proper method of valuing an annuity upon the death of the decedent which by its terms was payable to the decedent during his life and to his wife for her life. The criterion adopted was the purchase price of an annuity contract upon the life of the wife measured by her life expectancy on the date of her husband's death. There is no reference in this test to the husband's life expectancy upon the date of his death or to the joint expectancies of the decedent and his wife. See Christiernin v. Manning, supra. The value of decedent's interest in the annuity up to the time of his death is not considered, and, as in the situation here involved, death cuts off prior limiting factors.[3]

For the reasons stated the judgment of the District Court will be reversed with directions to proceed in accordance with this opinion.

NOTE

1. *Employee death benefits.* In Dimock v. Corwin, cited in *Barr's Estate,* the plan was subject to modification by the company prior to the employee's death, but not retroactively, so that the company was obligated to pay a benefit in accordance with whatever schedule of payments was in effect when the employee died. The court held:

> The right to nominate or designate the person to receive the death benefit could not have been levied upon to satisfy a judgment against the decedent during his lifetime; had he become bankrupt, his trustee could not have realized anything thereon for creditors, nor could it have been sold or assigned by the decedent because it was merely a privilege extended to him by his employer, which was subject to withdrawal or modification at any time, under the quoted terms of the plan. [19 F. Supp. 56, 59 (E.D.N.Y. 1937).]

In G.C.M. 27,242, 1952-1 C.B. 160, the Internal Revenue Service ruled that the gross estate of an employee included, under §2033, a death benefit payable under a profit-sharing and retirement plan under the following circumstances:

> Under the provisions of the profit-sharing and retirement plan in the instant case, all contributions to the plan are made by the company. Each year the company transfers 15 percent of its net income to the trustee of the plan and the trustee allocates the contribution to the accounts of the eligible employees for that year on the basis of compensation and length of service of such employees. Income of the trust property and any amounts forfeited by employees by reason of discharge or termination of employment are also allocated on the same basis. Upon the death of a participating employee prior to retirement, the participating interest of such employee is paid to the beneficiary or beneficiaries designated by him or, in the event that no beneficiary was designated by the employee, to his executors or administrators. The company reserves the right to terminate or amend the plan. Upon termination, all contributions cease and the trustee is required to pay, as promptly as possible, over to the participating employees, or their beneficiaries, their participating interests. No amendment to the plan is effective (*a*) which attempts to divert the assets held by the trustee to purposes other than for the exclusive benefit of the participating employees and their beneficiaries, or (*b*) which, without his consent, affects the right of any employee whose participating interest has already become payable to him. The employer has a right to amend the plan to eliminate the provision for the payment of a death benefit to employees dying prior to the receipt of any benefits under

[3] In Estate of Harper, 1948, 11 T.C. 717, cited by taxpayer, there were included in decedent's gross estate notes of insolvent makers who by reason of the receipt of legacies under the decedent's will became solvent. The Commissioner valued the notes at face value. The Tax Court held to the contrary, subscribing to the view that the estate tax was "measured by the value of the interest transferred or which ceases at death," viz., the actual value of the then insolvent maker's assets. The result reached is consistent with our approach in the instant case, although the language used by the Tax Court was perhaps something less than fortunate.

the plan so long as the amendment does not destroy the right of an employee or his designee to receive a death benefit which had already become payable. . . .

. . . it is possible prior to the death of a participating employee for the employer to destroy the right of an employee's designee to receive the death benefit provided under the plan. However . . . this office is now of the opinion that the mere possibility that an employer may withdraw, prior to the death of an employee, the right of the employee's designee to receive a death benefit does not indicate an absence of a property interest of the decedent in the right to designate a beneficiary of the death benefit. . . .

Accordingly, it is the opinion of this office that where an employee has the right to designate the beneficiary of a death benefit under a profit-sharing and retirement plan, the employee, at the time of his death, is in possession of such rights as constitute property within the meaning of [§2033] of the Internal Revenue Code, provided that prior to the employee's death the employer has not withdrawn the right of the employee to designate a beneficiary, and has not eliminated all death benefits. [The ruling also states that the benefits are includible in the gross estate under §2037 (transfers taking effect at death), §2038 (revocable transfers), and §2042 (life insurance proceeds).]

G.C.M. 27,242 also announced that the Internal Revenue Service would no longer follow Dimock v. Corwin.

See also Garber's Estate v. Commissioner, 271 F.2d 97 (3d Cir. 1959); Wadewitz' Estate v. Commissioner, 39 T.C. 679 (1963); Charleston National Bank v. United States, 221 F. Supp. 271 (S.D.W. Va. 1963) (following Dimock v. Corwin); Worthen v. United States, 192 F. Supp. 727 (D. Mass. 1961) (year's salary paid to employee's widow, under contract executed during employee's lifetime, held not includible under §2033).

For the impact of §2039 on certain employee death benefits, see page 1232 infra.

2. *Social security benefits.* Social security benefits paid upon the death of an employee are not part of the gross estate, the Treasury has ruled, because:

. . . the decedent has no control over the designation of the beneficiaries or the amounts payable to them. The beneficiaries and the amounts payable to them are fixed by the provisions of the Social Security Act, as amended, and the payments are made directly to the beneficiaries. [E.T. 18, 1940-2 C.B. 285.]

Does this mean that if a minor dies before he is capable of making a will, his estate will not be subject to federal estate tax because he did not have an opportunity to choose his beneficiaries? If the power to designate a beneficiary is essential to estate tax liability for employee and social security death benefits, why is not that element supplied (even if the benefits are to be paid to persons selected by the employer or by Congress) by the decedent's decision to accept employment with a particular employer knowing that such benefits will be, or are likely to be, paid?

3. *Recovery for wrongful death.* In Rev. Rul. 54-19, 1954-1 C.B. 179, the Internal Revenue Service ruled that the estate of a decedent who died in an airplane crash did not include the executor's claim against the carrier for damages. The state wrongful death statute provided that the executor or administrator of the decedent could sue, but for the benefit of the decedent's intestate successors rather than for the benefit of his estate and legatees:

The decedent in his lifetime never had an interest in the right of action or in the proceeds. He did not create the right, it was created by statute and vested in the persons designated in the statute. Inasmuch as the decedent had no right of action or interest in the proceeds at the time of his death, nothing "passed" from the decedent to the beneficiaries. Accordingly, the amounts recovered by the beneficiaries would not be includible in the decedent's gross estate for Federal estate tax purposes.

What if the cause of action became part of the decedent's estate? What of a claim for pain and suffering during the decedent's last hours? Revenue Rul. 56-637, 1956-2 C.B.

600, applied the same principle to an award for death from occupational disease, paid under a workmen's compensation act, to the employee's dependents.

4. *Property of uncertain or disputed value.* Note that in Burnet v. Logan (supra p. 457), in which the court held that certain contract rights could not be realistically valued for income tax purposes, it implied that a lower standard is applicable — because it is now or never — in fixing an estate tax value. See Pascal's Estate v. Commissioner, ¶63,336 P-H Memo T.C. (option to produce a musical play based on Shaw's "Pygmalion," which resulted after the decedent's death in the production of "My Fair Lady"; held, option worth $200,000); Rev. Rul. 61-88, 1961-1 C.B. 417 (decedent's remainder interest in a trust, contingent on death of 44-year-old woman without issue, held includible at fair market value).

The Internal Revenue Service has ruled that the right of an attorney's estate to receive payment on a quantum meruit basis for legal services performed by the decedent under a contingent fee contract constitutes an interest in property within the meaning of §2033. (Under state law, in the event of the death of an attorney who was employed on a contingent fee basis, his estate is ordinarily entitled to recover the reasonable value of his services if the case is terminated successfully.) Rev. Rul. 55-123, 1955-1 C.B. 443. Since the right to collect on a quantum meruit basis arises only because of the attorney's death (and is contingent upon a successful termination of the litigation), does it come within the terms of §2033 ("property . . . to the extent of the interest therein of the decedent at the time of his death")? If it does, how can its value at the time of death be ascertained? See Duffield v. United States, 136 F. Supp. 944 (E.D. Pa. 1955); Estate of Nemerov v. Commissioner, ¶56,164 P-H Memo T.C.

See also Rodiek v. Commissioner, 33 B.T.A. 1020 (1936), excluding from the estate a claim against the United States for compensation for an erroneous seizure of property under the Trading with the Enemy Act; pursuant to a Senate resolution passed after the decedent's death, a proceeding was commenced in the Court of Claims, which was to report its findings to the Senate. The Tax Court said: "What that report may turn out to be, no one can now foretell, and even the most favorable recommendation which may be made by that court to the Senate will be of no force to establish an enforceable legal right. The Senate will then act upon its own judgment upon a broad standard of sovereign justice, and may uncontestably refute what the Court of Claims may recommend." 33 B.T.A. at 1045-1046. What if the Senate had acted favorably before the tax proceeding was commenced but after the decedent's death? What if the resolution had been passed *before* the decedent's death?

Taxation 1131 (1960); Note, Estate Taxation of Contract Rights Subject to Conditions Precedent, 67 Yale L.J. 467 (1958); Comment, Estate Taxation of Employee Death Benefits, 66 id. 1217 (1957).

BULL v. UNITED STATES

295 U.S. 247 (1935)

MR. JUSTICE ROBERTS delivered the opinion of the Court.

Archibald H. Bull died February 13, 1920. He had been a member of a partnership engaged in the business of ship-brokers. The agreement of association provided that in the event a partner died the survivors should continue the business for one year subsequent to his death, and his estate should "receive the same interests, or participate in the losses to the same extent," as the deceased partner would, if living, "based on the usual method of ascertaining what the said profits or losses would be. . . . Or the estate of the deceased partner shall have the option of withdrawing his interest from the firm within thirty days after the probate of will . . . and all adjustments of profits or losses shall be made as of the date of such withdrawal." The estate's representative did not exercise the option to withdraw in thirty days, and the business was conducted until December 31, 1920, as contemplated by the agreement.

The enterprise required no capital and none was ever invested by the partners.

Bull's share of profits from January 1, 1920, to the date of his death, February 13, 1920, was $24,124.20; he had no other accumulated profits and no interest in any tangible property belonging to the firm. Profits accruing to the estate for the period from the decedent's death to the end of 1920 were $212,718.79, $200,117.-09 being paid during the year, and $12,601.70 during the first two months of 1921. . . .

1. We concur in the view of the Court of Claims that the amount received from the partnership as profits earned prior to Bull's death [$24,124.20] was income earned by him in his lifetime and taxable to him as such; and that it was also corpus of his estate and as such to be included in his gross estate for computation of estate tax. We also agree that the sums paid his estate as profits earned after his death [$212,718.79] were not corpus but income received by his executor, and to be reckoned in computing income tax for the years 1920 and 1921. Where the effect of the contract is that the deceased partner's estate shall leave his interest in the business and the surviving partners shall acquire it by payments to the estate, the transaction is a sale, and payments made to the estate are for the account of the survivors. It results that the surviving partners are taxable upon firm profits and the estate is not. Here, however, the survivors have purchased nothing belonging to the decedent, who had made no investment in the business and owned no tangible property connected with it. The portion of the profits paid his estate was therefore income and not corpus; and this is so whether we consider the executor a member of the old firm for the remainder of the year, or hold that the estate became a partner in a new association formed upon the decedent's demise.

2. A serious and difficult issue is raised by the claim that the same receipt has been made the basis of both income and estate tax, although the item cannot in the circumstances be both income and corpus; and that the alternative prayer of the petition required the court to render a judgment which would redress the illegality and injustice resulting from the erroneous inclusion of the sum in the gross estate for estate tax. The respondent presents two arguments in opposition, one addressed to the merits and the other to the bar of the statute of limitations.

On the merits it is insisted that the government was entitled to both estate tax and income tax in virtue of the right conferred on the estate by the partnership agreement and the fruits of it. The position is that, as the contract gave Bull a valuable right which passed to his estate at his death, the Commissioner correctly included it for estate tax. And the propriety of treating the share of profits paid to the estate as income is said to be equally clear. The same sum of money in different aspects may be the basis of both forms of tax. An example is found in this estate. The decedent's share of profits accrued to the date of his death was $24,124.20. This was income to him in his lifetime and his executor was bound to return it as such. But the sum was paid to the executor by the surviving partners, and thus became an asset of the estate; accordingly, the petitioner returned that amount as part of the gross estate for computation of estate tax and the Commissioner properly treated it as such.

We are told that, since the right to profits is distinct from the profits actually collected, we cannot now say more than that perhaps the Commissioner put too high a value on the contract right when he valued it as equal to the amount of profits received — $212,718.99. . . .

While, as we have said, the same sum may in different aspects be used for the computation of both an income and an estate tax, this fact will not here serve to justify the Commissioner's rulings. They were inconsistent. The identical money — not a right to receive the amount, on the one hand, and actual receipt resulting from that right on the other — was the basis of two assessments. The

double taxation involved in this inconsistent treatment of that sum of money is made clear by the lower court's finding we have quoted.* The Commissioner assessed estate tax on the total obtained by adding $24,124.20, the decedent's share of profits earned prior to his death, and $212,718.79, the estate's share of profits earned thereafter. He treated the two items as of like quality, considered them both as capital or corpus; and viewed neither as the measure of value of a right passing from the decedent at death. No other conclusion may be drawn from the finding of the Court of Claims.

In the light of the facts it would not have been permissible to place a value of $212,718.99 or any other value on the mere right of continuance of the partnership relation inuring to Bull's estate. Had he lived, his share of profits would have been income. By the terms of the agreement his estate was to sustain precisely the same status quoad the firm as he had, in respect of profits and losses. Since the partners contributed no capital and owned no tangible property connected with the business, there is no justification for characterizing the right of a living partner to his share of earnings as part of his capital; and if the right was not capital to him, it could not be such to his estate. Let us suppose Bull had, while living, assigned his interest in the firm, with his partners' consent, to a third person for a valuable consideration, and in making return of income had valued or capitalized the right to profits which he had thus sold, had deducted such valuation from the consideration received, and returned the difference only as gain. We think the Commissioner would rightly have insisted that the entire amount received was income.

Since the firm was a personal service concern and no tangible property was involved in its transactions, if it had not been for the terms of the agreement, no accounting would have ever been made upon Bull's death for anything other than his share of profits accrued to the date of his death — $24,124.20 — and this would have been the only amount to be included in his estate in connection with his membership in the firm. As respects the status after death, the form of the stipulation is significant. The declaration is that the surviving partners "are to be at liberty" to continue the business for a year, in the same relation with the deceased partner's estate as if it were in fact the decedent himself still alive and a member of the firm. His personal representative is given a veto which will prevent the continuance of the firm's business. The purpose may well have been to protect the good will of the enterprise in the interest of the survivors and to afford them a reasonable time in which to arrange for their future activities. But no sale of the decedent's interest or share in the good will can be spelled out. Indeed the government strenuously asserted, in supporting the treatment of the payments to the estate as income, that the estate sold nothing to the surviving partners; and we agree. An analogous situation would be presented if Bull had not died, but the partnership had terminated by limitation on February 13, 1920, and the agreement had provided that, if Bull's partners so desired, the relation should continue for another year. It could not successfully be contended that, in such case, Bull's share of profit for the additional year was capital.

We think there was no estate tax due in respect of the $212,718.79 paid to the executor as profits for the period subsequent to the decedent's death.

[The Court's discussion of a second issue, application of the doctrine of recoupment (supra p. 872), is omitted.]

* In a previous proceeding, the Board of Tax Appeals had held that the sum of $200,117.09 received by the estate in 1920 was taxable as income for that year. 295 U.S. at 252-253. — Ed.

McCLENNEN v. COMMISSIONER

131 F.2d 165 (1st Cir. 1942)

Before MAGRUDER, MAHONEY and WOODBURY, Circuit Judges.

MAGRUDER, Circuit Judge.

Placing their chief reliance upon Bull v. United States, 1935, 295 U.S. 247, the petitioners, as executors under the will of George R. Nutter, deceased, seek a review by us of a decision by the Board of Tax Appeals sustaining in part the Commissioner's determination of a deficiency in the estate tax of Mr. Nutter. The Commissioner conceded error as to one item, in respect to which the Board made appropriate adjustment in redetermining the deficiency.

George R. Nutter had been a partner in the firm of Nutter, McClennen & Fish, practising law in Boston, Massachusetts. The firm kept its accounts on the cash receipts and disbursements basis. Its receipts were derived solely from personal services. Under the partnership agreement Mr. Nutter's share of the firm's net profits was 8 per cent. The agreement also contained the following provisions:

> On the retirement of a partner or on his death — the others continuing the business — the retiring partner or his estate in the case of his death shall, in addition to his percentage of net profits of the Firm received by it in cash up to the date of such death or retirement, also receive the same percentage of net profits of the Firm received by it in cash until the expiration of the eighteen (18) calendar months next after such retirement, or death, and this shall be in full of the retiring or deceasing member's interest in the capital, the assets, the receivables, the possibilities and the good will of the Firm. The continuing members shall have the right to the good will and the use of the Firm name except the deceasing or retiring member's name shall not be used without his written consent or that of his estate.
>
> The present book value of the Plant, Books, etc., and the Cash Capital of the Firm used to carry uncollected disbursements, etc., shall be furnished in accordance with the proportions of the partners' profit sharings for 1936. This will be accomplished by appropriate debits and credits on the books. These capital items are to be readjusted from time to time as profit sharing percentages change.

Mr. Nutter died on February 21, 1937. The balance sheet of the partnership, as of the date of Mr. Nutter's death, indicates the interests of the partners in the firm assets by reference to accounts described as follows: "Capital Account," $12,375, "Plant Account," $8,932.44, and "Undistributed Profits," $73,634.50. The share of the deceased in these three accounts was, respectively, $1,031.25,[1] $744.37,[1] and $6,136.21. The capital account represents the interest of the partners in a working cash balance, and the plant account represents the interest of the partners in such items as books, furniture, and other fixtures in the law office. The firm owned a lease upon its offices, ending February 28, 1939. It was found by the Board that the firm enjoyed good will, in which the decedent had an interest and to which he contributed.

At the date of Mr. Nutter's death the firm and the members thereof had rendered legal and related services for which payment had not been received. Some of such work had been completed and some had not been completed on February 21, 1937. No consideration was given to such completed and partially completed services, which had not been paid for, in computing Mr. Nutter's share, amounting to $6,136.21, of the undistributed profits of the firm at the date of death.

[1] These two amounts are slightly more than 8 per cent of the total capital account, and plant account, respectively. This is because under the partnership agreement E. Louise Malloch, an employee and not a partner of the firm, is entitled to receive a share in the total earnings of the firm but has no share in its "capital" or "plant" account.

After the death of George R. Nutter the other partners continued the business. Eight per cent of the net profits of the firm for the 18 calendar months next after the death, computed on the basis of cash receipts and disbursements, amounted to $34,069.99, which amount was paid over to the petitioners as executors. Of this amount $28,069.46 represented 8 per cent of the net profits for the period of the year next after the death, and the remainder represented 8 per cent of the net profits for the last six months of the agreed 18 months' period.

Petitioners filed an estate tax return with the Collector of Internal Revenue at Boston, and paid the tax thereon shown to be due. On the said return they duly elected to have the property includible in the gross estate valued as of one year after decedent's death, in accordance with the method authorized by [§2032, infra p. 1335]. The sum of $6,136.21, which had been received by the executors as representing the decedent's share of the undistributed profits as of the date of the death, was included in the estate tax return as part of the decedent's gross estate. But beyond this nothing was included on account of the value of the decedent's interest in the partnership.

In his notice of deficiency the Commissioner determined that $34,069.99 should have been included in the gross estate as the value of decedent's "interest in partnership Nutter, McClennen & Fish." The Board has upheld the Commissioner in this determination. We think the Board was right.

In the absence of a controlling agreement in the partnership articles the death of a partner dissolves the partnership. The survivors have the right and duty, with reasonable dispatch, to wind up the partnership affairs, to complete transactions begun but not then finished, to collect the accounts receivable, to pay the firm debts, to convert the remaining firm assets into cash, and to pay in cash to the partners and the legal representative of the deceased partner the net amounts shown by the accounts to be owing to each of them in respect of capital contributions and in respect of their shares of profits and surplus. The representative of a deceased partner does not succeed to any right to specific partnership property. In substance the deceased partner's interest, to which his representative succeeds, is a chose in action, a right to receive in cash the sum of money shown to be due him upon a liquidation and accounting. . . .

This chose in action to which the representative of the deceased partner succeeds, the right to receive payment of a sum of money shown to be due upon a liquidation and accounting, is of course a part of the deceased partner's wealth, and includible in the decedent's gross estate for purposes of computing the estate tax by virtue of the comprehensive definition in [§2033]. This is none the less true even though the net amount thus shown to be due to the estate is derived in whole or in part from past earnings or profits of the partnership resulting from personal services — profits which the decedent, if he had lived, would have had to report as income. The valuation of this chose in action might be a matter of difficulty, especially in the case of a partnership which cannot be speedily liquidated and whose accounts are complicated. Nevertheless, for estate tax purposes, the valuation must be made by the legal representatives of the deceased partner, on the basis of the best evidence available at the applicable valuation date.

In the case at bar, if there had not been the controlling provision in the partnership articles, above quoted, or if the survivors had not come to some agreement otherwise with the executors of Mr. Nutter, the survivors would have had to proceed to wind up the affairs of the partnership, to conclude all unfinished legal business on hand at the date of the death, to realize upon all of the assets of the firm, tangible or intangible, to pay the debts, to return to Mr. Nutter's estate his contribution of capital, if any, and to pay to his estate in cash the

amount shown to be due in respect of his "interest in the partnership," that is, his "share of the profits and surplus," as determined upon an accounting. Among other things to be taken into account, "the earned proportion of the unfinished business" would have had "to be valued to determine the decedent's interest in the partnership assets." Helvering v. Enright's Estate, 1941, 312 U.S. 636, 641; United States v. Carter, 5th Cir., 1927, 19 F.2d 121.

To obviate the necessity of a liquidation, or to eliminate accounting difficulties in determining the value of the deceased partner's interest, partners often make specific provision in the partnership articles.

Sometimes the partnership agreement merely provides for the postponement of liquidation, say, to the end of the term for which the partnership was created. Thus, a partnership agreement between A, B and C might provide that "should any partner die during the term of said co-partnership the firm shall not be dissolved thereupon, but the business shall be continued by the survivors until the expiration of said partnership term, the estate of the deceased partner to bear the same share in profits and losses as would have been received and borne by the deceased partner had he lived." Under such an agreement, if A dies, B and C do not buy out A's interest in the partnership. Unless more appears, A's executor does not become personally liable as a general partner, Butcher v. Hepworth, 1889, 115 N.Y. 328, 329. Nor is A's general estate in the executor's hands liable as a partner for new debts created by B and C in continuing the business. Stewart v. Robinson, 1889, 115 N.Y. 328. For the remainder of the term, A's share already embarked in the business remains in, subject to the risks of the business. It would seem not improper to describe the continuing business as now being owned by B and C as general partners, with A's estate (or A's executor as trustee under the will of A) as a limited partner therein, sharing in the profits, but not liable beyond the amount of interest already embarked in the business.

In the case just supposed, the chose in action, the right to which A's executor succeeds, would have to be included as part of the gross estate for estate tax purposes. It is a right to a fixed share of the profits of the business during the continuance of the term, plus a right to receive in cash the amount due to A's estate upon a final liquidation and accounting after the expiration of the term. This right in its entirety is an asset of A at the date of his death; and the value of this right as of the date of the death or the optional date one year later, with due discount for postponement of payment and other contingencies, would be included in computing the value of the gross estate. Bull v. United States, 1935, 295 U.S. 247, was a peculiar case on its facts and in the way the case came up; but we do not understand this case to hold that a right to receive future income payments is not "property" includible in the gross estate. A similar instance is the case of a decedent who dies possessed of a bond for $1,000 payable in ten years bearing interest at 6 per cent. The bond in its entirety may be valued at par at the date of the death, and this amount will be included in the gross estate. But this valuation embraces two elements, (1) the present value of the bondholder's right to receive a principal payment of $1,000 ten years hence, and (2) the present value of the bondholder's right to receive periodic interest payments until the bond is due. If the bondholder had lived he would have had to report the interest payments as income; nevertheless, upon his death his right to receive such future income payments would be in effect included in his gross estate. So if a creditor lends a sum of money to a partnership under a contract whereby the principal sum is to be repaid at the end of ten years, and meanwhile, in lieu of a fixed rate of interest, the creditor is to receive a share of the profits, the periodic receipt of such profits would be income to the creditor; but if the creditor should die there would have to be included in his gross estate not only the right

to receive future repayment of the principal but also the right to receive a share of the profits for the balance of the term of the loan. Likewise if a life insurance agent, after the termination of his agency, has a contract right to renewal commissions payable to him for services which had previously been rendered in writing policies of insurance, the subsequent receipt by him during his lifetime of such commissions would no doubt be income to him, see Helvering v. Eubank, 1940, 311 U.S. 122, but it can hardly be doubted that upon his death his right to receive such future income payments would have to be included as part of his gross estate.

We have spoken of a common type of arrangement whereby liquidation of the partnership is merely postponed, the deceased partner's estate sharing in the profits meanwhile. The payment to the estate of a share of the intervening profits could in no sense be described as the purchase price for the deceased partner's interest, for the value of that interest is ultimately to be paid over to the legal representative upon a final liquidation and accounting at the end of the partnership term.

In the case at bar the partnership agreement contains another familiar arrangement, whereby no liquidation and final accounting will ever be necessary in order to satisfy the claim of the deceased partner. In place of the chose in action to which Mr. Nutter's executor would have succeeded in the absence of specific provision in the partnership articles, that is, a right to receive payment in cash of the amount shown to be due the deceased partner upon a complete liquidation and accounting, a different right is substituted, a right of the estate to receive a share of the net profits of the firm for 18 calendar months after the partner's death.

The language of the partnership agreement in the present case is couched in terms of a purchase of the deceased partner's interest. What the estate is to receive "shall be in full of the retiring or deceasing member's interest in the capital, the assets, the receivables, the possibilities and the good will of the Firm." There is to be an extinguishment of the decedent's interest in the totality of the firm assets, tangible and intangible, as they stood at the moment of death, and the interests therein of the surviving partners are to be correspondingly augmented. Decision in the estate tax case now before us does not turn on the question whether the effect of the partnership agreement may be characterized with entire accuracy as a "purchase" and "sale" of the deceased partner's interest in the partnership.

If the agreement had provided that at the expiration of 18 months after the death the deceased partner's estate shall receive $30,000 "in full of the deceased member's interest" no one could doubt that the commuted value of the right to receive this future payment of $30,000 would have to be included in valuing the decedent's gross estate. The nature of the transaction is not essentially changed if the sum to be paid is expressed in terms of a variable amount calculated by reference to a percentage of the net profits of the continuing business for a stated period. See our decisions in Hill v. Commissioner, 1 Cir., 1930, 38 F.2d 165, and in Pope v. Commissioner, 1 Cir., 1930, 39 F.2d 420, which cases were cited with approval in Bull v. United States, 1935, 295 U.S. 247, 254. Whether the payment to the estate is expressed in terms of a percentage of the net profits of the continuing business as in Pope v. Commissioner, supra, or in terms of an amount equal to a percentage of the net profits for the stipulated period, as in Hill v. Commissioner, supra, is a matter of form, not of substance. In either case the purpose of the agreement is to enable the survivors to satisfy the claim of the deceased partner and to continue the business without liquidation. Under this type of arrangement there is a clear implication in Bull v. United States, 1935,

295 U.S. 247, at page 254, that the substituted right to which the executor of the deceased partner succeeds must be included as a part of his gross estate.

In the present case the Commissioner valued Mr. Nutter's interest in the partnership at the sum of $34,069.99, which happened to be the exact amount received by the executors from the survivors as representing 8 per cent of the net profits of the partnership for the 18 calendar months after the death. There is no contention that this was an overvaluation. As bearing on the value of the right to receive 8 per cent of the net profits for such period, the Commissioner put in evidence past partnership earnings as follows:

1930	$311,215.09	1933	$343,810.80
1931	345,549.12	1934	366,881.59
1932	235,016.21	1935	405,492.26

The Board pointed out that at the optional valuation date, one year after death, the 8 per cent amounted to $28,069.46 and the contract still had six months to run. The Board said: "Certainly at the end of one year the contract was worth, at least, the amount it had already produced." Judging from this, and from the past history of the partnership's earnings, the indication then was that the contract right was worth considerably more than $34,069.99. The Board therefore concluded that the Commissioner "did not err in adding to gross estate $34,069.99." We agree.

In this case we do not have to consider any questions involving the income taxes payable by Mr. Nutter's estate or by his residuary legatee or by the surviving partners in respect of the profits made by the firm during the 18 months' period after Mr. Nutter's death. We intimate no opinion as to the many perplexing income tax problems lurking in the background. . . .

The decision of the Board of Tax Appeals is affirmed.

NOTE

1. *Relation to §691.* Section 691 (supra p. 1075) was enacted to deal with what Judge Magruder describes as "the many perplexing income tax problems lurking in the background." The predecessor of §691 (§126 of the 1939 Code) was enacted in 1942, after the taxable years involved in the *Bull* and *McClennen* cases. Would *Bull* have been decided as it was if the statute had then provided, as §691(c) now does, that the estate or legatee might deduct, on the income tax return, an appropriate portion of the estate tax when reporting "income in respect of a decedent"? Can the *Bull* case be reconciled with the *McClennen* case?

See Riegelman's Estate v. Commissioner, 253 F.2d 315 (2d Cir. 1958), which reviews this area and expresses the opinion that the *Bull* case "no longer states the applicable law."

2. *Income tax treatment of partnership liquidation.* The income tax treatment of partnership arrangements like that involved in the *McClennen* case was revised in 1954. As seen supra page 770, payments made in liquidation of the interest of a deceased partner are taxed as income to the estate or other successor, except to the extent that they are "made in exchange for the interest of such partner in partnership property." (The latter phrase may not include amounts paid for goodwill, unless provided for by the partnership agreement, or amounts paid for "unrealized receivables.") How would these rules be applied to the *McClennen* agreement? The value of the right to be paid for the decedent's interest in "partnership property" is clearly part of the estate under §2033. The rest of what the estate gets from the partnership seems, by reason of §753, to be "income in respect of a decedent." The Senate Report says (pp. 405-406) of §753:

> The House provision has been amended to make clear that all payments to the successor of a deceased partner coming within the provisions of section 736(a) are to be considered "income in respect of a decedent." Section 753 thus covers pay-

ments in the nature of mutual insurance as well as payments attributable to the decedent's interest in the unrealized receivables of the partnership. Thus, while a successor in interest of a decedent partner will be required to include in gross income amounts received from the partnership which are attributable to the value of the decedent's interest in unrealized fees or mutual insurance, the recipient will at the same time receive a deduction for the estate tax paid with respect to the inclusion of such rights to income in the decedent's estate.

Does this mean that the *Bull* case has been laid to rest by the 1954 Code?

3. *Estate as continuing partner.* Suppose the partnership agreement provides that the estate may continue *as a partner* for a period of time after death, receiving a share of the profits but also sharing in losses to the extent of the capital invested in the firm. Would the right to share in profits be included in the gross estate under §2033? Or is this simply a case of post-death earnings of the estate, to be treated like any other yield arising from a favorable investment of the estate's assets by the executor? Is this what occurred in the *Bull* case?

4. *Time for valuing interest.* The estate tax return is due 15 months after death. §6075(a). How can the value of the partnership interest be ascertained by then if the estate is entitled to share in the profits of a partnership for a number of years thereafter?

5. *Effect of restrictive agreements.* The courts in both *Bull* and *McClennen* accepted the arrangement for paying off the estate of the deceased partner as a bona fide business agreement. What if a partnership consists of a father and his two sons, and they agree that on the death of any one of them, his estate will receive $1 — or some other amount bearing no relationship to fair market value — for his partnership interest? For some of the problems that arise when courts probe beneath the surface of an agreement for buying out the interest of a deceased partner or shareholder, see page 1349 infra.

HELVERING v. SAFE DEPOSIT & TRUST CO.
316 U.S. 56 (1942)

MR. JUSTICE BLACK delivered the opinion of the Court.

Because of the importance in the administration of the Federal Estate Tax of the questions involved, we granted certiorari to review the judgment of the Circuit Court of Appeals, 121 F.2d 307, affirming a decision of the Board of Tax Appeals, 42 B.T.A. 145.

Zachary Smith Reynolds, age 20, died on July 6, 1932. At the time, he was beneficiary of three trusts: one created by his father's will in 1918, one by deed executed by his mother in 1923, and one created by his mother's will in 1924. From his father's trust, the decedent was to receive only a portion of the income prior to his twenty-eighth birthday, at which time, if living, he was to become the outright owner of the trust property and all accumulated income. His mother's trust directed that he enjoy the income for life, subject to certain restrictions before he reached the age of 28. Each of the trusts gave the decedent a general testamentary power of appointment over the trust property; in default of exercise of the power the properties were to go to his descendants, or if he had none, to his brother and sisters and their issue per stirpes.

The Commissioner included all the trust property within the decedent's gross estate for the purpose of computing the Federal Estate Tax. The Board of Tax Appeals and the Circuit Court of Appeals, however, held that no part of the trust property should have been included.

I

The case presents two questions, the first of which is whether the decedent at the time of his death had by virtue of his general powers of appointment, even if never exercised, such an interest in the trust property as to require its inclusion in his gross estate under [§2033].

The Government argues that at the time of his death the decedent had an "interest" in the trust properties that should have been included in his gross estate [under §2033], because he, to the exclusion of all other persons, could enjoy the income from them; would have received the corpus of one trust upon reaching the age of 28; and could alone decide to whom the benefits of all the trusts would pass at his death. These rights, it is said, were attributes of ownership substantially equivalent to a fee simple title, subject only to specified restrictions on alienation and the use of income. The respondents deny that the rights of the decedent with respect to any of the three trusts were substantially equivalent to ownership in fee, emphasizing the practical importance of the restrictions on alienation and the use of income, and arguing further that the decedent never actually had the capacity to make an effective testamentary disposition of the property because he died before reaching his majority.

We find it unnecessary to decide between these conflicting contentions on the economic equivalence of the decedent's rights and complete ownership.[1] For even if we assume with the Government that the restrictions upon the decedent's use and enjoyment of the trust properties may be dismissed as negligible and that he had the capacity to exercise a testamentary power of appointment, the question still remains: Did the decedent have "at the time of his death" such an "interest" as Congress intended to be included in a decedent's gross estate under [§2033]? It is not contended that the benefits during life which the trusts provided for the decedent, terminating as they did at his death, made the trust properties part of his gross estate under the statute. And viewing [§2033] in its background of legislative, judicial, and administrative history, we cannot reach the conclusion that the words "interest . . . of the decedent at the time of his death" were intended by Congress to include property subject to a general testamentary power of appointment unexercised by the decedent.

The forerunner of [§2033] was §202(a) of the Revenue Act of 1916, 39 Stat. 777. In United States v. Field, 255 U.S. 257, this Court held that property passing under a general power of appointment *exercised* by a decedent was not such an "interest" of the decedent as the 1916 Act brought within the decedent's gross estate. While the holding was limited to *exercised* powers of appointment, the approach of the Court, the authorities cited, and certain explicit statements in the opinion left little doubt that the Court regarded property subject to *unexercised* general powers of appointment as similarly beyond the scope of the statutory phrase "interest of the decedent."

After the *Field* case, the provision it passed upon was reenacted without change in the Revenue Act of 1921 and in the Revenue Act of 1924. If the implications of the *Field* opinion with respect to unexercised powers had been considered contrary to the intendment of the words "interest of the decedent," it is reason-

[1] In declining to pass upon this issue, we do not reject the principle we have often recognized that the realities of the taxpayer's economic interest, rather than the niceties of the conveyancer's art, should determine the power to tax. See Curry v. McCanless, 307 U.S. 357, 371, and cases there cited. Nor do we deny the relevance of this principle as a guide to statutory interpretation where, unlike here, the language of a statute and its statutory history do not afford more specific indications of legislative intent. Helvering v. Clifford, 309 U.S. 331.

able to suppose that Congress would have added some clarifying amendment. . . .

When it was held in the *Field* case that property subject to an *exercised* general testamentary power of appointment was not to be included in the decedent's gross estate under the Revenue Act of 1916, this Court referred to an amendment passed in 1919 which specifically declared property passing under an exercised general testamentary power to be part of the decedent's gross estate. The passage of this amendment, said the Court, "indicates that Congress at least was doubtful whether the previous act included property passing by appointment." 225 U.S. at 265. In the face of such doubts, which cannot reasonably be supposed to have been less than doubts with respect to *unexercised* powers, Congress nevertheless specified only that property subject to exercised powers should be included. From this deliberate singling out of *exercised* powers alone, without the corroboration of the other matters we have discussed, a Congressional intent to treat *unexercised* powers otherwise can be deduced. At the least, §302(f) of the 1926 Act,[2] the counterpart of the 1919 amendment referred to in the *Field* case, represents a course of action followed by Congress, since 1919, entirely consistent with a purpose to exclude from decedents' gross estates property subject to unexercised general testamentary powers of appointment.

In no judicial opinion brought to our attention has it been held that the gross estate of a decedent includes, for purposes of the Federal Estate Tax, property subject to an unexercised general power. On the contrary, as the court below points out, "the courts have been at pains to consider whether property passed under a general power or not so as to be taxable under Section 302(f), a consideration which would have been absolutely unnecessary if the estate were taxable under [§2033] because of the mere existence of a general power whether exercised or not." 121 F.2d 307, 312. In addition, the uniform administrative practice until this case arose appears to have placed an interpretation upon the Federal Estate Tax contrary to that the Government now urges. No regulations issued under the several revenue acts, including those in effect at the time this suit was initiated, prescribe that property subject to an unexercised general testamentary power of appointment should be included in a decedent's gross estate. Because of the combined effect of all of these circumstances, we believe that a departure from the long-standing, generally accepted[3] construction of [§2033], now contested for the first time by the Government, would override the best indications we have of Congressional intent.

II

[Omitted.]
Reversed.

NOTE

1. *Substantial ownership and §2033.* The powers of appointment provision, which is now §2041, was thoroughly revised in 1942 and again in 1951. The changes are examined in some detail infra page 1261, but it is worth noting here that if the decedent at the time

---

2 "The value of the gross estate of the decedent shall be determined by including the value at the time of his death of all property, real or personal, tangible or intangible, wherever situated —

"(f) To the extent of any property passing under a general power of appointment exercised by the decedent (1) by will, or (2) by deed executed in contemplation of, or intended to take effect in possession or enjoyment at or after, his death, except in case of a bona fide sale for an adequate and full consideration in money or money's worth, — " 44 Stat. 9, 70-71.

3 See 1 Paul, Federal Estate and Gift Taxation, p. 425: "As long as there is no actual or constructive exercise of the power, there can be no tax under the present statute."

of his death possesses a general power of appointment created after 1942, the property subject to the power is now includible in his estate even if he does not exercise it.

The great significance of the *Safe Deposit & Trust Co.* case is that the Court refused to read what is now §2033 in the expansive way it came to read §22(a) of the 1939 Code [§61(a), 1954 Code]. The *Clifford* case, supra page 372, should be studied again, especially for its explanation of the relation between the catch-all language of §22(a) and the specific language of §§166 and 167 of the 1939 Code [§§676 and 677, 1954 Code]. Was the legislative history adduced by the taxpayer in the *Safe Deposit & Trust Co.* case more compelling than that relied upon by the taxpayer in the *Clifford* case, as footnote 1, supra page 1099, suggests?

Does the *Safe Deposit & Trust Co.* case mean that a *Clifford* trust cannot be included in the grantor's gross estate even though, to quote the *Clifford* opinion, he could not reasonably have "felt himself the poorer after this trust had been executed"? As will be seen, a trust will be part of the grantor's estate if — roughly speaking — he retained the power to alter, amend, or revoke it; if he created it in contemplation of death and died within three years; if he retained a life interest in the income; or if certain other statutory conditions are met. So far, §2033 has not been employed as a method of reaching transfers that escape the technical requirements of these other provisions on the ground that the grantor was still the owner "in substance" of the property. The *Safe Deposit & Trust Co.* case may have dampened the Treasury's enthusiasm, or at least its hopes, for such a use of §2033.* But it is one thing to hold that by requiring property to be included if the decedent *exercised* a general power of appointment, Congress must have intended not to tax it if the power was *unexercised*. It is another thing to assert that the existence of the other specific grounds for taxing transfers (contemplation of death; retained life estates; powers to amend, alter, or revoke; etc.) necessarily means that no other property, except that owned outright by the decedent, may be included in the gross estate.

2. *Other cases.* In Second National Bank of Danville v. Dallman, 209 F.2d 321 (7th Cir. 1954), the decedent was the beneficiary of a policy of insurance on her father's life, under which she was receiving an annuity of 3 per cent of the face amount ($30,000) under a settlement option elected by her father. She was also entitled to designate a "contingent beneficiary" to receive the proceeds of the policy. She did not exercise this power, with the result that the proceeds were paid by the insurance company to her estate under the following provision of the settlement option:

> At the death of the last surviving Beneficiary if there be no Contingent Beneficiary then living, or at the death of the last surviving Contingent Beneficiary occurring subsequently thereto, the amount retained by the Company under Option "A" will be paid to the executors, administrators or assigns of such last surviving Beneficiary or Contingent Beneficiary upon due surrender of this Policy.

The decedent did not mention the insurance proceeds in her will, but her executor paid them over to a trustee under a residuary clause establishing a testamentary trust of "the

* On one occasion, the Supreme Court asked counsel in a pending case to argue the relation of the *Clifford* case to estate tax liability. Estate of Spiegel v. Commissioner, 68 S. Ct. 1522 (1948). The government took the following position in its brief on reargument (p. 53):

". . . Indeed, it is even arguable that a trust covered by the *Clifford* doctrine should be included in the gross estate under [§2033], which in a sense corresponds to the general provisions in [§61(a)] defining gross income. Section [2033] is the basic provision requiring the inclusion in the gross estate of all property owned by the decedent at his death. And where the settlor remains in substance the owner of the trust property for purposes of Section [61(a)] under the *Clifford* case, it is highly persuasive that it should be included in his gross estate under Section [2033], unless there is a specific statute providing otherwise. See Helvering v. Safe Deposit Co., 316 U.S. 56, 58-59. However, the Government has sought in the present cases merely to include these trusts in Section 811(c) [1939 Code]."

The case was decided, as the government intimated it should be, under §811(c) of the 1939 Code, rather than under the general language of §2033. The *Clifford* problem, opened up on the Court's own motion, was discussed only in one of the dissenting opinions; Mr. Justice Burton denied that the doctrine of that case was applicable to estate tax field taxation, but he did not cite the *Safe Deposit & Trust Co.* case. 335 U.S. at 712-718.

rest, residue, and remainder of my estate." The court held that the proceeds were not includible in her gross estate under §2033:

> The government advances theories relative to decedent's control and dominion over the insurance proceeds, which possess more novelty than merit. For instance, the government in its brief states: "From the time of her father's death in 1925, the decedent possessed not only a life estate in the fund but also the remainder interest therein of which she could not be divested except by her voluntary act." Assuming she had a life estate in the fund, which we doubt, such interest was extinguished at her death. In our view, there is no basis for the claim that she possessed a "remainder interest." After the fund had been retained and employed by the insurance company for decedent's benefit during her lifetime, it vested irrevocably and was payable either to the "executors, administrators or assigns" of the decedent or to a contingent beneficiary, depending upon whether decedent during her lifetime exercised her right to select such contingent beneficiary and made such election effective in the manner provided for by the contract. The government in its brief continues: "She could sell, pledge, or assign, in whole or in part, either her life interest or her remainder interest in the fund, or both, to anyone of her own unrestricted choice, including her creditors." If this all-inclusive description of decedent's control or right over the fund means only that she could nominate a contingent beneficiary, we agree. If it means that she had any right or control over the fund other than that, we disagree. The brief continues: "She could and did dispose of her remainder interest by will." It may be true she attempted to do so but her act in that respect was, in our judgment, futile because, for the reasons heretofore shown, it was unauthorized, she was without power to divert the fund by testamentary devise. The novelty of the argument increases as we go along. The brief further states: "In fact, the decedent possessed from the date of death of her father all of the incidents of complete ownership of the fund save only that she could not withdraw the money from the insurance company during her lifetime." It would be more logical to state that decedent during her lifetime possessed none of the incidents of ownership; in fact, she possessed no rights relative to the fund other than those which we have previously stated. . . .
>
> While, as previously noted, no mention was made of the insurance proceeds in decedent's will, it is true under the stipulated facts that such proceeds, together with other property, were turned over by her executor to the trustee designated in her will. Whether the executor had a right to do so is a question not before us and we think it is of no significance. If the decedent had the power by will to direct that the insurance proceeds be paid to a trustee, it would seem logical to conclude that she could have directed payment to Bill Jones, or anybody else. Can there be any rational supposition that the insurance company could have been required to recognize such a direction on the part of the decedent? And the fact is, of course, that the proceeds were paid to the executor not by reason of decedent's will but because of the contractual obligation with her father. Any abortive attempt by decedent to make a disposition of the insurance proceeds effective after her death is not determinative of the issue for decision. The controlling factor is, as we have heretofore attempted to show and which we think is irrefutable, that the decedent was without such power. In Estate of Rogers v. Commissioner, 320 U.S. 410, 413, the court stated, "And that is precisely what the federal estate tax hits — an exercise of the privilege of directing the course of property after a man's death." Here, any attempt by decedent to exercise the privilege (power) to direct the course of the insurance proceeds after her death was of no effect; she was not possessed of power to do so. [209 F.2d at 325-326.]

See also Royce's Estate v. Commissioner, 46 B.T.A. 1090 (1942), in which the government tried to apply the estate tax to property which the decedent had the right to withdraw on demand from a trust created by her husband. Apparently the government thought that the *Safe Deposit & Trust Co.* case was distinguishable because it involved a testamentary power of appointment, while the *Royce* case involved a power exercisable during life. The court held that the decedent had no "interest" in the trust corpus.

EISENSTEIN, ARE WE READY FOR ESTATE AND GIFT TAX REVISION? *

23 Taxes 316, 323-324 (1945)

There seems to be an impression that an estate tax is congenitally unable to fasten upon property which passes from one trust beneficiary to another, since the decedent has never been full-fledged owner of the property. But this is to assume on the basis of our own limited experience that the deficiencies of the *federal* estate tax must necessarily harass *every* estate tax. In short, substantial change is excluded by freezing the shortcomings of the very status quo which is questioned. However, even if the ingredients of a sturdy estate tax base are to be found in existing tax measures, little is gained by referring to our present estate tax law. For the older British estate tax, which started its career in 1894, has always had special provisions handling property settled in trust. However, as I see it, we should think things and not words. The important thing is not to search for certain so-called intrinsic characteristics or limitations of an estate tax, but to determine, as a matter of policy, the requirements of an effective and equitable estate tax, regardless of the particular scheme of disposition. An estate tax is what we make it. One need not bow to any inner compulsion of semantics.

The vital fact is that under the present federal estate tax, property which passes by outright disposition bears a far heavier tax load than property which moves along paths charted in advance by a trust. How can this condition be met? I am going to mention four possible approaches. Although these four hardly exhaust the alternatives which compete for recognition, they seem to provide a sturdy framework of reference even if individual tastes may differ quite violently.

The first possibility is to impose an additional tax upon the initial disposition in trust to compensate for the interim loss of revenue as a result of the settlement in trust. In considering this approach, it is well to remember that we are not entirely in the realm of theory. As I have already suggested, the English, unlike ourselves, were acutely conscious of the avoidance potentialities of the trust device and imposed in their original act of 1894 an additional tax — called a Settlement Duty — upon dispositions in trust. The purpose of this duty was to equalize, in rather rough fashion, the total burden, over several generations, borne by property in trust and property passing outright. This additional duty, however, was abandoned in 1914 because it failed to attain its objective. From our own point of view, I think there are three difficulties which should be noted. In the first place, the compensatory levy might have to be so high in order to attain an equivalence in burden that it would be politically unfeasible. Second, the additional tax would fail to differentiate between different trusts on the basis of successive shifts in beneficial enjoyment. Finally, a levy upon the disposition in trust would enable all successions under outstanding trusts to escape tax. I have never been able to understand why the early bird should necessarily catch the worm when the tax laws are strengthened and improved. An initial error is hardly a remorseless excuse for creating a vested interest in the error under cover of the Constitution.

The present English law offers us a second possibility, namely, to tax the property when the beneficial enjoyment shifts from one person to another. Hence, upon the death of the life tenant, the property would be included in his gross estate. Undoubtedly this treatment of trusts is at variance with established no-

* Reprinted by permission.

tions for, after all, the life tenant, who has never owned the property, is accorded the status of owner at death. I will by-pass the constitutional question, although I would like to mention the Supreme Court's recent admonition that it is sufficient for estate tax purposes "that one person acquires economic interests in property through the death of another person; even though such acquisition is in part the automatic consequence of death." Whitney v. State Tax Commission, 309 U.S. 530, 538 (1940). The important question at present is one of policy — to determine the appropriate tax treatment. While the constitutional issues are obviously serious, we may worry about constitutional doctrine once we have decided what to do. It may nevertheless appear unjust to tax the life tenant as if he were owner. Tax law, however, is no exception to the rule that "the right answer usually depends on putting the right question." Estate of Rogers v. Commissioner, 320 U.S. 410, 413 (1943). If the crucial question is how to devise a levy which is geared to the decedent's quantum of ownership, then the English system is undoubtedly on the wrong track. If, on the other hand, the question is one of implementing the estate tax so that, regardless of the particular type of disposition, it takes the same periodic bite out of property as it moves from one generation to another, the British estate tax is clearly on the right track.

A third alternative is more modest than the English statute. Our problem would be approached from the taker's side of the transfer by imposing a supplementary accessions tax upon the remainder when it falls in. The major practical distinction between this type of tax and the English method is that the former would not aggregate the remainder together with the life tenant's individual property. The tax base would be composed entirely of the remainder out of which the tax would be paid. Dispositions in trust would still enjoy tax benefits although they could be somewhat curtailed, depending upon the rate. A supplementary accessions tax, which is essentially a modified inheritance tax, naturally raises the question of handling accessions which are not absolute in character. For example, to take a simple case, suppose the initial life estate is followed by another before the remainder materializes in possession and enjoyment. The tax upon the second life estate could be determined in a variety of ways. It might be imposed upon commencement of the tenancy and be based upon the actuarial value of the interest as under an inheritance tax; it might be collected on a pay-as-you-go basis as the income was received, with a rate progression akin to that of the gift tax; or it might be computed at the termination of the tenancy, when the period of enjoyment was already a matter of history rather than prediction. The difficulties of valuation would of course increase as the contingencies became more complicated, and the complexities could easily pass beyond the recognized limitations of the art of valuation.

The valuation problems posed by a supplementary accessions tax lead very easily and naturally to the fourth possibility. Instead of imposing an accessions tax, Congress might enact a supplementary estate tax which would apply to property passing in accordance with a settlement in trust made by another. As an estate tax, the levy would avoid the valuation complexities just noted, since the tax would be laid upon the transfer of beneficial enjoyment and not upon the taker's receipt. The tax would be distinguishable from the British death duty in that the trust property would not be aggregated with the decedent's individual assets. A supplementary estate tax of this type would fit very snugly into our present system and its established concepts. It would not, however, attain the equivalence of the British system.

NOTE

1. *The life estate in estate planning.* The principal practical difficulties in employing the dispositive pattern of a life estate in children, remainder to grandchildren, as a device to avoid a generation of estate taxation are two:

(1) The family fortune may not be large enough to take care of the children if they are given only a life estate. For this reason, the life-estate-remainder sequence is most useful in precisely those circumstances where it most reduces the tax burden — for a very large family fortune.

(2) Ordinarily the children, rather than the grandchildren, are the primary object of the testator's solicitude. Consequently, even if the fortune is large, he may be fearful of a shrinkage that will squeeze the life tenants. The remedy is to give them the right to invade corpus. But if the right is unfettered, it will be a "general power of appointment" under §2041, and (if created after 1942) it will bring the property into the life tenant's estate even if he dies without exercising it. As is seen infra page 1267, however, under today's law the life tenant can be endowed with certain restricted powers to invade corpus (in the event of extraordinary medical expenses; up to $5000 per year; etc.) without bringing the corpus into his gross estate. Another possibility, which may adequately protect the life tenant even though it gives him less independence, is to vest the power to advance corpus in a third person.

SECTION C. DOWER AND CURTESY, COMMUNITY PROPERTY, AND THE MARITAL DEDUCTION

1. *Dower, Curtesy, and Statutory Substitutes Therefor*

Section 2034, providing that the gross estate shall include all property to the extent of the surviving spouse's interest as dower, curtesy, or statutory substitute therefor, buttresses §2033 (property owned at death) by preventing the gross estate from being reduced by the value of the surviving spouse's dower or similar marital rights. For the treatment of dower and curtesy before the enactment of §2034 in 1918, see Randolph v. Craig, 267 Fed. 993 (M.D. Tenn. 1920); Schuette v. Bowers, 40 F.2d 208 (2d Cir. 1930).

It has been argued that the inclusion of dower in the gross estate is unconstitutional. The argument: (a) The wife's dower interest arises as an incident of her marriage, not from her husband's death; (b) therefore, there is no "transfer" at the time of her husband's death; (c) therefore, the tax is imposed not upon a transfer but upon the surviving wife's "property"; (d) therefore, the tax is not an excise but a "direct" tax; (e) therefore, the tax violates Sections 2 and 9 of Article I of the Constitution, which require that direct taxes be apportioned among the several states according to their population. The weak links in the syllogism are of course points (a) and (b); in upholding the tax, the Court of Appeals for the Eighth Circuit said, in Allen v. Henggeler, 32 F.2d 69, 72 (1929), cert. denied, 280 U.S. 594:

> . . . Giving full weight to the Nebraska court's description of the wife's interest, the facts still remain that the husband has at least the following very substantial rights in such property:
>
> He has the exclusive right of possession; the exclusive right to the income incident thereto; all of it can be taken for his debts; he has therefore the exclusive right to use

it as a basis for credit; he has the right to have it all applied to the payment of his debts upon his death; as to the personal property, he has the further and exclusive right of transfer and disposition and of gift, and can likewise convey real estate if his wife is not a resident of Nebraska; he has the power to convey real estate, without his resident wife's signature, and put his purchaser into possession, and, if his wife predeceases him, the title is absolute. He has every right of ownership, save that he cannot will it without her consent; and, as to real estate with a resident wife, his deed is conditioned on him outliving her; and, perhaps, he cannot give away or dissipate property in fraud of her.

These rights of the husband are among the most valuable incidents of ownership. The right of possession and enjoyment of the income, the right to use it as a basis for credit, and the right to pay his debts with it, are most important attributes of ownership. And these are all "interests" which he enjoys in his own property, under the statutes and decisions of Nebraska and which cease at his death.

As a matter of fact, the Nebraska statutes and decisions are very much like those of many other states, and it is matter of common knowledge that a widow has much greater rights in her one-third or one-half, as the case may be, after death than she does before. Upon the death of her husband, she "comes into" her property. The very substantial rights which her husband has in the one-third cease at his death.

Accord: Nyberg v. United States, 66 Ct. Cl. 153 (1928), cert. denied, 278 U.S. 646; Mayer v. Reinecke, 130 F.2d 350 (7th Cir. 1942), cert. denied, 317 U.S. 684. Although the Supreme Court has never directly passed on the constitutionality of §2034, its validity is assumed in Merrill v. Fahs, supra page 1027, and follows a fortiori from the reasoning of Fernandez v. Wiener, infra page 1107.

H, pursuant to an antenuptial agreement, created an irrevocable trust in favor of W for her life and in his will gave her the equivalent of her dower rights less the value of the trust. The Commissioner included the value of the trust in the gross estate, arguing that §2034 "should be construed to include not only interests in lieu of dower created by statute, as that section directs, but also any interest in lieu of dower created by the decedent." The court refused to adopt this construction, as it would "extend the application of [§2034] far beyond its terms" and beyond the construction of the section in the Regulations (Regs. §20.2034-1). Estate of Byram v. Commissioner, 9 T.C. 1 (1947).

Property transferred "in contemplation of death" (a phrase examined in detail infra p. 1121) is part of the gross estate, "except in case of a bona fide sale for an adequate and full consideration in money and money's worth." §2035. If H gives W $100,000 in contemplation of death, the sum will be part of his gross estate, though the money is W's absolutely — indeed, even though it has been spent — long before H's death. If a transfer is made for full and adequate consideration (e.g., as payment for property), however, the transferred property is not brought back into H's gross estate. What if the transfer, though in contemplation of death, was in return for W's release of her dower? Since the Revenue Act of 1932, the statute has expressly provided that a relinquishment of dower, curtesy, or similar rights shall not be considered as consideration in money or money's worth. See §2043(b), the history of which was set out in Merrill v. Fahs, supra page 1027, see also Empire Trust Co. v. Commissioner, 94 F.2d 307 (4th Cir. 1938); Ferguson v. Dickson, 300 Fed. 961 (3d Cir. 1924), cert. denied, 266 U.S. 628; McCaughn v. Carver, 19 F.2d 126 (3d Cir. 1927).

2. *Community Property*

Although the federal estate tax disregards the surviving spouse's dower, curtesy, or similar interests in computing the decedent's gross estate, the treatment of the surviving spouse's interest in community property has been very different. As early as 1919, the Attorney General ruled that only one half of the value of

community property was includible in the gross estate of the first spouse to die. T.D. 3138, 23 Treas. Dec. Int. Rev. 238 (1921); T.D. 2450, 19 id. 38 (1919). The ruling was predicated on the nature of community property: each spouse is regarded as having a vested interest in one half throughout the marriage, and the first spouse to die has testamentary power over his or her one half only. See Poe v. Seaborn, supra page 330; de Funiak, Principles of Community Property (1943), §§1, 102, 113; de Funiak, A Review in Brief of Principles of Community Property, 32 Ky. L.J. 63 (1943). Other observers, however, have thought that the husband's control over both halves of the community property during the marriage was so substantial that it would be appropriate to include the entire property in his gross estate if he was the first to die. See Eisenstein, Estate Taxes and the Higher Learning of the Supreme Court, 3 Tax L. Rev. 395, 538-540 (1948).

In 1942, Congress concluded that the legal and economic differences between the common law and community property systems did not justify the substantial difference in their federal tax burdens, and moved to equalize their estate tax consequences* by requiring the entire amount of the community property to be included in the gross estate of the first spouse to die "except such part thereof as may be shown to have been received as compensation for personal services actually rendered by the surviving spouse or derived originally from such compensation or from separate property of the surviving spouse." Even if the community property was entirely attributable to the surviving spouse's personal services or separate property, however, the 1942 amendment required one half to be included in the gross estate of the spouse who died first because of his or her testamentary power over that half.

The constitutionality of the 1942 amendment was attacked, and upheld, in Fernandez v. Wiener, 326 U.S. 340 (1945). In a lengthy opinion, the Supreme Court (per Chief Justice Stone) said:

> Appellees' argument is in substance that the nature of community property is such that husband and wife each has, by virtue of the establishment of their marital community, and from its beginning, a present half interest in such property; that the death of either effects no transfer or relinquishment of any interest in the property other than that of the half share which the decedent had before his death; and that the survivor in consequence of the death of the other spouse acquires no new or different interest in the property, but only retains the half share he or she had prior to the death of the other spouse. From this appellees conclude that the death of either spouse is not an event which in any case can bring more than one-half of the community property within the reach of the power to "lay and collect . . . imposts and excises" conferred on Congress by Article I, §8 of the Constitution, and that the present amendment taxing the entire value of the community property on the death of either spouse is a denial of due process because the death of neither operates to transfer, relinquish or enlarge any legal or economic interest in the property of the other spouse. Hence it is said that the statute infringes due process by adding to the concededly valid tax on the decedent's half share a further tax measured by the one-half interest of the surviving spouse. Further, it is urged in support of the due process contention, that the statute arbitrarily and capriciously invents different rules of taxation whose alternative application is governed by a single consideration, namely, which will yield the greater tax; and that the statute creates a presumption contrary to state law, and having no rational basis in fact, that the entire community is owned or economically attributable to the spouse first to die. It is also argued that even if Congress could validly impose the tax where, as here, the husband is first to die, there is no basis for the tax where the wife dies first, and that since the statute purports to apply in either case, and is not separable, it cannot be validly applied in this.
>
> It is also contended that the tax is not uniform as required by Article I, §8, Clause 1

* As indicated infra page 1110, no change in the income tax advantages of the community property system was made in 1942, and, despite the loss of its estate tax appeal, it began to move eastward.

of the Constitution, because the joint interests of husband and wife in community property states are taxed according to a different and more onerous standard than is applied to comparable joint interests, and specifically to tenancies in common and limited partnerships, created under the laws of other states in which the presumption is not applied; and because the statute disregards for purposes of taxation the property laws of the community property states, while recognizing the property laws of other states for those purposes.

It is said too that the levy is a direct tax, invalid because not apportioned (Article I, §9, Clause 4 of the Constitution), insofar as it contemplates collection of part of the tax out of the wife's half of the community property, since, it is said, there is no excisable event touching her property on her husband's death and the tax collected out of her property is in effect a direct tax upon it. And finally the tax is said to invade the powers reserved to the states by the Tenth Amendment, to determine property relationships within their borders.

The merits of these contentions cannot be accurately appraised without some inquiry as to the nature of respective spouses' community property interests as defined by Louisiana law. . . . As we have seen, the death of the husband of the Louisiana marital community not only operates to transfer his rights in his share of the community to his heirs or those taking under his will. It terminates his expansive and sometimes profitable control over the wife's share, and for the first time brings her half of the property into her full and exclusive possession, control and enjoyment. The cessation of these extensive powers of the husband, even though they were powers over property which he never "owned," and the establishment in the wife of new powers of control over her share, though it was always hers, furnish appropriate occasions for the imposition of an excise tax.

Similarly, with the death of the wife, her title or ownership in her share of the community property ends, and passes to her heirs or other appointees. More than this, her death, by ending the marital community, liberates her husband's share from the restrictions which the existence of the community had placed upon his control of it. He acquires by her death, the right to have his share of the community separated from hers by partition, and to hold it free of all controls. He obtains, for the first time, the right to give away his immovables, and the right to give away his movables as a whole or by a fraction of the whole. Here too, the wife's death brings into being a new set of relationships with respect to his share of the community as well as hers, among which are new powers of control and disposition which are proper subjects of an excise tax measured by the value of his share. And while we do not rest decision on the point, it is of some significance that this shift of legal relationships effects a shift in point of economic substance. The precept that the wife is equal co-owner with her husband of community property undoubtedly calls into play within the marital relationship personal and psychological forces which have great importance in the practical determination of how community property shall be managed by the husband. Though it may be impossible fully to translate these imponderables into legal rules, the death of the wife undoubtedly brings, in every practical aspect, greater freedom to the husband in his disposition of that share of community property which is technically his, than is to be gathered solely from a reading of statutes and case law. . . .

What we have said of the nature and incidence of the tax on community property in large measure disposes of the various other contentions of appellees. Since the levy is an excise and not a property tax, the case is not one of taking the survivor's property to pay the tax on decedent's estate. As the tax is upon the surrender of old incidents of property by the decedent and the acquisition of new by the survivor, it is appropriately measured by the value of the property to which these incidents attach. The tax burden thus laid is not so unrelated to the privileges enjoyed by the taxpayers who are owners of the property affected that it can be said to be an arbitrary exercise of the taxing power. . . . While it may generally be true, as appellees argue, that neither the husband nor wife gains any over-all financial advantage when the other dies, it suffices that the decedent loses and the survivor acquires, with respect to the property taxed, substantial rights of enjoyment and control which may be of value. Liability to the tax, in order to avoid constitutional objection, does not have to rest upon the enjoyment by the taxpayer of all

the privileges and benefits of the most favored owner at a given time and place. Corliss v. Bowers, 281 U.S. 376; Reinecke v. Smith, 289 U.S. 172; cf. Burnet v. Guggenheim, 288 U.S. 280.

We find no basis for the contention that the tax is arbitrary and capricious because it taxes transfers at death and also the shifting at death of particular incidents of property. Congress is free to tax either or both, and here it has taxed both, as it may constitutionally do, in order to accomplish "the purposes and policy of taxation" to protect the revenue and avoid an unequal distribution of the tax burden.

Even if it could be thought to affect the constitutionality of the taxing statute, it is plain that the statute does not depend for its operation upon any presumption that the entire community property is owned or economically attributable to the spouse first to die. Save as the statute itself grants an exemption by such attribution, so far as the community property "may be shown to have been received as compensation for personal services actually rendered by the surviving spouse or derived originally from such compensation or from separate property of the surviving spouse," the tax is laid without regard to the economic source of the community property. Apart from the exemption, it is, as we have seen, the shifting at death of the incidents of the property, regardless of origin, which is the subject of the tax. . . .

Appellees suggest that interests in tenancies in common and limited partnerships are very like interests in community property, and that if the tax is to be uniform, the one cannot be taxed unless the others are also. But even if it be as appellees argue, that common law family partnership or other arrangements with different names can be so devised that the marital relationship is attended by the same powers and restrictions as those derived from the laws of the community property states, and that they are differently or more lightly taxed than community property interests, we find no lack of uniformity in the constitutional sense. The present amendment is geographically uniform in its application to the only subject of which it treats, community property interests, and it levies in every state an identical tax upon the subject matter included within its terms— defined property interests created by state law, having a common historical origin, a common name, and constituting a universally recognized distinct class of property interests. . . .

An excise tax, which the Constitution requires to be uniform, laid upon the shifting at death of some of the incidents of property, could hardly be thought to be a direct tax which must be apportioned. See Bromley v. McCaughn [280 U.S. 124], 138. The contention that such a tax is direct because measured by the property whose incidents are shifted at death, was rejected in Bromley v. McCaughn, supra, and in Tyler v. United States [281 U.S. 497], 501-4, and Phillips v. Dime Trust Co., 284 U.S. 160, 165. A tax imposed upon the exercise of some of the numerous rights of property is clearly distinguishable from a direct tax, which falls upon the owner merely because he is owner, regardless of his use or disposition of the property. "The persistence of this distinction and the justification for it rest upon the historic fact that [excise] taxes of this type were not understood to be direct taxes when the Constitution was adopted and, as well, upon the reluctance of this Court to enlarge, by construction, limitations upon the sovereign power of taxation by Article I, §8, so vital to the maintenance of the national government." Bromley v. McCaughn, supra, 137.

The Tenth Amendment does not operate as a limitation upon the powers, expressed or implied, delegated to the national government. United States v. Darby, 312 U.S. 100, 123-4. The amendment has clearly placed no restriction upon the power delegated to the national government to lay an excise tax qua tax. Undoubtedly every tax which lays its burden on some and not others may have an incidental regulatory effect. But since that is an inseparable concomitant of the power to tax, the incidental regulatory effect of the tax is embraced within the power to lay it. It has long been settled that an Act of Congress which on its face purports to be an exercise of the taxing power, is not any the less so because the tax is burdensome or tends to restrict or suppress the thing taxed. In such a case it is not within the province of courts to inquire into the unexpressed purposes or motives which may have moved Congress to exercise a power constitutionally conferred upon it. Sonzinsky v. United States, 300 U.S. 506, 513-514, and cases cited. [326 U.S. at 346-362.]

In a concurring opinion, Mr. Justice Douglas, joined by Mr. Justice Black, said:

> Much may be said for the community property theory that the accumulations of property during marriage are as much the product of the activities of the wife as those of the titular bread-winner.* . . . But I can see no reason why that which is in fact an economic unit may not be treated as one in law. For as Mr. Justice Holmes pointed out in his dissent, there is a community of interest "when two spouses live together and when usually each would get the benefit of the income of each without inquiry into the source." And he went on to say "Taxation may consider not only command over, but actual enjoyment of, the property taxed." 284 U.S. pp. 219-220. Cf. Helvering v. Clifford, 309 U.S. 331, 335-337.
>
> The Congress has not gone the full distance here. It has not included in one estate all the property owned by husband and wife.† . . . Congress, to be sure, has disregarded the manner in which Louisiana divided "ownership" of property between husband and wife. But as between husband and wife, notions of "vested interests," "ownership," and the like, established by local law, are no sure guide to what "belongs" to one or the other in any practical sense. We would be blind to the usual implications of the intimate relationship of marriage if we forced Congress to treat such divisions of "ownership" the same way it does divisions of "ownership" among strangers. I find no such compulsion in the Constitution. [326 U.S. at 365-366.]

The provision of the Revenue Act of 1942 that was upheld by the Supreme Court in Fernandez v. Wiener concerned the estate tax consequences of community property. The same legislation attempted to equalize the community property and common law systems in the federal gift tax field by requiring a gift of community property to be treated as a gift by the husband unless it was attributable to the wife's personal services or separate property. The constitutionality of this provision was upheld on the authority of Fernandez v. Wiener in Francis v. Commissioner, 8 T.C. 822 (1947), and Beavers v. Commissioner, 165 F.2d 208 (5th Cir. 1947), cert. denied, 334 U.S. 811.

3. *The Marital Deduction and Split Gift Provisions of the Revenue Act of 1948*

The 1942 legislation left intact the income tax advantages of community property, with the result (described supra p. 332) that the community property system began to spread to the east and north of its historic area. Finally, when Congress decided in 1948 to attack the income tax disparity between the two property systems by authorizing the income-splitting joint return, rather than by requiring the income from community property to be reported by the spouse whose personal services or separate property created it, the way was cleared for an abandonment of the "economic source" approach of the 1942 estate and gift tax provisions. In short, Congress was persuaded in 1948 to follow the income tax equalization route of extending the delights of community property to common law property, in substitution for the converse philosophy of the 1942 legislation. The arguments for doing so were summarized by the Senate Finance Committee, in recommending enactment of the Revenue Act of 1948, as follows:

---

* Occasionally a couple in a common law state succeeds in establishing that the property accumulated by them during marriage is held in an informal partnership because they both contributed capital and services to a family business with a tacit understanding that the profits and losses would be shared equally. For an example of this type of do-it-yourself community property, see United States v. Neel, supra page 1081, holding that only one half of such property was owned by the husband within the meaning of §2033. — Ed.

† On the constitutional propriety of including all of the community property, plus all of the separate property, in the gross estate of the first spouse to die, see Eisenstein, Estate Taxes and the Higher Learning of the Supreme Court, 3 Tax L. Rev. 395, 549-561 (1948). — Ed.

Unfortunately, a number of problems have arisen under the 1942 amendments. Most important of these is the fact that geographical equalization has not been realized in a typical situation. Furthermore, the problem of determining the economic contribution of the surviving spouse to the community has resulted in an extremely difficult problem of "tracing." Severe hardship also results where, because the entire community property is includible in his gross estate, the estate tax of the decedent is larger than the community property subject to his power of disposition. For example, if a decedent is economically responsible for the entire community this average tax rate on his estate may exceed 50 per cent. However, only half of the community is subject to his power of disposition. Thus the share of the community already belonging to his spouse may be required to bear part of the tax although the spouse does not inherit any property under State law.

The most obvious instance of the failure to attain equalization results from the widespread use of life tenancies in the common-law States. In this situation, the husband transfers or bequeaths to his wife a life estate, with remainder over to the children. At his death the whole of the estate is taxed, but at the wife's death there is no tax on the cessation of her life estate. On the other hand, in a community-property State, the husband may not by his will dispose of his wife's interest in community property. If he bequeaths his one-half interest in the community to his wife for life with remainder over to the children, the entire community may be included in his gross estate, and on the death of the wife, one-half the community is also included in her estate. Thus the common-law couple is subject only to a single transfer tax, whereas the community-property couple pays two transfer taxes, one on an estate of equal size and one on an estate of half the size of that passing in the common-law State.

The "tracing problem" arises under the 1942 amendments because of the need for identifying portions of the community contributed by each spouse. Establishing the fact that particular assets of the community are derived from "compensation for personal services actually rendered by the survivor . . . ," is impossible in a great many situations. Under the 1942 amendments this tracing problem is of far larger dimensions in community-property States than in common-law jurisdictions, where it is limited primarily to joint tenancies, tenancies by the entirety, and joint bank accounts.

Your committee does not believe that a satisfactory solution to the problem of geographical equalization or the difficulties of tracing can be found under the 1942 amendments or amendments using a similar theoretical approach. Hence the repeal of these amendments is recommended, effective with respect to gifts made after the date of enactment of this bill and with respect to the estates of decedents dying after the date of such enactment. Your committee would be unwilling, however, merely to repeal the 1942 amendments. Repeal alone would reproduce the pre-1942 results, which are even further from equalization than existing law.

With the repeal of the 1942 amendments your committee recommends estate and gift tax splitting which is similar in its effects to the splitting of the income tax provided for in this bill. It is recognized that complete equalization of the estate and gift taxes can not be achieved because of the inherent differences between community property and noncommunity property. However, the new provisions will result in equality in the important situations.

Under the estate-tax provision of your committee's bill a decedent spouse is allowed a marital deduction from his gross estate in the amount of the value of all interests in property passing outright from the decedent to the surviving spouse by way of bequest, devise, transfer, right of survivorship in jointly held property, etc. The deduction is limited to an amount not in excess of 50 per cent of the adjusted gross estate.

Under the gift-tax provisions of your committee's bill a donor spouse is allowed a deduction for every outright transfer by gift to his spouse, such deduction to be an amount equal to one-half of the value of the interest transferred. In the case of a transfer by gift by a married person to persons other than his spouse, the interest transferred may be considered as made one-half by each, if the spouses so elect.

Under both the estate and gift taxes the marital deduction does not apply to the decedent's or the donor's interest in community property. This exception was necessary because after the repeal of the 1942 amendments the surviving spouse in a community property State will receive one-half of the community property tax-free. Similarly, a donor

spouse will be taxable on only one-half the value of any gifts made out of the community property. Although the marital deduction does not apply to community property, it will apply, in general, to the separate property of a decedent or a donor in a community-property State.

In the preceding paragraphs it has been stated that the interest in property must pass outright to the surviving or donee spouse to qualify for the marital deduction. This is intended to restrict the deduction to those cases where the decedent or donor passes to his spouse all of his interest in the property. This will equate the decedent in the common-law State with the decedent in the community-property State who cannot by his will effect in any way the surviving spouse's interest in the community property. Thus, a deduction will not be allowed under the amendments if the only interest given a spouse is in property in which the decedent or donor also gave an interest to some one else who may possess or enjoy the property after the donee spouse dies. However, if the only interest the husband has in the property is a terminable interest, such as a lease, and he gives his wife his entire interest in the property, then the deduction is permitted.

Among the exceptions to this rule is the recognition of one of the customary modes of transfer of property in common-law States. The deduction is applicable where the decedent or donor creates a trust, the income of which the beneficiary or donee spouse is entitled to for his life, with a taxable power of appointment over the corpus of such trust in the spouse. Thus the property subject to the taxable power of appointment will be includible in the gross estate of the beneficiary or donee spouse unless it has been dissipated in the interval. [S. Rept. No. 1013, 88th Cong., 2d Sess., reprinted in 1948-2 C.B. 285, 304-305.]

President Truman vetoed the proposed Revenue Act of 1948 on the ground that "nearly all of the $250,000,000 annual reduction would go to only about 12,000 of the most wealthy families," saying also that the 1942 legislation achieved equalization between community property and common law states in the estate and gift tax areas "in all essential respects." The bill was passed over his veto on April 2, 1948.

NOTE

1. *The 1948 marital deduction and split gift provisions.* Aside from its revenue effects, the marital deduction created by the 1948 legislation, and now embodied in §2056, has drastically affected the process of estate planning and the drafting of wills. Its complex provisions are considered infra page 1286. For the correlative marital deduction allowed by §2523 in computing the taxable amount when a gift is made by one spouse to the other and the "split gift" device of §2513, under which a gift by a married person to a third person may be treated as made one half by him and one half by his spouse, see page 1320 infra.

2. *Community property and the estate tax.* As the Senate Finance Committee Report quoted supra stated, the 1942 estate and gift tax provisions created a "tracing problem" for married couples owning community property. Thus, if both H and W invested separate property in a business and then performed services without drawing salaries, the assets on the death of one would have to be allocated, under the 1942 provisions, among four categories: (1) decedent's separate property; (2) survivor's separate property; (3) community property earned by decedent; and (4) community property earned by survivor. Categories (1) and (3) would be taxed to decedent's estate. See Neumann's Estate v. Commissioner, 9 T.C. 1120 (1947). Even after the 1948 repeal of the 1942 amendments, it is necessary to allocate such assets among three categories: (1) as above; (2) as above; and (3) community property. This, of course, is because 100 per cent of (1) but only 50 per cent of (3) is includible in the decedent's estate. Is this allocation substantially less onerous than that required by the 1942 provisions? See Duncan v. United States, 247 F.2d 845 (5th Cir. 1957); Vogel's Estate v. Commissioner, 278 F.2d 548 (9th Cir. 1960).

3. *Community property and the gift tax.* How is gift tax liability to be computed on a gratuitous transfer of community property to a third person? As to the husband's power to make a gift of community property without his wife's consent, see de Funiak,

Principles of Community Property, Section 122 (1943); Coulter, Limitations on the Power of a Community Manager to Make Gifts of Community Property, 28 Ore. L. Rev. 210 (1949).

Is there a gift tax on the conversion of community property into the separate property of H or W? On the conversion of separate property into community property? Is the $3000 exclusion applicable in the latter instance? Roeser v. Commissioner, 2 T.C. 298, 303 (1943); Perkins v. Commissioner, 1 T.C. 982 (1943); Damner v. Commissioner, 3 T.C. 638 (1944).

4. *References*. Thurman, Federal Estate and Gift Taxation of Community Property, 1 Ariz. L. Rev. 253 (1959); Jackson, Community Property and Federal Taxes, 12 Sw. L.J. 1 (1958).

SECTION D. JOINTLY HELD PROPERTY: §2040

In Tyler v. United States, 281 U.S. 497 (1930), the Supreme Court upheld as constitutional §202(c) of the Revenue Act of 1916, which was the forerunner of §2040 of the 1954 Code, as applied to a tenancy by the entirety created after the statute was enacted. The Court held that the tax was an excise, not an unapportioned direct tax:

> The question . . . is, not whether there has been, in the strict sense of that word, a "transfer" of the property by the death of the decedent, or a receipt of it by right of succession, but whether the death has brought into being or ripened for the survivor, property rights of such character as to make appropriate the imposition of a tax upon that result (which Congress may call a transfer tax, a death duty or anything else it sees fit), to be measured, in whole or in part, by the value of such rights. . . .
>
> At . . . [the co-tenant's] death . . . and because of it, . . . [the survivor] for the first time, became entitled to exclusive possession, use and enjoyment; she ceased to hold the property subject to qualifications imposed by the law relating to tenancy by the entirety, and became entitled to hold and enjoy it absolutely as her own; and then, and then only, she acquired the power, not theretofore possessed, of disposing of the property by an exercise of her sole will. Thus the death of one of the parties to the tenancy became the "generating source" of important and definite accessions to the property rights of the other. These circumstances, together with the fact, the existence of which the statute requires, that no part of the property originally had belonged to the wife, are sufficient, in our opinion, to make valid the inclusion of the property in the gross estate which forms the primary base for the measurement of the tax. [281 U.S. at 503-504.]

In Third National Bank & Trust Co. v. White, 287 U.S. 577 (1932), the Court affirmed, per curiam, a judgment applying the same principle to a pre-1916 tenancy by the entirety.

Where property is held in joint tenancy, rather than in tenancy by the entirety, either co-tenant can terminate the tenancy and get one half of the property, provided he acts while the other co-tenant is living. Despite this possibility of a severance, the Supreme Court has upheld the application of what is now §2040 to property held in joint tenancy, whether the tenancy was created after or before 1916. See United States v. Jacobs, 306 U.S. 363, 369-371 (1939):

> Since a joint tenant's interest in realty is severable and subject to sale, the argument is that upon the death of a co-tenant the survivor actually receives nothing more than the decedent's one-half interest and therefore no more can be subjected to a death duty. On the other hand, respondent explains the permissible taxation of the whole of a tenancy by the entirety by reference to the "amiable fiction" of the common law, under which ownership of a husband and wife in tenancy by the entirety is deemed a single individual unity and each owns all and every part of the property so held. By virtue of this feudal fiction of complete ownership in each of two persons, the surviving tenant

by the entirety is conceived to be the recipient of all the property upon the death of the co-tenant, and therefore — it is said — all the property can be taxed.

The constitutionality of an exercise of the taxing power of Congress is not to be determined by such shadowy and intricate distinctions of common law property concepts and ancient fictions. . . .

While it is true that until the death of decedent here each joint tenant possessed the right to sever the joint tenancy, each was nevertheless subjected to the hazard of losing the complete estate to the other as survivor. Prior to decedent's death, his wife had no right to dispose of her interest by will, nor could it pass to her legal heirs. She might survive and thereby obtain a complete fee to the property with attendant rights of possession and disposition by will or otherwise. Until the death of her co-tenant, the wife could have severed the joint tenancy and thus have escaped the application of the estate tax of which she complains. Upon the death of her co-tenant she for the first time became possessed of the sole right to sell the entire property without risk of loss which might have resulted from partition or separate sale of her interest while decedent lived. There was — at his death — a distinct shifting of economic interest, a decided change for the survivor's benefit. This termination of a joint tenancy marked by a change in the nature of ownership of property was designated by Congress as an appropriate occasion for the imposition of a tax. Neither the amount of the tax nor its application to the survivor's change of status and ownership, was in any manner dependent upon the date of the joint tenancy's creation, whether before, or after 1916. It is immaterial that Congress chose to measure the amount of the tax by a percentage of the total value of the property, rather than by a part, or by a set sum for each such change. The wisdom both of the tax and of its measurement was for Congress to determine.

What are the economic differences between a tenancy by the entirety and a joint tenancy? Are they "shadowy and intricate"? Do they warrant divergent tax treatment? On the constitutional issues, see Eisenstein, Estate Taxes and the Higher Learning of the Supreme Court, 3 Tax L. Rev. 395, 408-421 (1948).

The Regulations state that §2040 "has no application to property held by the decedent and any other person (or persons) as tenants in common." Regs. §20.2040-1(b). How *is* property held in a tenancy in common to be treated when one of the tenants dies?

HARVEY v. UNITED STATES

185 F.2d 463 (7th Cir. 1950)

Before MAJOR, Chief Judge and DUFFY and LINDLEY, Circuit Judges.

LINDLEY, Circuit Judge.

Plaintiff, as executrix of the estate of her deceased husband, Arlington C. Harvey, filed an estate tax return showing no tax due. The Commissioner assessed a deficiency in the amount of $32,151.30, which, with interest, she paid under protest. Her claim for refund having been rejected, she instituted suit in the District Court for recovery of the tax paid and obtained judgment. The principal contention of the government on appeal is that the trial court erred in deciding that certain property held by plaintiff and her husband in joint tenancy came within the scope of the exception contained in [§2040, relating to property that "originally belonged" to the survivor], and, consequently, was not part of the decedent's taxable estate. . . .

The tax return disclosed that the decedent was, at the time of his death, joint owner with his wife of property of the value of $200,709.78. Plaintiff asserted the right to deduct $143,450 from the gross value, because of contributions made by the wife, out of "funds and property separately owned" by her, in acquisition of the jointly held property. However, the Commissioner determined that the entire value of the jointly owned property, $201,859.78, should be included in the

decedent's gross estate, on the basis of his finding that all of the property was held in joint tenancy and that no part thereof had been shown to have belonged originally to the wife and never to have been received or acquired by her from the decedent for less than an adequate consideration in money or money's worth.

The stipulation of facts and the District Court's findings disclose that the decedent had, from time to time, made gifts of money and property to his wife, which, through successive investments, sales and reinvestments with resulting gains, had been transmuted into other property. The wife was at no time gainfully employed and had no property at the time of her marriage. In other words, the only assets acquired or owned by her were those given her by her husband, plus the profits and income produced by them, in either their original or converted forms, and the wife's contributions toward acquisition of the property which she held in joint tenancy with her husband at the time of his death, of necessity, emanated from these sources. The jointly held property is not the gift property itself, in either its original or transmuted form, but property traceable to (1) the profits made through sales of the original gift property and successive reinvestments of the proceeds of such sales or (2) the rents, interest and dividends produced by such property in its original or converted form, while title thereto was in the wife. The question presented by this appeal, then, is whether such profits and income, realized from property originally received by the wife as a gift from her husband and traceable into property which was held by them as joint tenants at the time of the husband's death, came within the exception to the requirement of [§2040] that the entire value of property held in joint tenancy shall be included in the decedent's gross estate. . . .

If the government's contention that the Commissioner correctly determined that the full value of the jointly owned property should have been included in the decedent's gross estate for estate tax purposes is to prevail, it must show (1) that, at least for the purposes of [§2040] of the Internal Revenue Code, profits and income which are produced by gift property subsequent to the making of the gift do not belong "originally" to the donee but are "received or acquired" by her from the donor, for the statute expressly exempts such part of the jointly held property as "originally" belonged to the surviving joint tenant and was not "received or acquired" by her from the decedent for less than an adequate and full consideration, or, in the alternative, (2) that the words "or produced by property which had been received or acquired" be read into the statute, so that the exception clause of [§2040] would read: "except such part thereof as may be shown to have originally belonged to such other person and never to have been received or acquired or *produced by property which was received or acquired* by the latter from the decedent for less than an adequate and full consideration in money or money's worth . . ." The cases relied on by the government fall short, we think, of establishing either of these postulates.

In Tyler v. United States, 281 U.S. 497, the Supreme Court, in sustaining [§2040] against attacks of unconstitutionality, held only that it was not arbitrary, capricious or violative of the due process clause of the Fifth Amendment to require that there be included in the gross estate of a decedent the total value of the property held by him and another as tenants by the entirety, the specific property having come to the tenancy as a gift from the decedent. United States v. Jacobs, 306 U.S. 363, 371-373; and Fernandez v. Wiener, 326 U.S. 340, likewise involve questions of constitutionality, the former holding that the statutory provision here involved was applicable and, when so applied, constitutional where the property held in joint tenancy had originally been received by the surviving joint tenant, *prior to the passage of the statute,* as a gift from the decedent, and the latter upholding the constitutionality of Section 811(e)(2) of the [1939] Code

(relating to the taxation of community property), which has since been repealed.* These cases, although perhaps persuasive of the proposition that a statute requiring inclusion in the gross estate of a decedent of all property held in joint tenancy by the decedent and any other person, irrespective of the source of the property so held, would not be unconstitutional, certainly do not justify us in saying that this statute as written, is to be interpreted as the government contends it should be in the instant case.

Hornor's Estate v. Commissioner, 3 Cir., 130 F.2d 649 and Stuart v. Hassett, D.C., 41 F. Supp. 905, also relied on by the government, are decisions which go no further than to apply the provisions of [§2040] to cases which fall clearly within its orbit. In the first of these cases, it was held that the entire value of property owned by the decedent and his wife as tenants by the entirety was taxable to the decedent's estate, his wife having contributed to the tenancy nothing other than property given her by the decedent, while in the *Stuart* case it was held that, where the decedent paid for property to which title was taken in his wife's name, and that property was subsequently conveyed by the wife to a straw who reconveyed to the decedent and his wife as joint tenants, the entire value of the property was taxable to the decedent's estate. And, finally, Estate of Howard v. Commissioner, 9 T.C. 1192, the only cited case which deals with the precise question presented by this appeal, held that, of the jointly owned property there involved, that portion which was shown to have been purchased out of dividends received by the wife on stock which the decedent had previously given her was within the exception set out in [§2040], the Tax Court thus rejecting the interpretation there urged by the Commissioner, which is, of course, the very interpretation now pressed by the government.

It seems clear that none of the cases cited contains any support for the novel proposition that income produced by gift property, after the gift has been completed, belongs to the donor and is property received or acquired from him by the donee; nor is there, in these cases, anything to impeach the conclusion of the trial court, or that of the Tax Court in the *Howard* case, that the income produced by property of any kind belongs to the person who owns the property at the time it produces such income and does not originate with a donor who has made a completed gift of that property prior to its production of the income. Similarly, they fail to sustain the contention that the statute should be interpreted as excepting from inclusion in the gross estate such part of the jointly held property "as may be shown to have originally belonged to such other person and never to have been received or acquired *or produced by property which was received or acquired* by the latter from the decedent for less than an adequate and full consideration in money or money's worth." . . .

Although it concedes that the case of Estate of Howard v. Commissioner, 9 T.C. 1192, supports the decision of the District Court insofar as it relates to dividends, rentals and interest, the government contends that the case "apparently" supports its position with respect to profits derived from the sale of property previously received by the surviving joint tenant as a gift from the decedent. This contention is founded on the court's statement that "If the proceeds from the sale of this stock had been deposited in the joint bank account, that would be another matter." Placing these words in context, however, it is obvious that all the Tax Court was saying was that if gift property is converted into another

* Section 811(e)(2) of the 1939 Code, in force from 1942 to 1948, required community property to be included in its entirety in the gross estate of the first spouse to die, except to the extent that it was shown to be attributable to the surviving spouse's earnings or separate property; but in any event, one half was includible because of the decedent's power of testamentary disposition. Supra page 1107. — ED.

form of property, which is then placed in joint tenancy, the converted property is not within the exception provided for in [§2040]; its statement can not logically be interpreted as meaning that "profits" or "gains," as distinguished from "proceeds" or "property received in exchange," do not fall within the scope of the exception. Moreover, no reason is suggested for holding that one form of income, i.e., "profit gained through a sale or conversion of capital assets," Eisner v. Macomber, 252 U.S. 189, 207, is outside the exception, whereas other forms of income, such as dividends, rentals and interest, fall within its terms. It follows that the government's contention that the full value of the property held in joint tenancy by decedent and his wife at the time of his death should have been included in decedent's gross estate must be rejected. . . .

The trial court's conclusion that certain certificates of shares having an aggregate value of $75,000, along with some farm equipment valued at $10,250, were owned by the decedent and his wife as tenants in common, rather than as joint tenants is also attacked. Six of the certificates were payable to "A. C. Harvey or Elizabeth Harvey"; three to "either A. C. or E. C. Harvey"; and the remaining four to "A. C. Harvey and/or E. C. Harvey." The government argues that in each instance, the quoted language satisfies the requirements of the Illinois statute which abolished the right of survivorship as between joint owners of personal property (excepting executors and trustees) and converted joint tenancies into tenancies in common in all cases except those in which there is a "will or other instrument in writing expressing an intention to create a joint tenancy in personal property with the right of survivorship." Ill. Rev. Stat. Ch. 76, Sec. 2. With respect to the farm equipment, it is the government's position that, since it was purchased with funds drawn from a joint bank account, it too was held in joint tenancy. The United States also relies on the fact that, on the tax return, the wife as executrix, listed the certificates and the farm equipment as jointly owned property, but this fact is of no avail to the government, for the form of ownership of property is not determined by the manner in which it is listed on a tax return but by reference to the state law applicable thereto. Greenwood v. Commissioner, 9 Cir., 134 F.2d 915. And, in view of the provisions of the applicable Illinois statute, it is evident that the District Court correctly held that the farm equipment, as to which there was no written instrument of any kind to satisfy the statutory requirement, was owned by the decedent and his wife as tenants in common. Thus, the only question is whether the language of the certificates can be said to express "an intention to create a joint tenancy in personal property with the right of survivorship."

That the Illinois courts do not regard the term "either . . . or" as sufficiently expressive of an intention to create a joint tenancy is clear from the decision in Lindner & Boyden Bank v. Wardrop, 370 Ill. 310, 18 N.E.2d 897, which involved a certificate of deposit which read, "William Wardrop or Bertha Nash has deposited in this bank seven hundred fifty and no/100 dollars payable to the order of either of them. . . ." The court, stating that "no question of survivorship arises since the certificate does not so provide," held this language insufficient to create a joint tenancy. The same result was reached where certificates were issued in the names of a husband and wife and made payable to either of them. Englebrecht v. Englebrecht, 323 Ill. 208, 153 N.E. 827. Illustrative of the marked reluctance of the Illinois courts to allow creation of a joint tenancy in personal property is the recent case, In re Wilson's Estate, 404 Ill. 207, 88 N.E.2d 662, 663, Note, 45 Ill. L. Rev. 285, in which the state Supreme Court held that no joint tenancy existed with respect to the contents of a safe deposit box, though the lease card for the box bore the words "as joint tenants with the right of survivorship and not as tenants in common" and the box itself contained a note written

by the husband stating that the money which was in the box was held in joint tenancy by his wife and himself. Thus, it seems clear that the District Court correctly determined that, under the law of Illinois, the certificates were held by the decedent and his wife as tenants in common and not as joint tenants.

The government has suggested that, even though it is held that the decedent and his wife owned the certificates and the farm equipment as tenants in common, still it was incumbent on the wife to show the amount contributed by her in the acquisition of this property and that only such amount may properly be deducted from the decedent's gross estate; consequently, it cites as error the District Court's allowance of the deduction of one half the value of the aforementioned property. The fallacy in this argument is that the provisions of [§2040] are not applicable to property held in tenancy in common. See Treasury Regs. [§20.2040-1(b)]. Therefore, since it is the law of Illinois, that, absent evidence to the contrary, tenants in common take equal shares, Keuper v. Mette's Unknown Heir, 239 Ill. 586, 592, 88 N.E. 218, the allowance of the deduction of one-half the value of the property so held was entirely proper.

NOTE

1. *Implications of Harvey case.* Is the result in the *Harvey* case in harmony with the purpose of the statute? Consider these problems of applying the *Harvey* case, assuming in each case that H gave W stock worth $50,000:

(a) W receives a dividend of $20,000 (no substantial profits having been realized by the corporation after the gift to W) and uses this sum to purchase jointly held property.

(b) On selling the stock for $75,000, W deposits the entire amount in her bank account. Thereafter she uses $25,000 to buy property in joint tenancy.

(c) When the stock is worth $75,000, W uses it to purchase property in their joint name. Is this to be treated differently from the sale of the stock for $75,000, followed by a purchase of the jointly held property for cash?

See also First Nat. Bank of Kansas City v. United States, 223 F. Supp. 963 (W.D. Mo. 1963) (stock given to wife by husband in 1936 and sold by her in 1948; held, jointly held assets acquired with proceeds of sale not includible in estate of husband, who predeceased wife); Tuck v. United States, 282 F.2d 405 (9th Cir. 1960) (decedent gave shares of stock to wife in 1919, which she placed in joint tenancy in 1922 together with stock dividends received in 1921; held, decedent's estate includes both original and dividend shares where latter represented pre-1919 earnings); McGrew's Estate v. Commissioner, 135 F.2d 158 (6th Cir. 1943) (held, on the facts, that funds used by wife to open joint bank account were received from decedent as a gift rather than to repay prior advances by her to him); Bremer v. Luff, 7 F. Supp. 148 (N.D.N.Y. 1933) (wife's liability on mortgage treated as consideration attributable to her).

In United States v. Neel, summarized supra page 1081, joint bank accounts were treated in effect as partnership accounts, so that only the decedent's pro rata interest was includible in his gross estate; for a similar case, see Berkowitz v. Commissioner, 108 F.2d 319 (3d Cir. 1939); but cf. Bushman v. United States, 8 F. Supp. 694 (Ct. Cl. 1934), cert. denied, 295 U.S. 756 (1935).

For the possibility that a completed inter vivos gift of property may be made even though, as a matter of convenience, it is held in joint ownership, see Doyle's Estate v. Commissioner, 32 T.C. 1209 (1959) (on the facts, completed gift not established).

2. *Jointly held property attributable to surviving spouse.* If the jointly held property is attributable in full to the surviving spouse, §2040 does not require its inclusion in the decedent's gross estate. Moreover, it is widely assumed that nothing is includible under §2033 in such a case even though the decedent until his death could have made an effective conveyance of one half of the property. (A similar assumption is customary regarding non-inclusion under §2041, relating to powers of appointment.) Would an amendment of the statute to take account of the decedent's economic control be appropriate? Note that the 1942-1948 treatment of community property (supra p. 1107) required one

half to be included in the estate of the first spouse to die, in recognition of his testamentary power over this amount, even though the surviving spouse was the sole economic source of the community property.

3. *Presumptions.* For the effect of local law presumptions regarding the amount of consideration contributed by the parties to a joint tenancy, see Robinson v. Commissioner, 63 F.2d 652 (6th Cir. 1933), cert. denied, 289 U.S. 758 (state presumption does not override §2040's requirement of proof of survivor's contribution); City Bank Farmers Trust Co. v. Commissioner, 41 B.T.A. 1 (1940) (accord, even though evidence unobtainable because H and W perished in common disaster). Note the last sentence of the *Harvey* opinion, regarding the force of a local presumption that, if no intent to the contrary is shown, a conveyance to A and B creates a tenancy in common rather than a joint tenancy; see also Dennis v. Commissioner, 26 B.T.A. 1120 (1932) (state law controls).

The final clause of §2040 provides a federal rule for determining what fraction of jointly held property is to be included in the gross estate of the first tenant to die, if the tenants received the property by gift or bequest and their fractional interests were "not otherwise specified or fixed by law."

4. *Transfers of jointly held property in contemplation of death.* For the troublesome problems that arise if jointly held property is transferred in contemplation of death, see page 1143 infra.

5. *Gift tax on creation of joint tenancy or tenancy by entirety.* Section 2515 provides that the creation of a tenancy by the entirety (specially defined by §2515(d) to include a joint tenancy with right of survivorship) in real property between husband and wife shall not be treated as a transfer for federal gift tax purposes, regardless of the proportion in which the consideration for the property is paid, unless the donor makes an election to the contrary. The provision was enacted in 1954 because, according to the Senate Report on the 1954 Code (p. 128), many married couples who buy a home "have no intention of making a gift at the time of the creation of the tenancy or any knowledge that they are considered as having done so." Section 2515 applies only to real property, but it includes investment and business property as well as residences. Under §2515, a taxable gift will occur if the property is sold, unless the proceeds are distributed in proportion to each spouse's contribution to the property (including the original purchase price and payments for improvements or in reduction of a mortgage).

If §2515 is inapplicable (because the donor elected to have the transfer treated as a gift, the tenancy consists of personal property, or the tenancy is not between husband and wife), the gift tax results on the creation of a joint tenancy or tenancy by the entirety depend on whether the donee receives the right to sever the tenancy by a separate conveyance (as in the typical joint tenancy) or can make an effective conveyance under local law only if the other tenant joins in the conveyance (as in the typical tenancy by the entirety).

The creation of a joint tenancy between A and B constitutes a gift of one half of the value of the property by A (assuming he furnishes the entire consideration) to B, unless A retains the right to retake the property without B's consent (as in the case of the ordinary joint bank account or U.S. savings bond payable to A or B or the survivor). Regs. §25.2511-1(h)(4) and (5); but see Silverman v. McGinnes, 259 F.2d 731 (3d Cir. 1958) (effective inter vivos gift of U.S. Series E bonds, although registered in joint names). The creation of a tenancy by the entirety, however, is a gift of the actuarial value of B's interest, i.e., the right to receive the property if she survives A, plus the right to receive one half the income of the property in the interim. (In a few states, the wife may not be entitled to any of the income, in which event the gift consists of the survivorship interest alone.) Regs. §25.2515-2; Commissioner v. Hart, 106 F.2d 269 (3d Cir. 1939). For the possibility of a gift tax on a termination of a tenancy by the entirety, see Regs. §25.2515-4.

Is the gift tax exclusion allowable on the creation of a joint tenancy or tenancy by the entirety?

For the effect of the marital deduction in this area, see page 1286 infra.

6. *Gift tax credit.* If a gift tax is paid on the creation of a joint tenancy, and the property is included in the estate of the donor under §2040 because he was its economic

source, his estate will be entitled to a gift tax credit under §2012, although the amount credited will not necessarily be the full amount paid (infra p. 1330). If the donee dies first, however, so that the property reverts to the donor, it is possible that a gift tax credit will not be allowed to his estate because §2012 applies only if an "amount in respect of [the] gift is required to be included in the value of the gross estate of the decedent"; it is arguable that this does not apply to property owned by the donor, rather than by the donee, on the donor's death.

Rev. 3 (1948); Rosenberg, Gift Taxes on Estates by the Entireties, 24 Taxes 965 (1946); Comment, Problems of Estate and Gift Taxation of Joint Ownership Interests, 10 U.C.L.A. L. Rev. 1205 (1963).

CHAPTER 13

The Gross Estate: Transfers During Life

SECTION A. GIFTS IN CONTEMPLATION OF DEATH: §2035

Since the inception of the federal estate tax in 1916, property transferred by the decedent in contemplation of death has been swept back into his gross estate. From 1916 to 1950, the statute also contained a rebuttable presumption that a transfer by the decedent "of a material part of his property in the nature of a final disposition or distribution thereof," if made within 2 years of death, was a transfer in contemplation of death. The strength of the presumption was problematical; because the Commissioner's deficiencies are already prima facie correct, the presumption was likened to "a handkerchief thrown over something covered by a blanket also." Paul, Federal Estate and Gift Taxation 92 (1946 Supp.).

In 1926, when the 1924 federal gift tax was repealed (supra p. 1006), an irrebuttable presumption of transfer in contemplation of death was added to the estate tax law, applicable to gifts within 2 years of death, to the extent in excess of $5000 per donee. Three days later, the Supreme Court (Holmes, Brandeis, and Stone dissenting) held that a similar Wisconsin statute (as to gifts within six years of death) was in violation of the Fourteenth Amendment. Schlesinger v. Wisconsin, 270 U.S. 230 (1926). Mr. Justice McReynolds, writing for the Court, could find "no adequate basis" for distinguishing gifts made within the statutory period from those made outside it; as for the anti-evasion function of the presumption, he found it to be an unconstitutional attempt to subject " 'A' . . . to an exactment forbidden by the Constitution if this seems necessary in order to enable the State readily to collect lawful charges against 'B.' " In 1932, the Court held that the federal presumption of 1926 was forbidden by the Fifth Amendment over a strong dissent by Stone and Brandeis (Cardozo not participating), which analyzed in detail the government's factual and legal arguments in support of the presumption. Heiner v. Donnan, 285 U.S. 312 (1932). Following this decision, the irrebuttable presumption was repealed. As to the present vitality of Heiner v. Donnan, see 1 Paul, Federal Estate and Gift Taxation §6.26 (1942); Lowndes, Current Constitutional Problems in Federal Taxation, 4 Vand. L. Rev. 469, 488-490 (1951).

Throughout the period 1916-1950, transfers made outside the presumptive period could be included in the gross estate if, without recourse to the presumption, they were made in contemplation of death. In 1950, however, the final clause of what is now §2035(b) was enacted, providing that gifts made more than 3 years before death may not be included in the gross estate as gifts in contemplation of death. At the same time, the language of the rebuttable presumption was given in its present form, and the period to which it applies was extended from 2 to 3 years. The Senate Finance Committee (S. Rept. No. 2375, 81st Cong., 2d Sess., 1950-2 C.B. 524-5) explained the change as follows:

> While the inclusion in the gross estate of transfers in contemplation of death has long been regarded as necessary to prevent avoidance of the estate tax, the administration of this feature of the estate tax law has always proved difficult. Principally this is due

to the fact that contemplation of death deals with the intent of the transferor. Intent is extremely difficult to establish in any case and becomes increasingly so with the passage of time. Undoubtedly many gifts in contemplation of death have escaped the estate tax because of the difficulty which the Government encounters in reconstructing the motives of the deceased. On the other hand, complaints have been received that the Bureau of Internal Revenue has in some cases asserted that gifts made many years before death were in contemplation of death without having much basis for the assertion. As a result executors of estates are confronted with an unpleasant choice between compromising the asserted tax liability or engaging in expensive and difficult litigation. At the present time this problem hangs over any person who makes a gift, even though he expects to live for many years, unless he can prepare evidence demonstrating that the gift was made primarily for nontax reasons.

Section [2035(b)] removes from the scope of the contemplation of death clause all transfers made more than 3 years prior to the date of death. On the other hand, the burden of showing that the transfer was not in contemplation of death will be borne by the estate in all cases where the transfer was made within a period of 3 years ending with the date of death. This will strengthen the position of the Government in cases where the transfer occurred between 2 and 3 years prior to the date of death.

UNITED STATES v. WELLS

283 U.S. 102 (1931)

MR. CHIEF JUSTICE HUGHES delivered the opinion of the Court.

[The Court's statement of facts is omitted.]

The Court of Claims did not find, in terms, that the transfers in question were not made in contemplation of death, but it is evident that the court considered that its findings of fact amounted to that in substance. . . . The court said [39 F.2d at 1011]:

> The plaintiffs have not only overcome the [rebuttable 2-year] presumption . . . that the transfers were made in contemplation of death but have definitely established the fact that the immediate and moving cause of the transfers was the carrying out of a policy long followed by decedent in dealing with his children of making liberal gifts to them during his lifetime. He had consistently followed that policy for nearly thirty years and the three transfers in question were a continuation and final consummation of such policy. In the last transfer such amounts were given to his children as would even them up one with another, in the gifts and advancements made to them.
>
> That this was the motive which actuated the decedent in making these transfers seems unquestioned. He repeatedly, in letters to his children and in statements to business associates at about the time the transfers were made, gave this as his reason for such transfers.
>
> After the final transfer in which the advancements and gifts to the children were evened up in January, 1921, the decedent still possessed property of the value of nearly $900,000, from which he drew an annual income of approximately $50,000. At the time the transfers were made, decedent had no reason to believe otherwise than [that], aside from his asthma, he was, for a man of his age, in ordinary health. While he had gone through a most serious and painful illness, he had, as he believed, made an almost complete recovery. He was assured of this fact by his physician, an eminent specialist, in whom he had great confidence. The repeated statements made to him by close friends and associates, his daily activities in matters connected with his business affairs, his letters to his children assuring them of his renewed health, show that he fully believed the assurances given him by his physician that he was cured and had nothing to fear on account of his former illness.
>
> The presumption created by the statute that the transfers in question were made in contemplation of death can not stand against ascertained and proven facts showing the contrary to be true. The best evidence of the state of the decedent's health at the time the transfers were made is the statement of his doctor. The best evidence of the decedent's state of mind at that time and the reasons actuating him in making the transfers

are the statements and expressions of the decedent himself, supported as such statements are by all the circumstances concerning the transfers.

The Government contests the decision of the Court of Claims upon the ground that the conclusion was reached by an erroneous construction of the words "in contemplation of death" as used in the statute. The court held that " 'contemplation of death' does not mean that general knowledge of all men that they must die, but that there must be a present apprehension, from some existing bodily or mental condition or impending peril, creating a reasonable fear that death is near at hand, and that such reasonable fear or apprehension must be the direct or animating cause, and the only cause of the transfer." The Government insists that this definition is too narrow; that transfers in contemplation of death are not limited to those induced by a condition causing expectation of death in the near future; that the character of such gifts is determined by the state of mind of the donor at the time they are made, and that the statutory presumption may be overcome only by proof that the decedent's purpose in making the gift was to attain some object desirable to him during his life, as distinguished from the distribution of his estate as at death.

The phrase "in contemplation of death," previously found in state statutes, was first used by the Congress in the Revenue Act of 1916, imposing an estate tax.* It was coupled with a clause creating a statutory presumption in case of gifts within two years before death. The provision was continued in the Revenue Act of 1918, which governs the present case, and in later legislation. While the interpretation of the phrase has not been uniform, there has been agreement upon certain fundamental considerations. It is recognized that the reference is not to the general expectation of death which all entertain. It must be a particular concern, giving rise to a definite motive. The provision is not confined to gifts causa mortis, which are made in anticipation of impending death, are revocable, and are defeated if the donor survives the apprehended peril. Basket v. Hassell, 107 U.S. 602, 609, 610. The statutory description embraces gifts inter vivos, despite the fact that they are fully executed, are irrevocable and indefeasible. The quality which brings the transfer within the statute is indicated by the context and manifest purpose. Transfers in contemplation of death are included within the same category, for the purpose of taxation, with transfers intended to take effect at or after the death of the transferor. The dominant purpose is to reach substitutes for testamentary dispositions and thus to prevent the evasion of the estate tax. Nichols v. Coolidge, 274 U.S. 531, 542; Milliken v. United States, 283 U.S. 15. As the transfer may otherwise have all the indicia of a valid gift inter vivos, the differentiating factor must be found in the transferor's motive. Death must be "contemplated," that is, the motive which induces the transfer must be of the sort which leads to testamentary disposition. As a condition of body or mind that naturally gives rise to the feeling that death is near, that the donor is about to reach the moment of inevitable surrender of ownership, is most likely to prompt such a disposition to those who are deemed to be the proper objects of his bounty, the evidence of the existence or non-existence of such a condition at the time of the gift is obviously of great importance in determining whether it is made in contemplation of death. The natural and reasonable inference which may be drawn from the fact that but a short period

* The phrase first appeared in the New York Inheritance Tax Law of 1891 (Laws, 1891, c. 215, §1), and was early held to apply only to gifts causa mortis. Matter of Seaman, 147 N.Y. 69, 41 N.E. 401 (1895). The phrase soon found its way into the statutes of other states; by the time it appeared in the Revenue Act of 1916, it was generally held by state courts (including New York, in effect if not explicitly) not to be restricted to gifts causa mortis. Annotations, 18 L.R.A. (N.S.) 458 (1909); 46 id. 790 (1913); 7 A.L.R. 1028, 1030 (1920). — Ed.

intervenes between the transfer and death, is recognized by the statutory provision creating a presumption in the case of gifts within two years prior to death. But this presumption, by the statute before us, is expressly stated to be a rebuttable one, and the mere fact that death ensues even shortly after the gift does not determine absolutely that it is in contemplation of death. The question, necessarily, is as to the state of mind of the donor.

As the test, despite varying circumstances, is always to be found in motive, it cannot be said that the determinative motive is lacking merely because of the absence of a consciousness that death is imminent. It is contemplation of death, not necessarily contemplation of imminent death, to which the statute refers. It is conceivable that the idea of death may possess the mind so as to furnish a controlling motive for the disposition of property, although death is not thought to be close at hand. Old age may give premonitions and promptings independent of mortal disease. Yet age in itself cannot be regarded as furnishing a decisive test, for sound health and purposes associated with life, rather than with death, may motivate the transfer. The words "in contemplation of death" mean that the thought of death is the impelling cause of the transfer, and while the belief in the imminence of death may afford convincing evidence, the statute is not to be limited, and its purpose thwarted, by a rule of construction which in place of contemplation of death makes the final criterion to be an apprehension that death is "near at hand."

If it is the thought of death, as a controlling motive prompting the disposition of property, that affords the test, it follows that the statute does not embrace gifts inter vivos which spring from a different motive. Such transfers were made the subject of a distinct gift tax, since repealed. As illustrating transfers found to be related to purposes associated with life, rather than with the distribution of property in anticipation of death, the Government mentions transfers made "for the purpose of relieving the donor of the cares of management or in order that his children may experience the responsibilities of business under his guidance and supervision." The illustrations are useful but not exhaustive. The purposes which may be served by gifts are of great variety. It is common knowledge that a frequent inducement is, not only the desire to be relieved of responsibilities, but to have children, or others who may be the appropriate objects of the donor's bounty, independently established with competencies of their own, without being compelled to await the death of the donor and without particular consideration of that event. There may be the desire to recognize special needs or exigencies or to discharge moral obligations. The gratification of such desires may be a more compelling motive than any thought of death.

It is apparent that there can be no precise delimitation of the transactions embraced within the conception of transfers in "contemplation of death," as there can be none in relation to fraud, undue influence, due process of law, or other familiar legal concepts which are applicable to many varying circumstances. There is no escape from the necessity of carefully scrutinizing the circumstances of each case to detect the dominant motive of the donor in the light of his bodily and mental condition, and thus give effect to the manifest purpose of the statute.

We think that the Government is right in its criticism of the narrowness of the rule laid down by the Court of Claims, in requiring that there be a condition "creating a reasonable fear that death is *near at hand,*" and that *"such* reasonable fear or apprehension" must be "the only cause of the transfer." It is sufficient if contemplation of death be the inducing cause of the transfer whether or not death is believed to be near. But it does not appear that the decision of the court rests upon the limitation thus expressed. The court did not rely merely

upon the fact that at the time of the transfers decedent considered that he had recovered from his former illness and believed the assurances given him by his physician that he need have no fear of its recurrence or any "anxiety whatever about his state of health." That fact was manifestly important, but, in addition to that, the court held that "the immediate and moving cause of the transfers was the carrying out of a policy, long followed by decedent in dealing with his children, of making liberal gifts to them during his lifetime." The court regarded the transfers in question as "a continuation and final consummation of such policy," saying "that this was the motive which actuated the decedent in making these transfers seem unquestioned." In the view of the court as thus explicitly stated, not only was there no fear at the time of the transfers that death was near at hand, but the motive for the transfers brought them within the category of those which, as described by the Government, are intended by the donor "to accomplish some purpose desirable to him if he continues to live." In the presence of such a motive, appropriately found, and of the underlying facts which have been expressly found, there would be no ground for a reversal of the judgment merely because of an inaccuracy in the general statement as to the meaning of the statutory phrase. . . .

Judgment affirmed.

MR. JUSTICE ROBERTS took no part in the consideration or decision of this case.

ESTATE OF OLIVER JOHNSON v. COMMISSIONER

10 T.C. 680 (1948)

The Commissioner determined a deficiency of $44,765.91 in estate tax liability. The value of the gross estate was determined in part by including the value of property transferred by the decedent during his lifetime. The sole issue for decision is whether such property was transferred in contemplation of death. . . .

Findings of Fact

The parties have filed a stipulation of facts which is incorporated herein by reference.

The decedent, Oliver Johnson, died March 8, 1943, at the age of 94 years, a resident of Long Beach, California. He was survived by 5 children: C. Elmer Johnson, Alla J. Ross, Bertha J. Landreth, T. Leman Johnson, and Bula J. Simms. The children ranged between the ages of 50 and 68 at the date of decedent's death. The executrix of the estate is Alla J. Ross. The estate tax return was filed with the collector of internal revenue for the sixth district of California.

The decedent was born in Iowa on November 4, 1848. He was one of nine children, four of whom were alive in 1939. In 1878 he became a resident of Belleville, Kansas. In 1905 he moved to Courtland, Kansas, where he remained until 1918. During decedent's residence in Kansas he was primarily a farmer. He acquired 9 tracts of farm lands between 1883 and 1916, containing a total of 1,487½ acres in Republic County, Kansas. Two of these tracts were improved with a house and barns; 2 others with a house each. Sometime prior to 1918 the decedent placed the active farming of these properties with tenants. He also made loans on notes and mortgages. For a short time before the first World War he owned a controlling interest in a small bank in Courtland, Kansas.

In 1918 the decedent and his wife decided to leave Kansas in order to escape the cold weather and move to California, where they had wanted to live and where they could be out of doors more often. Pursuant to their decision, they

sold all of their household effects and set out for California by way of Wenatchee, Washington, where one or more of their children lived. They spent the winter in Washington and moved to Long Beach, California, in 1919.

The decedent arrived in Long Beach, California, shortly prior to his seventy-first birthday. He considered himself a retired farmer, but he retained an active interest in his farm properties. He returned to Kansas virtually every year during four or five months in the summer and fall of each year until 1939. During these months he inspected his farms, transacted business, and visited friends. In 1920 the decedent bought a house in Long Beach for himself and his wife. He acquired one other house in 1921 and in 1925 purchased a two-story office building in Corona, California, in which his daughter Bula and her husband operated a drug store.

In 1927 the decedent's wife died. The decedent purchased crypts for himself and his wife in the Sunnyside Mausoleum of Long Beach. The decedent then lived with his son Elmer for approximately one year. Thereafter he lived alone in rented rooms during the winters until 1937. In that year he purchased the Oliver Apartments in Long Beach, where he kept an apartment for himself until he moved to the home of his daughter Alla in August of 1940.

Prior to 1932 the decedent made a number of loans, usually at 6 per cent interest and secured by trust deeds and mortgages on real estate in California. These loans were made through the Golden State Bond & Mortgage Co. In 1932 the Golden State Bond & Mortgage Co. became financially embarrassed. Between 1932 and 1934 the decedent acquired the outright ownership of 21 or more small rental properties because of defaults on the loans he had made. In each case the decedent paid something for the equity and received deeds from the owners. In each case the title to these properties was encumbered by local tax and other municipal liens.

Between 1934 and 1939 the decedent owned a total of 28 or more properties in Southern California, some of which were occupied by more than one tenant. Rent collections, repairs, and clearing of the titles required the work of 2 men. The decedent, who was 85 years of age in 1933, worked from 9 in the morning until 4:30 or 5 o'clock at night, 4 and 5 days a week. In 1933 the decedent hired his son Elmer as a full time employee at a salary of $350 a month. This salary was raised to $400 a month for the first 6 months in 1939. Elmer furnished transportation, acted as bookkeeper, and filled out the decedent's tax returns for the years 1930 to 1939 inclusive. The decedent had not owned an automobile since 1918 and had never filled out his own tax return. The decedent kept some accounts in a pocket notebook and retained his bank statements. When the decedent returned to Kansas each year the management of the Long Beach properties was carried on by Elmer. Bula J. Simms and her husband collected the rents on the Corona property. Elmer and Bula were authorized to and did make deposits on behalf of the decedent in bank accounts he maintained in Long Beach and Corona, respectively.

Prior to 1939, the decedent had stated several times that he did not like small rental properties. He had so stated when a real estate broker attempted to interest him in such properties. In 1933 he told his daughter Bula that he was going to have to take active management of such properties, due to the failure of the mortgage company. He stated that he never liked the management and intended to give the properties to his children as soon as he could clear up the titles. He told the same thing to his son Leman in 1935, saying that when the titles were clear he was going to make a division of those properties for his children so that he could see them enjoy the properties while he was still alive. He was desirous of making an equal division and one that would satisfy the children.

He had told Elmer of his intentions about the property division on several occasions.

The last encumbrance was cleared away in late 1938. A few days prior to March 3, 1939, the decedent told his daughter Bertha and her husband, who were then visiting in Long Beach, that he had a surprise which he thought would make all the children happy. The decedent had itemized gifts of his real property for all the children, saying that he had always intended making the gifts but had never before had them in the proper shape, free and clear of encumbrances. He stated that he wanted the children to look over these properties in order to make a division that would satisfy all of them. The three of them then drove to Corona to tell his daughter Bula.

The next morning the decedent stated that he wanted the children to know why he was making the gifts of his real property. He said that he did not want them to think that he was not going to live very long because he expected to live a long time. He stated that he did not think he wanted to go back to Kansas again and that he did not want to be bothered with the rental properties. He said that he would keep his notes and mortgages and would therefore never have to go to his children for care. Thereafter the party returned to Long Beach and made a tour of the Long Beach properties with his son Elmer. A short time later an attorney was given a description of the properties and told to draw up the deeds, which the decedent signed on March 3, 1939. Two of the decedent's children were not present in Long Beach when the gifts were made.

The gifts consisted of all the decedent's real properties. At the date of the gifts the decedent owned 9 Kansas farms, and each of the chidren received at least one tract. The Corona property was given in equal, undivided shares to Bertha and Bula. The latter took title jointly with her husband. The remaining 21 properties which the decedent had acquired between 1932 and 1934, in addition to 6 properties which he had purchased outright, all located in Long Beach, were divided among all of the children. There was an oral condition to the gift. Extensive repairs and alterations had been undertaken on the Corona property. The parties orally agreed that all the rentals from the Long Beach properties would be applied on the cost of the Corona repairs until July 1, 1939. This was done. Thereafter the decedent took no part in the management of any of the real property.

The decedent had valued all his real property at $175,000 and divided it so that each child received property valued at $35,000. Three children requested that title be given to them jointly with their respective spouses. As a result, the decedent claimed exclusions of $32,000 and an exemption of $40,000 on his gift tax return filed on January 30, 1940. The tax paid amounted to $7,582.50. As the result of an audit by the Bureau of Internal Revenue the total valuation of the gifts was increased to $203,900, and an additional tax of $3,684.75 was later paid. The agreed value of the property at the date of decedent's death in 1943 was $255,950.

At the date of the gift the decedent retained notes and obligations executed by 17 parties, ranging in amounts between $49.10 and $21,000, which had an aggregate value of $43,255.21. All of these obligations paid 6 per cent interest with the exception of one or two of the smaller ones. The decedent also retained $6,178.64 in cash, of which $3,806.62 was in a savings bank in Los Angeles and the balance was in banks in Corona and Long Beach. The total property retained had an actual value of $49,433.53 at the date of the gift.

The decedent's age at the date of the gift on March 3, 1939, was 90 years and 4 months. He lived moderately and inexpensively. He lived in single rooms and ate at small restaurants. He bought ready-made clothes, and liked bright-

colored neckties. He had no expensive pastime or hobby. He had stated that he knew how to make money, but had never learned to spend it. In April of 1939 his daughter Alla moved into the Oliver Apartments which the decedent had given her on March 3, 1939. The decedent, who had lived there since 1937, began taking his meals from her. He paid her $25 a month for his room and $75 for meals and transportation. This latter amount was raised to $100 a month in 1941. The expenses of the decedent were not in excess of approximately $150 a month. The decedent reported in his income tax returns the following net income.

1936	$4,894.29	1940	$2,337.90
1937	8,869.02	1941	2,047.48
1938	5,458.06	1942	1,664.79
1939	5,718.13		

The decedent was independent of his family. He did not like to have his affairs handled by lawyers. He pursued his own hobbies. He liked to walk, ran his own errands, and regularly covered on foot the 9 blocks from his room to church alone. On one occasion in 1940 he walked some 70 blocks, accompanied by his daughter, in order to go to the bank, visit friends, and have dinner in downtown Long Beach. He walked as fast as anyone. He was erect and had a young man's carriage.

The decedent also liked to travel. Each year from 1928 to 1939 he traveled alone to Kansas for the purpose of overseeing his farms, and to many other states in order to visit friends and relatives. During these visits he was in the habit of corresponding with various members of his family. Numerous letters of decedent were introduced in evidence and are incorporated herein by reference. Their tone is cheerful, alert, and businesslike. The following is a typical example:

Courtland, Kansas, August 6, 1938

Mr. & Mrs. Grant and Bula
Corona, Calif.

Your good letter came to hand this day and I am pleased to hear the news. I will try to answer this time. Yes, I have been busy and over the river part of the time. But I will be done next week. The rains kept people out of the fields so much and we couldn't help that, see? All done but Orin Reid and Dan Rickle and he will finish next week. I hope he will finish my 60 acres. He will put my share with his and sell it for oatmeal and get a better price in that way. The wheat was not worth much this year, the corn over there is sure fine, plenty roasting now. But I fear corn will be cheap, only 40 cts. now. I sold the old corn for that price except one load I sold part at 50 cts. I am pleased that you went to Church and glad that Brother Gordon can go to Church. I am pleased with the tone of your letter, so much news to hear. I would be pleased to hear often, then I could answer often. Try it once.

As ever,
Oliver Johnson

Cousin Till Warner is very sick, had two strokes, No hope for her.

O.J.

The decedent liked to call on his children unexpectedly and some of his visits were as early as 7 o'clock in the morning. He occasionally took the bus to Corona, California, to visit his daughter Bula. In the fall of 1939 the decedent made a 2-day trip by automobile to Boulder Dam and Death Valley, a distance of 800 miles, with members of his family. In 1940 the decedent returned to Long Beach with a son-in-law after a visit in Washington. On one occasion the party motored approximately 700 miles in one day and spent the next 2 days walking

through the San Francisco Fair before they returned to Long Beach. On the occasion of the 700-mile drive decedent sat in the back seat and urged his son-in-law to drive faster. The decedent suffered no effects from these trips.

The decedent was proud of his vigor and physical appearance. He weighed approximately 145 pounds. At one time in 1938, in order to demonstrate his agility, he jumped into the air and clicked his heels together 2 or 3 times before descending to the floor. In getting up from a chair at all times pertinent hereto he would stand up straight without touching the arms of the chair. He regarded himself as younger than other old men not yet his age and would comment with ridicule upon their elderly appearance. He frequently stated that he expected to live to be a hundred years old. He appeared 12 to 15 years younger than he actually was and regarded himself as a younger man. He had a full head of hair, which was iron gray. He was cheerful by nature and kept himself busy. The decedent was mentally alert and knew his business affairs.

He was active in church affairs. He was a member of the Church of Christ, which he attended regularly three times a week. In addition to visiting, walking, and church-going, he pursued the hobbies of horseshoe pitching and woodworking. He had an expert's skill in horseshoe pitching, making a large percentage of ringers. The woodworking was usually done in the decedent's rooms. He constructed such items as cupboards and footstools.

On or about June 5, 1939, the decedent wrote, dated, and executed in his own hand his last will:

Long Beach, California, June 5th, 1939.

I, Oliver Johnson, a widower, hereby made [sic] my last will. I revoke all wills by me heretofore mad [sic]. I give all my property both real and personaly [sic], all bonds, stocks, and mortgages of which I die possessed to my five children named. C. Elmer Johnson, Alla J. Ross, Bertha J. Landreth, Leman Johnson, and Bula J. Simms. I appoint my daughter, Alla J. Ross, as Executrix of this will without bond, without help of lawyer or attorney and without order of court or judge.

It is my will that the above named, who are all my own children [sic] come together by themselves, after my death and divide it eagrable [sic] between them. Each child must settle his account with the estate so that it will be equal. I declare this is entirely written [sic] dated and signed by own hand.

In 1934 the decedent had a mild case of pneumonia, for which a doctor's services were required. The services of a nurse were not required. Between 1927 and 1939 the decedent occasionally visited doctors for mild complaints in the nature of colds, stomach aches, and light-headedness. The decedent did not use glasses and did not use a hearing aid, although his hearing was impaired. In 1938 or 1939 the decedent visited Dr. Bradford, a chiropractor, complaining of a stomach ache and light-headedness. The decedent told Dr. Bradford that he had been to a doctor who told him that he had high blood pressure. The chiropractor found a constriction around the decedent's stomach and liver which he attributed to dietary habits. After 12 to 15 treatments for a month or 6 weeks, the condition was corrected. The chiropractor had the opinion that nothing was organically wrong with the decedent. He found the patient to be remarkably preserved, mentally alert, and very spry.

On four occasions, August 23 and September 23, in 1940, and January 22 and 26 of 1941, the decedent was visited by Dr. Hoover, a medical practitioner, of Long Beach. On each of these occasions the decedent complained of pains in the abdomen. The doctor was of the opinion that the pains were the result of poor circulation, which in turn was traceable to auricular fibrillation. Auricular fibrillation is a condition which is caused by a deterioration or aging of the heart and is manifest through an irregular beating of the auricles of the heart. The

damage to the heart develops gradually over a long period of time, but the noticeable irregularity appears without warning. The irregularity has the effect of impairing the efficiency of the circulation. By administering digitalis the heart action is slowed and the heart operates more efficiently. On at least three of the doctor's visits, digitalis was prescribed.

On January 20, 1941, the decedent gave one of his daughters a general power of attorney. The decedent's health notably failed in the latter part of 1942 and the early part of 1943. His daughter Alla, with whom the decedent lived, became ill. She could not give the care that the decedent needed and therefore the decedent was moved to the Los Alamitos Sanatorium 2 months before he died. The immediate cause of the decedent's death on March 8, 1943, was acute congestive heart failure of one day's duration and bronchopneumonia of 10 days' duration. Senility was listed as an "other condition."

Between 1900 and 1916 the decedent gave each of his children a gift which he evaluated at $2,400 to $2,500. Elmer received a wagon and team and a half interest in a hardware store where he worked. An indebtedness of Leman was canceled in 1913. Bula received a house and lot when she was married. After 1929, pursuant to his deceased wife's request, the decedent gave each of his children a one-fifth share in a note executed by Landreth Brothers of Wenatchee, Washington. The principal of the note had been advanced after 1918 or 1919. The principal and accrued interest thereon amounted to approximately $100,000. Apparently, since the date of the gift $10,000 to $12,000 has been realized on each one-fifth share.

At other times the decedent gave pianos to two of the children and equivalent gifts to the other three. He gave footstools to each child. He had also given Chinese coats to the daughters and suits to the sons.

The decedent's dominant motive in making the gifts in question was to rid himself of the active management of the property transferred. The transfers were not made in contemplation of death.

Opinion

KERN, Judge.

The sole question is whether the value of the transfers of March 3, 1939, should be included in the gross estate of the decedent [as gifts in contemplation of death].

The ultimate question to be decided in this case, as in others arising under the quoted statute, is whether the dominant or impelling motive of decedent in making these transfers was associated with death and was prompted by the thought of death.

This question is a subjective one. It concerns the motives and mental processes of a particular human being, in this case one Oliver Johnson, who made the transfers in question more than 10 years before the hearings were held in this proceeding and who died more than 4 years before those hearings.

Among the circumstances to be considered and weighed in determining what was the dominant motive of the decedent in making inter vivos transfers of his property, are the following: (a) The age of the decedent at the time the transfers were made; (b) the decedent's health, as he knew it, at or before the time of the transfers; (c) the interval between the transfers and the decedent's death; (d) the amount of the property transferred in proportion to the amount of property retained; (e) the nature and disposition of the decedent, e.g., whether cheerful or gloomy, sanguine or morbid, optimistic or pessimistic; (f) the existence of a general testamentary scheme of which the transfers were a part; (g) the relationship

of the donee or donees to the decedent, i.e., whether they were the natural objects of his bounty; (h) the existence of a long established gift-making policy on the part of decedent; (i) the existence of a desire on the part of the decedent to escape the burden of managing property by transferring the property to others; (j) the existence of a desire on the part of the decedent to vicariously enjoy the enjoyment by the donees of the property transferred; and (k) the existence of the desire by the decedent of avoiding estate taxes by means of making inter vivos transfers of property. This is not a comprehensive list of the circumstances pertinent to the problem of what transfers are made in contemplation of death, but it includes most of the circumstances and considerations pertinent to the instant case.

Of these circumstances, some are favorable to respondent's contentions that the transfers were made in contemplation of death, and some are favorable to the position of petitioner that decedent's motives in making the transfers were associated with life rather than with death.

Those circumstances which tend to indicate that decedent's motives in making the transfers were associated with death are as follows: (a) The advanced age of decedent when he made the transfers; (b) the amount of the property transferred by decedent in proportion to the amount of property retained by him; and (c) the fact that the donees were all the children of decedent, the natural objects of his bounty and the legatees in his subsequently executed will.

The circumstances which tend to indicate that decedent's motives were associated with life are as follows: (a) Decedent's health at or before the time of the transfers was good; (b) decedent's nature and disposition were cheerful, sanguine, and optimistic; (c) there was an interval of four years between the time of the transfers and the time of decedent's death;* (d) there was at the time of the transfers no testamentary scheme on the part of decedent, decedent's only will (so far as the record discloses) having been made four months after the transfers; (e) the decedent had over a long period of time made gifts to the same donees and in the same proportions as to each other; and (f) the decedent desired to escape the burdens incident to the management of the properties transferred.

The evidence is not compelling as to two pertinent circumstances; viz., the desire of the decedent to derive pleasure from the enjoyment by his children of the property transferred to them, and his desire to save estate taxes by such transfers. The record as a whole, however, justifies the inference that decedent did derive pleasure from the enjoyment by his children of the property transferred to them, and that decedent was in no way interested in the saving of estate taxes.

With regard to the three circumstances which tend to favor respondent's contention, two of them are subject to minimizing qualifications. While the amount of the property transferred by decedent was large in proportion to the amount retained by him, nevertheless, the amount of property retained was enough in his judgment to support him in the frugal manner of living to which he was accustomed and which he evidently preferred. While the donees were his children and, as such, the natural objects of his testamentary bounty, they were also for the same reason the natural objects of his donative bounty.

With regard to the circumstances tending to favor petitioner's contention, many of them are subject to amplification. For example, to say that decedent's health was good seems inadequate in view of the testimony concerning his health given by respondent's own witness, a chiropractor who gave treatments to decedent over a period of approximately a month in 1938 or 1939. He testified that decedent was "wonderfully preserved for a man of his age," that "he didn't look

* Since 1950, transfers made more than 3 years prior to death have been immune to attack by virtue of the final clause of §2035(b). — Ed.

his age by 12 or 15 years," that he was "a jolly old fellow," very alert and very spry, that he was active and carried himself like a young man, that after his treatments "his troubles seemed to be all over," and that he said "he was going to be here a long time." It is impossible to read the record here without concluding that the decedent in 1939 was, and had been, in extraordinarily good health; and, further, that he took an almost childish pride in his health and vigor.

The evidence is also most convincing in regard to decedent's desire to escape the burdens incident to the management of the properties transferred. The testimony of decedent's children that he had on several occasions made statements that he did not like the care of rental properties and wished to give them away as soon as he could clear the properties from liens is credible in the light of the facts. A retired farmer, 85 years old, enjoying his old age in Southern California, who was suddenly faced during the depression years with the necessity of managing a substantial number of rental properties and thus sacrificing his horseshoe pitching and woodwork, would most naturally have a desire to get rid of this unwanted responsibility as soon as he felt it possible for him to do so. Having gone through the vexing and trying experience of managing a large number of rental properties for some five years, it was natural for him to feel a revulsion against a continued responsibility for any rental property and to add the few rental properties which he had acquired prior to 1932 to the properties which he desired to transfer. And his decision in 1939 to include in the transfers of properties his farms in Kansas was consistent with a desire to shed responsibilities and concentrate on the pleasure of living. For a man 90 years of age to prefer to remain in Southern California with his family and his hobbies rather than to go during the summer months to the Kansas wheat country is a decision which would more reasonably result from considerations in regard to a pleasant place for living than from considerations in regard to death.

Certain evidence indicates that the children of decedent desired him to make the transfers in question. It is quite possible that *their* motives in desiring him to do so were associated with his death and were caused by *their* contemplation of his death, but their motives are irrelevant unless it is shown that decedent's will was substantially subordinated to theirs. The record indicates, however, that decedent's will was independently his.

Were it not for the decedent's advanced age at the time of the transfers here in issue, we would have little difficulty in concluding that the transfers were not made in contemplation of death. The one evidentiary circumstance as to which respondent stands on firm ground is that decedent at the time of the transfers was an old man, indeed an unusually old man.

It may be that the norm for the consideration of the mind and motives of a man 90 years of age is that of a man weakened by senility and subject to the continual and unmistakable physical intimations of approaching disintegration, with a consequent concentration on the spiritual and material problems posed by death.

If that is the norm, then we are convinced by the evidence before us that the decedent was not normal. The record in this case portrays an old man of far different characteristics. He was an old man of amazing vigor who enjoyed "showing off" that vigor to his children and friends (frequently to their annoyance). He was alert and independent, cheerful, and interested in living, and, above all, proud of his vitality and comparative youthfulness.

This portrait may not be an accurate likeness of the real Oliver Johnson. It is possible that the verbal picture of Oliver created at the trial by the testimony of witnesses brought out by the skillful guidance of petitioner's counsel empha-

sized certain of his features and left others in shadow to the extent that the Oliver Johnson of the verbal portrait has more resemblance to a synthesis of decedents whose transfers had been held in many reported cases to have been made not in contemplation of death than to the real Oliver Johnson who transferred real estate in Southern California on March 3, 1939.* But the judicial process requires that we create our image of Oliver from the material in the record before us. We can not be certain that our portrait of Oliver is a lifelike replica of the real Oliver, but we are confident that it accurately reflects the portrait of Oliver drawn by the evidence in this record.

When old age has brought with it to a decedent the normal results, that is, physical illnesses and mental preoccupation with mortality, old age may be a decisive test in determining whether transfers made by the decedent were prompted by thought of death. But where old age has not brought with it to a decedent these normal results, ". . . age in itself can not be regarded as furnishing a decisive test, for sound health and purposes associated with life, rather than death, may motivate the transfer." United States v. Wells [supra p. 1122]. . . .

In the instant case we have concluded from all the evidence that in spite of decedent's unusually advanced age the dominant and impelling motive of decedent in making the transfers here involved was not the thought of death, but was the desire to escape the burdens incident to the management of the properties transferred. Therefore our decision on the issue submitted is that the transfers were not made by decedent in contemplation of death.

Reviewed by the Court.

Decision will be entered under Rule 50.

Van Fossan, Murdock, and Arnold, JJ., concur only in the result. Turner, J., dissents.

NOTE

1. *Avoidance of estate taxes as a "death" motive.* In the *Johnson* case, the court said that "the existence of the desire by the decedent of avoiding estate taxes by means of making inter vivos transfers of property," if established, is one of the circumstances to be weighed in determining whether a transfer is in contemplation of death. The Regulations provide, more firmly, that a transfer "is prompted by the thought of death if . . . made with the purpose of avoiding death taxes" and that a transfer so prompted is made in contemplation of death. Regs. §20.2035-1(c). In Denniston v. Commissioner, 106 F.2d 925, 928 (3d Cir. 1939), however, the court said:

> We think that because in carrying out a plan to provide for her children the donor uses a method which she thinks is best calculated to save death taxes the conveyance is not thereby conclusively stamped as "in contemplation of death." The desire to avoid estate taxes may be just as clearly present in the mind of a young and vigorous donor who thinks of death as far distant as in that of one who is old and feeble and who looks momentarily for its coming. Standing alone it cannot be deemed conclusive of a mental state such as is contemplated by the statutory phrase "contemplation of death."

But the same court later affirmed, per curiam, a decision in which the district court had said:

---

* In Galt v. Commissioner, 216 F.2d 41 (7th Cir. 1954), the court quotes a letter written by the taxpayer to his sons on giving them certain interests in sums to become due under a lease. One paragraph of the letter reads as follows: "I am now in my sixties and never felt better or was in better health in my life than I am at this date, and as I come from a long lived family — my father having died at about ninety-two, I fully expect to live during the entire life of the lease [20 years], and share with you the fullest association of our mutual company." — Ed.

> On these facts, we can draw no other conclusion than that the transfer was made with intention that these properties should not be liable for Federal estate tax. If that is so, naturally the transfer must have been made in contemplation of death. [Commonwealth Trust Co. v. Driscoll, 50 F. Supp. 949, 951, aff'd, 137 F.2d 653 (3d Cir. 1943), cert. denied, 321 U.S. 764 (1944).]

In Allen v. Trust Co. of Georgia, 326 U.S. 630 (1946), the Supreme Court affirmed a judgment in a case in which the district court had held that a release of a power to amend certain trusts was not in contemplation of death, even though the only reason for the release was to avoid the federal estate tax. The decedent had created two spendthrift trusts during his lifetime for the benefit of his children. Because they had suffered financial reverses and were heavily in debt, he intended to insulate the trust property against any tax or other claims that might arise. He retained a power to amend the trusts with the consent of the trustee and beneficiaries, believing that the retention of such a power would not require the property to be included in his gross estate. In 1935, however, the Supreme Court held in the *City Bank Farmers Trust Co.* case (infra p. 1158) that the reservation of such a power did bring trust property into the gross estate; and in 1937, to avoid this result, the decedent released his power to amend the trusts. The government argued that the property must be included in the gross estate because the release was motivated solely by an intent to avoid the estate tax,* but the Supreme Court said:

> But that is to isolate the release from all that preceded and to treat it as a wholly independent transaction. This is not a case where a settlor, having made one plan for the disposition of his property, later makes a different one to avoid death taxes. Mr. Spalding, in making the release, did what he originally intended to do — to make complete and absolute gifts to his children, freed of all claims, including taxes. Retention of the power to amend would have brought the trust property into Mr. Spalding's estate and subjected it to the estate tax lien. His purpose to take care of his children, come what may, might thus have been thwarted or impaired. He guessed wrong on the law, when he retained the power to amend. When he rectified the error, he was in good faith, endeavoring to complete his original project, not to give his children more than he at first intended in order to save taxes. What he did in 1937 was merely to accomplish by an additional step what he assumed he had already done. . . . On these facts, his desire to avoid death taxes does no more than establish that he did not want his plan to underwrite the necessities of his children and grandchildren jeopardized. His desire to make adequate provision for them remained the dominant motive, or so the triers of fact could properly find. [326 U.S. at 636-637.]

Note that the decedent's original purpose "to take care of his children, come what may" could have been jeopardized only if the estate tax could not have been paid out of the rest of his property. If the purpose of the *original* transfer had been to protect his children against estate tax and other claims, would the later transfer be in contemplation of death? See McIntosh's Estate v. Commissioner, 248 F.2d 181 (2d Cir. 1957) (*Trust Co. of Georgia* case not applied where earlier transfer was itself intended to avoid estate tax); Wardwell's Estate v. Commissioner, ¶61,295 Memo T.C. (applying *Trust Co. of Georgia* case).

Does the *Trust Co. of Georgia* case imply that a desire to avoid estate tax is a "death" motive even though the transferor is in perfect health and has no more than "that general expectation of death such as all persons entertain" which according to Regs. §20.-2035-1(c) is not encompassed by the statutory phrase "contemplation of death"?

2. *Relation of transfer to testamentary plan.* The *Johnson* case refers to "the existence of a general testamentary scheme of which the transfers were a part" as indicative of a gift in contemplation of death. What does this do to the process of "estate planning"? See Davidson's Estate v. Commissioner, 158 F.2d 239 (10th Cir. 1946) (gifts in

* If property would be included in the gross estate because the decedent retained a power to amend the provisions of the trust, it must also be included if the decedent relinquished such a power in contemplation of death. §2038(a)(1) and (2).

trust contemporaneous with execution of will; held, "integrated parts of a single plan, testamentary in nature"); Purvin v. Commissioner, 96 F.2d 929 (7th Cir. 1938), cert. denied, 305 U.S. 626 (reference in will explaining that no bequests were made to certain persons because testator had "already made provision for them in another manner during his lifetime"; held, evidence that the earlier transfers were part of a comprehensive testamentary plan). See Cleary, Protecting the Family Through Estate Planning, 25 Taxes 543, 551 (1947):

> Decisions such as this [Davidson's Estate v. Commissioner, supra] indicate the danger of a holding that inter-vivos transfers are made in contemplation of death where an intelligent over-all plan, carefully worked out, involves both inter-vivos transfers and testamentary dispositions and correlates the two in any way.
>
> The situation makes effective estate planning difficult. It is hardly possible for the parties to close their eyes to the estate tax consequences of inter-vivos gifts. It seems impracticable, if not blameworthy, to refrain from calling to the client's attention these highly important tax factors. Well-advised counsel cannot discuss estate planning problems without mentioning the possibility that transfers may be held to be made in contemplation of death. Suppression or concealment of computations, correspondence, or advice, certainly is not a satisfactory solution.
>
> Yet, as a practical matter, we know that people must plan. As the Supreme Court recognized in the *Trust Company of Georgia* case, one cannot fail to know that if he gives away property in his lifetime, he at least will not be the owner of that property at the time of his death. We also know that, by and large, the government has had rather hard going in the contemplation-of-death case, notwithstanding the language in the cases.
>
> The objective of sound estate planning, therefore, must be to make inter-vivos transfers primarily for motives associated with life, and to keep such records of the decedent's motives that it can be proved that the dominant motive for the transfer was associated with life. Furthermore, in the correspondence and computations care should be taken to emphasize the income tax savings and the motives associated with life. The uncertainties as to the possible estate tax savings should be specifically pointed out — for example, the discount factor, the possible early death of the donee, the possible depreciation in the value of the property during the donor's life, the possibility of reductions in rates, etc. There is, I think, a tendency to overstate and emphasize improperly the potential estate tax savings, a tendency which certainly should be avoided.

3. *Transfers animated by mixed motives.* In Farmers' Loan & Trust Co. v. Bowers, 98 F.2d 794 (2d Cir. 1938), cert. denied, 306 U.S. 648, the government showed that William Waldorf Astor made a transfer in England in 1919 that was motivated in part by a desire to avoid United States income and estate taxes and in part by a fear that England, where he lived, would enact a capital levy. Avoidance of the federal estate tax was a substantial motive for the transfer, but it may not have been the dominant motive, and the taxpayer argued that the trial judge committed error in charging the jury that if "the motive of avoiding the estate tax played a substantial part in causing Astor to make the transfers, the transfers must be held to have been made in contemplation of death." The Court of Appeals held that the charge was correct. After quoting extensively from the *Wells* case, the court said:

> While the Supreme Court may have intended to lay down the rule that even a substantial death motive would not bring a case within the statute if the dominant motive was to relieve the settlor of care, to give his children experience in managing their own affairs, to settle property upon them during his lifetime, or to carry out some other beneficent purpose, we do not think such a rule extends to a situation where a substantial motive to avoid estate taxes is accompanied by motives to escape other kinds of taxation. These remaining motives, though lawful, can hardly be regarded as reasons for engrafting exceptions upon a statute taxing transfers made in contemplation of death generally. These motives differ greatly from the beneficent purposes listed in the *Wells* case and are neither included in the statute as grounds of exception, nor made such under any decision. [98 F.2d at 798.]

Before the *Astor* case was decided, the Regulations had provided that "the more compelling motive controls" if the transfer results from mixed motives. Regs. 80, Art. 60. The Regulations were then changed to provide, as now, that a transfer is reached by §2035 if it is "prompted by the thought of death (although it need not be solely so prompted)." Regs. §20.2035-1(c).

4. *Transfers of non-productive property.* Another factor that may lead to the conclusion that a gift was made in contemplation of death is that no income will be produced by the transferred property before the transferor dies. See Reeves' Estate v. Commissioner, 180 F.2d 829 (2d Cir. 1950), involving a transfer of corporate stock on which no dividends were paid until the transferor's death, although the corporation's earnings were substantial: "From this fact, and from decedent's always powerful, if not always mathematically controlling interest in the corporation, the commissioner inferred an intent not to pay dividends so long as decedent managed the affairs of the corporation." The Tax Court's holding that the gift was made in contemplation of death was affirmed, since "the record is bare of any explanation which makes the Commissioner's position seem unreasonable." The suggestion that a transfer of non-income-producing property is necessarily in contemplation of death, at least if the transferee is unable to sell the property and invest the proceeds in income-producing property, apparently derives from cases dealing with transfers of life insurance policies. Infra page 1249.

5. *Credit for gift tax paid.* An inter vivos transfer is subject to the federal gift tax even though the value of the transferred property is later included in the donor's gross estate as a transfer in contemplation of death. The gift tax paid on the transfer will ordinarily be credited against the estate tax, however, as though it were a down payment on the estate tax liability, although in some instances the credit — because of changes in value between the time of the gift and the date of death, or because the gift tax rate is higher than the applicable estate tax rate — will not equal the full amount of the "down payment." The gift tax credit is examined infra page 1330.

Because the gift tax paid by the donor, as distinguished from the gift itself, is not added back to the gross estate, the total transfer tax burden may often be reduced by a lifetime gift even though it is certain to be thrown back into the gross estate under §2035. To illustrate this principle by a dramatic example, assume that A's entire fortune consists of $10 million, and that he makes an inter vivos gift of $7.1 million. The gift tax (assuming no prior taxable gifts) will be about $2.9 million, which will exhaust the balance of A's original $10 million. If the transfer is a gift in contemplation of death, A's gross estate will be $7.1 million, on which the estate tax will be about $3.9 million, less a gift tax credit of $2.9 million, leaving a balance due of $1 million. There being no probate assets in A's estate, the tax will be collectible out of the donated property. Thus, A's donees will be left with $6.1 million after taxes. (If A survives for more than three years after making the gift, §2035(b) will protect the donees against having the gift included in the gross estate, with the result that there will be no estate tax and the donees will retain their $7.1 million free and clear.) By contrast, had A retained the property until his death, the federal estate tax would have been about $6 million, leaving $4 million for the heirs.

Note how, in the example just described, the amount paid by A as federal gift tax is excluded in computing the amount of the inter vivos gift as well as in computing his gross estate.

6. *Executor's duty to report transfers.* In addition to requiring the executor to report any transfers by the decedent that are includible in the gross estate, the estate tax return (Form 706, Schedule G) asks whether "the decedent, within 3 years immediately preceding his death, [made] any transfer of his property without an adequate and full consideration in money or money's worth." How full an investigation must the executor make before answering this question? The return goes on to ask for the details of any such transfer of $1000 or more May the executor properly search only for transfers of this size?

7. *Income tax aspects of gifts in contemplation of death.* As already noted (supra p. 1074), the income tax basis of inherited property is its value as of the decedent's death (or on the optional valuation date if that is used, infra p. 1335). Before 1954, this rule was not applicable to gifts in contemplation of death, since the applicable provision

(§113(a)(5) of the 1939 Code) was limited to property "acquired by bequest, devise, or inheritance." But §1014 of the 1954 Code greatly expands the categories of property whose basis shifts at death, including gifts in contemplation of death. If the donated property is sold *before* the donor's death, however, its income tax basis is prescribed by §1015 (donor's basis); so that the donee's income tax may be substantially affected by his timing. If he sells shortly after the decedent's death, moreover, he may not know until months or years later whether his income tax basis should be determined under §1014(b)(9) or under §1015. If a transfer was not taxed to the estate as a gift in contemplation of death, may the donee (perhaps many years later) assert that it should have been included in the gross estate and that he is entitled to a stepped-up income tax basis for the property?

A conflict of interest between the estate and the donee may arise if the government asserts that a transfer was made in contemplation of death, since the estate tax burden on the estate may be less than the income tax savings that the donee would derive from a stepped-up basis.

In Rev. Rul. 59-86, 1959-1 C.B. 209, the Internal Revenue Service held that the holding period of a capital asset received by gift begins on the date of gift, even though the property is later included in the donor's estate as a gift in contemplation of death so that its basis to the donee is governed by §1014.

8. *Proposals for legislative changes in §2035.* The model estate tax statute drafted for the American Law Institute (Tent. Draft No. 9) proposes that the present statutory scheme be continued with the period lengthened to 5 years or, as an alternative, that all gifts within 3 years of death be subjected to estate tax. The latter proposal assumes that Heiner v. Donnan, supra page 1121, would either not be followed today or would be distinguished because the proposal does not use the language of presumption. See the *Bullard* case, infra page 1180. Among many other proposals for legislative action in this area are those by Paul, Hearings, House Ways and Means Committee, 77th Cong., 2d Sess. 91 (conclusive presumption for transfers within 2 years of death by person over 65, if in excess of some specified sum); Lowndes and Rutledge, infra (transfer includible if a reasonable man in decedent's position "would have realized that he had no substantial life expectancy"); Pavenstedt, infra (repeal proposed; or 2-year conclusive presumption applicable to persons over a specified age).

Rev. 134 (1945); Pavenstedt, Taxation of Transfers in Contemplation of Death: A Proposal for Abolition, 54 Yale L.J. 70 (1944); Atlas, Gifts in Contemplation of Death, 23 Taxes 421 (1945).

FRIZZELL'S ESTATE v. COMMISSIONER
9 T.C. 979 (1947)

[The decedent created an irrevocable trust in 1937 for the benefit of his son by transferring 1132 shares of common stock of the Coca-Cola Company to the Trust Company of Georgia. He died in 1940. In an omitted part of the opinion, the court held that the trust was created in contemplation of death.]

HARRON, Judge: . . .

Issue 2. — Upon the holding that the decedent created the trust for his son in contemplation of death and as a substitute for a testamentary disposition, a second question arises, which relates to the measure of the resulting estate tax. That is to say, the problem is to determine the value of "property" to be included in the gross estate for purpose of measuring the estate tax. Respondent included the value of the trust corpus at the date of death, which consisted of the original corpus, the gift stock of the Coca-Cola Co., plus increases in the corpus resulting from investment of undistributed income, and cash not yet invested. The petitioners contend that the value of only part of the trust is includible in the gross estate, namely, the value of the Coca-Cola stock. The amount of the difference

in value involved in the respective contentions of the parties is about $11,228.

The question presented is one of first impression, relating as it does to a transfer in trust which was made in contemplation of death but was completed in every respect when the inter vivos transfer was made, and was not one in which the decedent retained any interests in the property transferred. In the *Igleheart* case [77 F.2d 704], it appeared in the findings of fact made by the Board of Tax Appeals that reinvestments of trust corpus had been made by the trustee between the date of transfer and the date of death, but that fact was not discussed by the Circuit Court in Igleheart v. Commissioner, supra, and, although the Circuit Court sustained the Board's holding that the value of all of the assets of the trust at the date of death should be included in the gross estate, there was no issue raised, as is raised here, on the point that the value of the trust assets to be included in the gross estate should be limited to the value at the date of death of the property transferred in trust by the grantor, the decedent. Also, in this case, the question does not relate to reinvestments by the trustee of proceeds from the original property transferred by the grantor-decedent to a trust in contemplation of death, nor to accretions to the very property which the grantor-decedent transferred to the trust during his lifetime. We are unable to find, and neither party has cited, any authority which has considered the precise question presented in this case. Petitioners cite no authorities to support their contention and confine their argument on brief to reliance upon the literal wording of [§2035].

Under the holding in issue 1, the shares of Coca-Cola stock are property to be included in the gross estate for computing the tax upon the estate. Except for petitioners' position under issue 1, as it carries over to this issue, there is no real dispute with respect to this conclusion. Thus the question which is in dispute relates primarily to the other property which made up the trust corpus at the date of death, and the question is whether such other property is includible in the gross estate under the holding that the transfer in trust at the time the trust was created was made in contemplation of death under [§2035]. . . .

The trust instrument under which this trust was created did not evidence any retention of interest in the decedent from which it could be held that his death operated to end any probabilities or contingencies upon the happening of which any interests in any of the property of the trust would become certain. This trust is distinguishable from the trusts in the cases of Fidelity-Philadelphia Trust Co. v. Rothensies, 324 U.S. 108, and Commissioner v. Field, 324 U.S. 113, where it was held that "the retention of such a string . . . , subjected the value of the entire corpus to estate tax liability." Fidelity-Philadelphia Trust Co. v. Rothensies, supra. Here, the gift of the decedent to the trust was completed in every respect during his lifetime and was not affected by his death. Only the testamentary character of the motive of the decedent in making the gift sweeps it into his estate under [§2035] relating to transfers made in contemplation of death. The phrase "in contemplation of death," used in the statute, which governs the present case, "embraces gifts inter vivos, despite the fact that they are fully executed, are irrevocable and indefeasible." United States v. Wells [supra p. 1122]. But we do not perceive that the motive, contemplation of death, of the gift in trust of one property sweeps into the gross estate other property which is found in the trust at the date of death which is derived from the operation of the trustee, independently of the grantor, in his discretionary accumulation of income and the investment thereof in new property.

The estate tax is a tax on a transfer; it is not a tax on property. United States Trust Co. of New York v. Helvering, 307 U.S. 57; Chase National Bank v. United States, 278 U.S. 327, 334; Central Hanover Bank Co. v. Kelly, 319 U.S. 94; Milliken v. United States, 283 U.S. 15, 20, 22, 23. Although in the instance of prop-

erty transferred in contemplation of death all interests have been completely determined upon the making of the inter vivos transfer and the property does not technically pass at death, the statute, for purposes of the estate tax, puts the property transferred in contemplation of death in "the same category as it would have been if the transfer had not been made and the transferred property had continued to be owned by the decedent up to the time of his death." Igleheart v. Commissioner, supra. It was stated in Helvering v. Hallock, 309 U.S. 106: "Section 302(c) [Revenue Act of 1926, applying both to transfers in contemplation of death and to transfers taking effect at death] deals with property technically passing at death but with interests theretofore created. *The taxable event is the transfer inter vivos. But the measure of the tax is the value of the transferred property at the time when death brings it into enjoyment.*" (Italics supplied.) This rule is, in our opinion, the decisive consideration in the question before us. Value at the time of death provides the measure of the tax, but the tax is upon a transfer of property. Helvering v. Hallock, supra. Therefore, we think that where *transfer* of property has been completed during life and the death of the grantor does not operate upon the completion of the transfer, the estate tax is measured by the value of the property which the decedent transferred to a trust, only, and the tax is not measured by other property in the trust when death occurs. The fact that transfers are made in *trust* may constitute one common element in both a transfer in contemplation of death and a transfer taking effect at death. In both, a trust holds property at the time of death which is to provide the measure of the estate tax, but the differences in law between the two classes of transfers dictate the differences in the measure of the tax. Perceiving this to be the underlying distinction . . . for purposes of determining gross estate, it follows here that the "property" to be included in decedent's gross estate is only the value at the date of death of the Coca-Cola stock of which the decedent made transfer during his life, rather than the value of the entire trust corpus, as respondent has determined.

The conclusion above reached is not in conflict with the holding in Estate of Daniel Guggenheim, 40 B.T.A. 181, 182, 183 (modified and affirmed, 117 Fed. (2d) 499; certiorari denied, 314 U.S. 621). In the *Guggenheim* case the entire trust corpus was included in the decedent's gross estate because of the reserved powers retained up to the time of his death, a different situation than we have here, where the decedent retained no interest in nor control over the property which he transferred in trust. . . .

It is held that there should be included in the gross estate under [§2035] only the value of the shares of Coca-Cola stock which the decedent transferred to the trust, and that respondent erred in including in the gross estate the value of other property in the trust at the date of death which the trustee acquired after the trust was created out of his accumulations of trust income.

Reviewed by the Court.

NOTE

1. *Other trust cases.* The *Frizzell* case was affirmed, sub nom. Burns v. Commissioner, 177 F.2d 729, 741 (5th Cir. 1949), the court saying:

> We further sustain the holding of the Tax Court on the cross-petition that only the value of the Coca-Cola stock transferred was properly includible in decedent's gross estate, and not the value of the other securities and property acquired from accumulations of trust income comprising a part of the trust corpus at his death. The tax statute in question should be strictly construed in favor of the taxpayer, and since it does not expressly provide for the inclusion of income derived from the

transferred property in the gross estate, it is not our prerogative, by judicial fiat, to give it that effect.

In the *Igleheart* case, cited by the Tax Court in *Frizzell,* the rationale for including the value of the corpus of the trust at the date of death, rather than its value at the time of the gift, was expressed as follows:

> For the purposes of the tax, property transferred by the decedent in contemplation of death is in the same category as it would have been if the transfer had not been made and the transferred property had continued to be owned by the decedent up to the time of his death. [77 F.2d 704, 711.]

See also McGehee v. Commissioner, 260 F.2d 818 (5th Cir. 1958) (stock dividends paid out of post-gift income not includible); Comment, Estate Tax Includibility of Stock Dividends on Shares Transferred in Contemplation of Death, 25 U. of Chi. L. Rev. 372 (1958).

2. *Non-trust transfers.* In Humphrey's Estate v. Commissioner, 162 F.2d 1 (5th Cir. 1947), cert. denied, 332 U.S. 817 (1947), the court held that a gift of cash in contemplation of death was includible in the donor's estate at its full amount even though part of it was lost by the donee in a business venture before the donor's death:

> The evident purpose is to make the transferred property cause the same tax result as if the decedent had kept it till he died instead of transferring it. We do not accede to the argument that if the transferee injures or makes away with it, it shall be considered that he has acted as the agent of the decedent, or that he may substitute it by other property of less value. What is to be valued at the time of decedent's death is the very property which the decedent transferred. [162 F.2d at 2.]

What if the funds had been given to the donee on an understanding that they would be invested in the venture that turned out to be a failure? If the gift consists of securities, and the donee sells them before the donor's death, is the includible amount their value at the time of the gift, the sales price, the value of equivalent securities at the donor's death, the value of any reinvestments made by the donee, or some other amount?

SULLIVAN'S ESTATE v. COMMISSIONER
175 F.2d 657 (9th Cir. 1949)

Before DENMAN, Chief Judge, and STEPHENS and ORR, Circuit Judges.

DENMAN, Chief Judge:

This is a petition to review a decision of the Tax Court which upheld the Commissioner's determination of deficiencies in the petitioner's estate tax return. Two questions are presented for review: (A) Is the amount of a gift by two joint tenants, husband and wife, to their son, in contemplation of the husband's death, includible in its entirety in the husband's gross estate under [§2035]. (B) Where two joint tenants agree to terminate a joint tenancy and henceforth hold the property as tenants in common and transfer each to the other the interest held by each, and this is done in contemplation of death of the decedent, is the entire amount of the property to be included in the gross estate of the deceased joint tenant under [§2035].

All property of decedent and his wife had been held in joint tenancy except for one small parcel of realty held in decedent's name alone. The gift to the son of the wife's and husband's interest in the joint tenancy was made when decedent was 77 years old and suffering from an ailment which caused his death within two months after the gift was made. The termination of the joint tenancy was accomplished by the contract between the spouses a few days later, and at the same time the revision of the wills of decedent and his wife was discussed. A week later new wills were executed by decedent and his wife. This evidence supports the finding

that both the gift to the son and the termination of the joint tenancy were joined in by decedent in contemplation of his death. . . .

A. The Tax Court erred in including the entire joint estate in the gift to the son because, under the California law, he could transfer only a half interest therein.

It has long been established that what constitutes an interest in property held by a person within a state is a matter of state law. Fernandez v. Wiener, 326 U.S. 340, 355-357, determining by Louisiana law what is transferred of community property on the death of the husband and the shiftings of interest between the two spouses. Moffitt v. Kelly, 218 U.S. 400.

One of the factors in an owner's interest in property is the owner's power to transfer it. Congress has the power to impose an excise tax on the transfer when made, but has not enacted any law taxing gifts which determines the quantum of the transfer and thereby makes the state law not controlling.

Under the law of California, one joint tenant cannot dispose of anything more than his own interest in the jointly held property. People v. Marshall, 8 Cal. 51; Oberwise v. Poulos, 124 Cal. App. 247, 12 P.2d 156. "During the lives of the tenants, the rules regulating the transfer of their interests are substantially the same, whether they hold in joint tenancy or in common. Neither a joint tenant nor a tenant in common can do any act to the prejudice of his co-tenants in their estate." Stark v. Barrett, 15 Cal. 361, 368. Where a joint tenant has purported to convey more than his interest, his transferee is held to have taken only the interest that could be transferred, i.e., the transferor's share. Stark v. Barrett, supra; Swartzbaugh v. Sampson, 11 Cal. App. 2d 451, 54 P.2d 73.

It is obvious that the half interest conveyed by the wife was not in contemplation of death. She is still living.

The decision of the Tax Court is reversed on the issue of the gift to the son.

B. The Tax Court erred in holding that, although the joint tenancy was terminated by the contract of decedent and his wife prior to his death, it is taxable under [§2035] and [§2040] of the Internal Revenue Code.

Section [2035]. The pertinent portions of the contract are:

"Now, therefore, it is agreed as follows:

"First: That from and after this date all of the real and personal property owned by the parties hereto, whether presently held in joint tenancy or presently owned by either of the parties hereto in his or her own name, shall be owned by each of the parties as follows:

"An undivided one-half interest therein shall be the separate property of Frank K. Sullivan, and Hattie B. Sullivan hereby assigns and transfers to Frank K. Sullivan all of her right, title and interest in and to an undivided one-half interest in the same.

"An undivided one-half interest therein shall be the separate property of Hattie B. Sullivan, and Frank K. Sullivan hereby assigns and transfers to Hattie B. Sullivan all of his right, title and interest in and to an undivided one-half interest in the same."

This contract between the spouses either ipso facto terminated the joint estate of the spouses, cf. McDonald v. Morley, 15 Cal. 2d 409, 101 P.2d 690, or it was terminated by the stated transfers inter se of the interests of each of the spouses.

If the contract ipso facto terminated the joint tenancy, without the transfer inter se, it is not taxable under [§2035], which covers only "Transfers in contemplation of . . . death." If, on the other hand, the contract be construed to involve a transfer, it was a bona fide transfer for money's worth because the younger wife's joint interest transferred to the older husband is worth at least as much as the husband's interest transferred to her.

The Commissioner contends that the sale was not "bona fide" because made in contemplation of death. The wording of the statute shows the contrary, the pertinent portions reading:

> (a) Decedent's Interest. — To the extent of the interest therein of the decedent at the time of his death; . . .
>
> (c) Transfers in contemplation of, or taking effect at death. — To the extent of any interest therein of which the decedent has at any time made a transfer, by trust or otherwise, in contemplation of or intended to take effect in possession or enjoyment at or after his death, . . . except in case of a bona fide sale for an adequate and full consideration in money or money's worth.*

The Commissioner also contends that it was not bona fide because the negotiations between the spouses were not at "arms' length." There is no evidence to support such a contention. The actual contract is such a fair one to each, that it is of the sort which would be the result of arms' length bargaining.

The Commissioner also contends that under [§2035] any transfer in contemplation of death is taxable because it, to that extent, reduces the decedent's estate at his death. The face of the section shows the contrary and the Supreme Court has so held. There was no compulsion on the co-tenants to continue the joint tenancy so that this taxable event would occur. "The legal right of a taxpayer to decrease the amount of what otherwise would be his taxes, or altogether avoid them, by means which the law permits cannot be doubted." Gregory v. Helvering, 293 U.S. 465, 469. "A taxpayer may arrange his business transactions so they may or may not be taxable under the phraseology of the taxing act." Pacific Southwest Realty Co. v. Commissioner, 9 Cir., 128 F.2d 815, 818.

The Tax Court and the Commissioner rely on the cases of Igleheart v. Commissioner, 5 Cir., 77 F.2d 704; In re Kroger's Estate, 6 Cir., 145 F.2d 901; Estate of Hornor, 44 B.T.A. 1136 and Estate of Koussevitsky, 5 T.C. 650, as authority for the inclusion in decedent's gross estate of any joint property owned prior to decedent's death and transferred in contemplation of death. The factual situations presented in those cases do not resemble the instant case. No one concerned a bona fide transfer for money's worth under [§2035].

Section [2040]. This is a provision not in any way concerned with transfers in contemplation of death, that element of the estate tax statute being disposed of in [§2035]. . . .

As seen above, the joint tenancy was terminated before the husband's death. Hence, as to the joint tenancy, the deceased had no "interest therein . . . at the time of his death."

As stated in United States v. Jacobs, 306 U.S. 363, in considering [§2040] . . . "Congress has the power to levy a tax upon the occasion of a joint tenant's acquiring the status of survivor at the death of a co-tenant," and 306 U.S. at page 371, "Until the death of her co-tenant, the wife could have severed the joint tenancy and thus have escaped the application of the estate tax of which she complains . . ."

The Commissioner agrees that [§2040] has no application, adding respecting the Tax Court's finding "Obviously, that finding is one which is solely designed to bring both the gift and the contract within the contemplation of death provisions of [§2035]. By contrast, there is no finding either circumstantial or otherwise which would justify the inclusion of the value of the property in the decedent's gross estate under [§2040], so that on its face the taxpayer's contention does violence to the Tax Court's findings and its decision which is based thereon."

* These provisions are §811(a) and §811(c) (in part) of the 1939 Code, corresponding to §2033 and §2035 of the 1954 Code. — ED.

The decision of the Tax Court is reversed as to the issue of inclusion in the estate tax of the wife's separate property, and the case remanded to the Tax Court for its further adjudication in accord with this opinion.

Reversed.

STEPHENS, Circuit Judge, did not participate in the decision of this case.

NOTE

1. *Transfer of jointly held property in contemplation of death.* The court states that the decedent had no "interest . . . at the time of his death" in the property that had previously been held in joint tenancy. Does §2040 require that the joint tenancy exist at the time of the decedent's death? The phrase "interest . . . at the time of his death" appears in §2033 (formerly §811(a) of the 1939 Code), not in §2040 (§811(e) of the 1939 Code). The Regulations, however, refer to property "held jointly at the time of the decedent's death." Regs §20.2040-1(a).

What would have been the result in *Sullivan* if the surviving spouse was the economic source of the entire property? Nothing would have been included in the husband's estate under §2040 if the joint tenancy had continued, but would the conveyance be treated as a transfer in contemplation of death of his interest in the property?

For other problems in this area, see page 1192 infra.

2. *Conversion of community property into separate property.* In Rickenberg v. Commissioner, 177 F.2d 114 (9th Cir. 1949), cert. denied, 338 U.S. 949 (1950), it was held that an agreement between husband and wife converting their community property into a tenancy in common did not constitute a "transfer" by him within the meaning of §2035 because each spouse had a one-half interest in the community property before the conversion, so that the government's allegation that the agreement was made in contemplation of death was immaterial. (Had it not been for the agreement, all of the community property would have been included in the estate of the husband, under the 1942-1948 "economic source" rule (supra p. 1107); and the government sought to achieve the same result by disregarding the agreement as a transfer in contemplation of death.) By the same agreement, they converted certain so-called "pre-1927 California community property" into a tenancy in common; because this species of community property is, for reasons peculiar to California law, treated as separate property of the husband for federal tax purposes, the agreement was held by the court to constitute a transfer by the husband to the wife of a one-half interest in the property, and the transfer was found to be in contemplation of death because it was made "solely in order to minimize estate taxes in the event the husband died first."

3. *References.* Wright, Transfers of Joint Property in Contemplation of Death, 55 Mich. L. Rev. 1 (1956); Note, Joint Tenancy and Estate Tax Avoidance: A Widening Loophole for Transfers in Contemplation of Death, 66 Yale L.J. 142 (1956).

SECTION B. REVOCABLE TRANSFERS: §2038

From 1916 to 1924, the estate tax statute did not refer specifically to revocable transfers, but they were includible in the gross estate by virtue of a clause reaching any transfer by trust or otherwise "intended to take effect in possession or enjoyment at or after death." Moreover, it was held that revocable transfers made before 1916 could be reached, if the transferor died after 1916; the claim that to include such property in the gross estate was retroactive legislation in violation of the due process clause of the Fifth Amendment was rejected on the ground that the transfer was not complete until the transferor's death and that the tax was imposed on the shifting of economic benefits at death. Reinecke v. Northern Trust Co., 278 U.S. 339 (1929).

In 1924, the prototype of what is now §2038 was enacted, reaching transfers where enjoyment was subject at the date of the decedent's death "to any change through the exercise of a power, either by the decedent alone or in conjunction

with any person, to alter, amend, or revoke, or where the decedent relinquished any such power in contemplation of his death. . . ." This provision was changed from time to time after 1924, and took on its present form in 1936. Some of the post-1924 changes, as will be seen, were declaratory rather than substantive.

1. *Where Grantor's Power Is Unrestricted*

Over the years, the Internal Revenue Service has construed §2038 in an expansive manner and it has met with few setbacks along the way. In Porter v. Commissioner, 288 U.S. 436 (1933), the Supreme Court held that §2038 brought into the gross estate a trust over which the decedent had a nonbeneficial power to amend, i.e., a power to modify or alter the trust indenture in any manner except in favor of himself or his estate. The Court held that §2038 was intended by Congress to reach property in which the decedent had no "interest" of the type that would be subject to §2033, and that the terms "alter" and "amend" in §2038 were not used as synonyms for "revoke." The Court said:

> We need not consider whether every change, however slight or trivial, would be within the meaning of the clause. Here the donor retained until his death power enough to enable him to make a complete revision of all that he had done in respect of the creation of the trusts even to the extent of taking the property from the trustees and beneficiaries named and transferring it absolutely or in trust for the benefit of others. So far as concerns the tax here involved, there is no difference in principle between a transfer subject to such changes and one that is revocable. [288 U.S. at 443.]

The Court also rejected the argument that so construed, §2038 measured the decedent's tax by property belonging to others, in violation of the due process clause:

> [The taxpayers] treat as without significance the power the donor reserved unto himself alone and ground all their arguments upon the fact that deceased, prior to such enactment, completely divested himself of title without power of revocation. It is true that the power reserved was not absolute as in the transfer considered in Burnet v. Guggenheim [supra p. 1007], in which this court, in the absence of any provision corresponding to [§2038], held that the donor's termination of the power amounted to a transfer by gift within the meaning of §319 of the Revenue Act of 1924, 43 Stat. 313. But the reservation here may not be ignored, for, while subject to the specified limitation, it made the settlor dominant in respect of other dispositions of both corpus and income. His death terminated that control, ended the possibility of any change by him, and was, in respect of title to the property in question, the source of valuable assurance passing from the dead to the living. That is the event on which Congress based the inclusion of property so transferred in the gross estate as a step in the calculation to ascertain the amount of . . . the net estate. Thus was reached what it reasonably might deem a substitute for testamentary disposition. United States v. Wells [supra p. 1122]. There is no doubt as to the power of Congress so to do. [288 U.S. at 444.]

In Commissioner v. Chase National Bank, 82 F.2d 157 (2d Cir. 1936), cert. denied, 299 U.S. 552, §2038 was held applicable to an irrevocable trust created by the decedent during her lifetime, in 1920, under which the corpus and undistributed income would be paid on her death to her lawful descendants in such proportion as she should appoint by will, or in equal shares per stirpes in default of such an appointment:

> We think [§2038] authority for the inclusion of the trust corpus in the decedent's gross estate. Up to the time she died she had the power to alter the proportions in which her descendants should take the property in accordance with the original terms of the trust instrument. She could have limited any, or all but one, of them to a nominal amount and given all of real value to one or to such of them as she pleased.

Her death eliminated the possibility of any such change in the provisions of the deed of trust and made it certain that her lawful descendants would take the property in equal shares per stirpes. The power she reserved was not to change the trust provisions in a trivial way, but went right to the heart of them and gave the decedent a substantial though qualified control over the trust property until her death. Such a power to alter or amend the substance of the transfer by trust brought it within the scope of the decision in Porter v. Commissioner [supra p. 1144], and justified the inclusion of the property in the gross estate of the decedent. . . . The decedent, having the right to change the economic benefit, had the power to alter within [§2038] even though she could not benefit herself in a pecuniary way by the change. Witherbee v. Commissioner (C.C.A.) 70 F.(2d) 696. She lived several years after the act took effect and she was on notice of its provisions, retaining the reserved powers when she might have given them up to rid her estate of this tax liability. So there has been no denial of rights under the Fifth Amendment. [82 F.2d at 158.]

A further step was taken in Commissioner v. Estate of Holmes, 326 U.S. 480 (1946), where the decedent during his lifetime had created three irrevocable trusts, one for each of his sons. He retained for his lifetime the power to terminate each trust; if this power was exercised, the trust corpus and accumulated income would go to the son if living, otherwise to the son's surviving issue if any; if the son had no surviving issue, the property went to the other two sons or their surviving issue per stirpes, with ultimate gifts over. The Court held that the decedent had a power to "alter, amend, or revoke":

It seems obvious that one who has the power to terminate contingencies upon which the right of enjoyment is staked, so as to make certain that a beneficiary will have it who may never come into it if power is not exercised, has power which affects not only the time of enjoyment but also the person or persons who may enjoy the donation. More therefore is involved than mere acceleration of the time of enjoyment. The very right of enjoyment is affected, the difference dependent upon the grantor's power being between present substantial benefit and the mere prospect or possibility, even the probability, that one may have it at some uncertain future time or perhaps not at all. A donor who keeps so strong a hold over the actual and immediate enjoyment of what he put beyond his own power to retake has not divested himself of that degree of control which [§2038] requires in order to avoid the tax. [326 U.S. at 486-487.]

The Court also held that the trusts, which were created before 1936, were embraced by §2038(a)(2), even though that subsection does not include the term "terminate," which is found in §2038(a)(1); the addition of this term in 1936, the Court held, was intended by Congress as declaratory, rather than to change existing law.

LOBER v. UNITED STATES

346 U.S. 335 (1953)

Mr. Justice Black delivered the opinion of the Court.

This is an action for an estate tax refund brought by the executors of the estate of Morris Lober. In 1924 he signed an instrument conveying to himself as trustee money and stocks for the benefit of his young son. In 1929 he executed two other instruments, one, for the benefit of a daughter, the other for a second son. The terms of these three instruments were the same. Lober was to handle the funds, invest and reinvest them as he deemed proper. He could accumulate and reinvest the income with the same freedom until his children reached twenty-one years of age. When twenty-one they were to be paid the accumulated income. Lober could hold the principal of each trust until the beneficiary reached twenty-five. In case he died his wife was to be trustee with the same broad powers Lober had conveyed to himself. The trusts were declared to be irrevocable, and as the

case reaches us we may assume that the trust instruments gave Lober's children a "vested interest" under state law, so that if they had died after creation of the trusts their interests would have passed to their estates. A crucial term of the trust instruments was that Lober could at any time he saw fit turn all or any part of the principal of the trusts over to his children. Thus he could at will reduce the principal or pay it all to the beneficiaries, thereby terminating any trusteeship over it.

Lober died in 1942. By that time the trust property was valued at more than $125,000. The Internal Revenue Commissioner treated this as Lober's property and included it in his gross estate. That inclusion brought this lawsuit. The Commissioner relied on [§2038]. That section, so far as material here, required inclusion in a decedent's gross estate of the value of all property that the decedent had previously transferred by trust "where the enjoyment thereof was subject at the date of his death to any change through the exercise of a power . . . to alter, amend, or revoke. . . ." In Commissioner v. Holmes, 326 U.S. 480, we held that power to terminate was the equivalent of power to "alter, amend, or revoke" it, and we approved taxation of the Holmes estate on that basis. Relying on the *Holmes* case, the Court of Claims upheld inclusion of these trust properties in Lober's estate. 124 Ct. Cl. 44, 108 F. Supp. 731. This was done despite the assumption that the trust conveyances gave the Lober children an indefeasible "vested interest" in the properties conveyed. The Fifth Circuit Court of Appeals had reached a contrary result where the circumstances were substantially the same, in Hays' Estate v. Commissioner, 181 F.2d 169, 172-174. Because of this conflict, we granted certiorari. 345 U.S. 969.

Petitioners stress a factual difference between this and the *Holmes* case. The *Holmes* trust instrument provided that if a beneficiary died before expiration of the trust his children succeeded to his interest, but if he died without children, his interest would pass to his brothers or their children. Thus the trustee had power to eliminate a contingency that might have prevented passage of a beneficiary's interest to his heirs. Here we assume that upon death of the Lober beneficiaries their part in the trust estate would, under New York law, pass to their heirs. But we cannot agree that this difference should change the *Holmes* result.

We pointed out in the *Holmes* case that [§2038] was more concerned with "present economic benefit" than with "technical vesting of title or estates." And the Lober beneficiaries, like the Holmes beneficiaries, were granted no "present right to immediate enjoyment of either income or principal." The trust instrument here gave none of Lober's children full "enjoyment" of the trust property, whether it "vested" in them or not. To get this full enjoyment they had to wait until they reached the age of twenty-five unless their father sooner gave them the money and stocks by terminating the trust under the power of change he kept to the very date of his death. This father could have given property to his children without reserving in himself any power to change the terms as to the date his gift would be wholly effective, but he did not. What we said in the *Holmes* case fits this situation too: "A donor who keeps so strong a hold over the actual and immediate enjoyment of what he puts beyond his own power to retake has not divested himself of that degree of control which [§2038] requires in order to avoid the tax." Commissioner v. Holmes, supra, at 487.

Affirmed.

MR. JUSTICE DOUGLAS and MR. JUSTICE JACKSON dissent.

COMMISSIONER v. HAGER'S ESTATE

173 F.2d 613 (3d Cir. 1949)

Before GOODRICH, MCLAUGHLIN and KALODNER, Circuit Judges.

GOODRICH, Circuit Judge.

This case involves the liability of the estate of William M. Hager for asserted estate taxes under [§2038(a)(2)]. The Tax Court decided in favor of the taxpayer and the Commissioner's appeal has asked reversal. . . .

The question which we must decide is whether under the provisions of the trusts presently to be described the enjoyment was subject to change at the date of the grantor's death "through the exercise of a power . . . to alter, amend or revoke. . . ." If it was, the Tax Court was wrong and the Commissioner is entitled to the tax claimed.

The five trusts in question were set up in 1924. The decedent and his wife each contributed one half of the original corpus in certain shares of corporate stock. The children and grandchildren named as beneficiaries were given life estates together with powers to appoint the remainders by will. There were gifts over in default of appointment. The trusts were irrevocable and the trustee retained no power to terminate them prior to the designated period for their expiration, which was the death of the grantor's son.

The decedent was named trustee under all the trusts, and they were administered as a unit. He retained very wide powers, it quite evidently being the intention to set up the type of trust in which he hoped by the exercise of business judgment to enlarge the trust estate for members of his family. In particular, he was authorized, by paragraph 5 of each trust indenture, to determine, as it pleased him, whether gains realized from the sale of securities in the trusts should be treated as income or retained as part of the corpus.[1] By paragraph 8 he could pay out or accumulate income at his sole discretion, and could treat the accumulations as corpus or income.[2] The Commissioner relies upon these paragraphs to show that the decedent, when he died, had in his hands the power to alter or amend.

The corpus of the estate increased in value and at the time of the decedent's death was considerably greater in dollar value than it was on the date created. The Commissioner, by stipulation, is claiming only half of the total value of the trusts. In other words, he is not claiming estate tax on the portion contributed to the trusts by Mrs. Hager, the decedent's wife, and the increment on that portion.

Except in one particular, Commissioner v. Holmes' Estate [supra p. 1145] is pre-

[1] "(5) As between the beneficiary of this trust and those entitled to the remainder hereunder, any increment, however accruing, to the value of any investment constituting a part of the principal of the trust shall be for the benefit of those entitled to the remainder except that if any such security, to the value of which there shall be any increment, by way of increase of market price or otherwise, shall be sold or otherwise disposed of during the period of the trust, such increment, in the discretion of the Trustee, may be either treated as income to be disposed of in accordance with the terms hereof, or be retained as a part of the corpus of the trust."

[2] "(8) The Trustee may from time to time pay over to our said son, or expend for his benefit, so much of the income from the trust estate as in the sole judgment of the Trustee it shall be advisable so to do. So much of such income as shall not be so paid or expended shall be accumulated as a part of the trust estate, but at any time and from time to time after there has been any such accumulation of income, the Trustee may either pay the whole or any part thereof to our said son or expend it for his benefit — it being the intent that the income from the trust estate not actually paid over to or expended for the benefit of our said son shall not become irrevocably a part of the corpus of such estate, but may thereafter at any time, and from time to time, be by the Trustee either paid over to him or expended for his benefit. . . ."

cisely in point. The difference between that case and this one is that in the *Holmes* trust the settlor had the power to terminate the trust before the date stipulated for expiration. The court's problem was to determine whether the power to "terminate" was a power to "alter or amend." It was held to be so in language which we think is pretty strongly persuasive in our situation here. The court said:

> It seems obvious that one who has the power to terminate contingencies upon which the right of enjoyment is staked, so as to make certain that a beneficiary will have it who may never come into it if the power is not exercised, has power which affects not only the time of enjoyment but also the person or persons who may enjoy the donation.

In this case our question is whether the power which the settlor retained is enough to be called the power to "alter or amend." He could allocate gains to income, so the life tenants would get them, or to corpus, so that the remaindermen would get them. This we think is a very substantial power. So, too, is the power to determine whether or not the life tenants are to get anything at all. It is, of course, well settled that the power to alter or amend does not have to extend to everybody in the world. It is sufficient if the power to allocate exists as among those named as beneficiaries or possible beneficiaries of a trust. We think there is no doubt, therefore, that as to the increase in value of the trusts at the date of the settlor's death, he had the power to alter or amend as to (1) the increments to corpus which had come by the profitable buying and selling of securities, and (2) income of the life tenant which the settlor-trustee could withhold or pay over at his discretion.

Is the taxable interest limited to that just stated or does it include the one half the value of the total estates, as the Commissioner claims? This question the court did not have in the *Holmes* case. There the power to alter or amend by terminating the trust certainly cut across the entire corpus. That is not quite this case. Here the trustee, as explained above, could withhold income from a life tenant, reassign it to corpus and then assign it out again. He could allocate profits from buying and selling trust securities to either corpus or income. He could buy speculative securities if he chose. He was expressly empowered to exercise in dealing with the trust estates "each and every right that might be exercised by one holding the same as his individual property." But we take it that in spite of this clause he could not wilfully eliminate the interests of the remaindermen.

Our legal question, therefore, is whether such a limitation on the power of a grantor has the effect of limiting the power of the United States to levy its estate tax based on the value of the whole trust. The First Circuit has assumed so in a recent dictum. Industrial Trust Company v. Commissioner [infra p. 1201]. In Commissioner v. Bridgeport City Trust Co., 2 Cir. 1941, 124 F.2d 48, the court upheld a claim by the Commissioner to the inclusion of the income beneficiaries' interest in a trust where a settler had reserved to himself the power to reallocate the disposition of the income. It is to be noted, however, that the Commissioner got, by this holding, all that he had claimed. Therefore, the question whether the value of the entire estate could have been subject to the estate tax was not before the court. . . . Our conclusion is that the grantor of these trusts retained to himself as trustee a sufficient power to alter or amend to affect very substantially the interests of the life tenants and the remaindermen, even though he could not, unless he lost all the money of the trusts by unfortunate investments, completely eliminate the remaindermen. He could certainly affect them by many of the things he kept power in himself to do. We think there is enough retained

to bring the grantor within the wording of the statute and that the Commissioner's contention, therefore, must be upheld.

The decision of the Tax Court will be reversed and the case remanded for further proceedings not inconsistent with this opinion.

NOTE

1. *Basis of Hager's Estate.* Was the decision based on the grantor's power to allocate capital gains between the life tenants and the remaindermen? If so, why was the entire corpus, rather than just the amount of such gains, included?

Was it the grantor's power to make investments that brought the corpus into the gross estate? (The investment clause is not set out in the Tax Court opinion, ¶46,266 P-H Memo T.C.) It has usually been assumed that investment powers, at least if they are of a "normal" character, do not bring a trust into the gross estate. Reinecke v. Northern Trust Co., 278 U.S. 339, 346-347 (1929), is the origin of this assumption, but this case was decided under the general language of the postponed-possession-or-enjoyment clause, rather than under the more specific language of §2038. See Commonwealth Trust Co. v. Driscoll, 50 F. Supp. 649 aff'd, 137 F.2d 653 (3d Cir. 1943), cert. denied, 321 U.S. 764, involving an investment clause that was interpreted to mean that the grantor could withdraw any securities from the trust and substitute worthless ones in their place; the court found the clause, as thus construed, to be tantamount to a power to revoke.

For more on the effect of broad powers of administration, when retained by the settlor, see page 1193 infra.

In Whitworth's Estate v. Commissioner, ¶63,041 P-H Memo T.C. (1963), the Internal Revenue Service argued that the value of a widow's right to receive a pension under an employment contract between her deceased husband and his employer was includible in his gross estate under §2038 because until the date of his death he could have cut off her rights expectancy by ceasing to work or breaching the contract. Is this a valid construction of §2038?

2. *Amount includible under §2038.* The final point in *Hager's Estate* — the amount to be included in the gross estate — will be considered again infra page 1208.

3. *Transfers to minors under custodian acts.* What is the estate tax status of property transferred by the donor to himself as custodian for a minor under the recently enacted custodian acts, described in Rev. Rul. 56-484, supra page 386? See Rev. Rul. 57-366, 1957-2 C.B. 618 (property is includible in gross estate, if donor dies while acting as custodian and before donee reaches age of 21).

4. *Effect of retained power on "enjoyment."* Section 2038(a) speaks of a transfer "where the enjoyment thereof was subject at the date of [the decedent's] death to any change through the exercise of a power to alter, amend, revoke, or terminate." For income tax purposes, §674 provides that certain powers over the beneficiary's enjoyment are not sufficiently weighty to require the grantor to report the trust income. Despite the reservation in *Porter* case (supra p. 1144) of the question "whether every change, however slight or trivial, would be within the meaning of [§2038]," there are many powers that clearly engender estate tax liability even though the income produced by the property was not taxable to the grantor during his lifetime because the power was exempted by §674(b).

5. *Relinquishment of power in contemplation of death.* Section 2038(a) applies to property if the decendent could have changed its beneficial enjoyment through the exercise of a power that he relinquished in contemplation of death within the 3-year period prescribed by §2035(b).

6. *The differences between §2038(a)(1) and §2038(a)(2).* There are three differences between §2038(a)(1) and §2038(a)(2), all apparently prompted by White v. Poor, 296 U.S. 98 (1935), where the decedent possessed a power to terminate a trust. In 1919, the decedent conveyed property in trust to herself, her son, and a third person as trustees, conferring the power to terminate on the trustees; in 1920, she resigned as trustee and was

succeeded by her daughter; and in 1921, the daughter resigned and the decedent was reappointed as a trustee by the two other trustees, with the approval of the beneficiaries. The Court of Appeals held that the power to "terminate" did not constitute a power to "alter, amend or revoke." Without passing on this question, the Supreme Court held that the power that the decedent possessed at the time of her death had been acquired "solely by virtue of the action of the other trustees and the beneficiaries, and not in any sense by virtue of any power reserved to herself as settlor in the original declaration of trust" and that "neither technically nor in substance does the power to terminate as it existed from 1921 to the date of [the decedent's] death fall within" what is now §2038-(a)(2). In 1936, Congress divided the "alter, amend, or revoke" provision into two paragraphs, depending upon whether the transfer occurred before or after June 22, 1936, and made the following changes in the post-1936 paragraph:

(a) The addition of the term "terminate," held to be declaratory in the *Holmes* case, supra page 1145.

(b) The addition of the phrase "(in whatever capacity exercisable)." Although the Supreme Court in the *Holmes* case, supra page 1145, refrained from stating whether this phrase was declaratory of the pre-1936 law or not, the lower courts have held that it was. See Jennings v. Smith, infra page 1155.

(c) The addition of the phrase "(without regard to when or from what source the decedent acquired such power)." This phrase apparently is in part declaratory of the existing law. See Vaccaro v. United States, 149 F.2d 1014 (5th Cir. 1945), and Regs. §20.2038-1(d), as to a power to revoke arising by operation of law.* In other respects, however, the change marks a difference of substance, prospectively overruling White v. Poor, supra. Cutcheon v. Commissioner, 3 T.C. 636 (1944).

ESTATE OF SANFORD v. COMMISSIONER

308 U.S. 39 (1939)

MR. JUSTICE STONE delivered the opinion of the Court.

This and its companion case, Rasquin v. Humphreys, post, p. 54, present the single question of statutory construction whether in the case of an inter vivos transfer of property in trust, by a donor reserving to himself the power to designate new beneficiaries other than himself, the gift becomes complete and subject to the gift tax imposed by the federal revenue laws at the time of the relinquishment of the power. Correlative questions, important only if a negative answer is given to the first one, are whether the gift becomes complete and taxable when the trust is created or, in the case where the donor has reserved a power of revocation for his own benefit and has relinquished it before relinquishing the power to change beneficiaries, whether the gift first becomes complete and taxable at the time of relinquishing the power of revocation.

In 1913, before the enactment of the first gift tax statute of 1924, decedent created a trust of personal property for the benefit of named beneficiaries, reserving to himself the power to terminate the trust in whole or in part, or to modify it. In 1919 he surrendered the power to revoke the trust by an appropriate writing in which he reserved "the right to modify any or all of the trusts" but provided that this right "shall in no way be deemed or construed to include any

* In several states voluntary trusts are revocable by the settlor, unless expressly made irrevocable in the trust instrument. Cal. Civ. Code §2280 (Deering, 1960); Okla. Stat., tit. 60, §175.41 (1951); Tex. Rev. Civ. Stat., art. 7425b-41 (Vernon, 1960). In Louisiana, the Code of 1808 provided that interspousal gifts were always revocable; the provision was repealed in 1942. 9 West's L.S.A. §2171 (1950). See Vaccaro v. United States, 149 F.2d 1014 (5th Cir. 1945); Note, 55 Harv. L. Rev. 684 (1942); Cappa, The Effect of Section 2280 of the California Civil Code on the Federal Estate Tax Liability, 15 So. Calif. L. Rev. 155 (1942). Apart from statute, the grantor may have the power to revoke or rescind because of his incapacity, the beneficiary's fraud, etc.; see 3 Scott, Trusts §§329A and 333 (2d ed., 1956).

right or privilege" in the donor "to withdraw principal or income from any trust." In August, 1924, after the effective date of the gift tax statute, decedent renounced his remaining power to modify the trust. After his death in 1928, the Commissioner following the decision in Hesslein v. Hoey, 91 F.2d 954, in 1937, ruled that the gift became complete and taxable only upon decedent's final renunciation of his power to modify the trusts and gave notice of a tax deficiency accordingly.

The order of the Board of Tax Appeals sustaining the tax was affirmed by the Court of Appeals for the Third Circuit, 103 F.2d 81, which followed the decision of the Court of Appeals for the Second Circuit in Hesslein v. Hoey, supra, in which we had denied certiorari, 302 U.S. 756. In the *Hesslein* case, as in the *Humphreys* case now before us, a gift in trust with the reservation of a power in the donor to alter the disposition of the property in any way not beneficial to himself, was held to be incomplete and not subject to the gift tax under the 1932 Act so long as the donor retained that power.

We granted certiorari in this case, 307 U.S. 618, and in the *Humphreys* case, id. 619, upon the representation of the Government that it has taken inconsistent positions with respect to the question involved in the two cases and that because of this fact and of the doubt of the correctness of the decision in the *Hesslein* case decision of the question by this Court is desirable in order to remove the resultant confusion in the administration of the revenue laws.

It has continued to take these inconsistent positions here, stating that it is unable to determine which construction of the statute will be most advantageous to the Government in point of revenue collected. It argues in this case that the gift did not become complete and taxable until surrender by the donor of his reserved power to designate new beneficiaries of the trusts. In the *Humphreys* case it argues that the gift upon trust with power reserved to the donor, not afterward relinquished, to change the beneficiaries was complete and taxable when the trust was created. It concedes by its brief that "a decision favorable to the government in either case will necessarily preclude a favorable decision in the other."

In ascertaining the correct construction of the statutes taxing gifts, it is necessary to read them in the light of the closely related provisions of the revenue laws taxing transfers at death, as they have been interpreted by our decisions. Section 319 et seq. of the Revenue Act of 1924, 43 Stat. 253, reenacted as §501 et seq. of the 1932 Act, 47 Stat. 169, imposed a graduated tax upon gifts. It supplemented that laid on transfers at death, which had long been a feature of the revenue laws. When the gift tax was enacted Congress was aware that the essence of a transfer is the passage of control over the economic benefits of property rather than any technical changes in its title. . . . The rule was thus established, and has ever since been consistently followed by the Court, that a transfer of property upon trust, with power reserved to the donor either to revoke it and recapture the trust property or to modify its terms so as to designate new beneficiaries other than himself is incomplete, and becomes complete so as to subject the transfer to death taxes only on relinquishment of the power at death.

There is nothing in the language of the statute, and our attention has not been directed to anything in its legislative history to suggest that Congress had any purpose to tax gifts before the donor had fully parted with his interest in the property given, or that the test of the completeness of the taxed gift was to be any different from that to be applied in determining whether the donor has retained an interest such that it becomes subject to the estate tax upon its extinguishment at death. The gift tax was supplementary to the estate tax. The two are in pari materia and must be construed together. Burnet v. Guggenheim [supra p. 1007]. An important, if not the main, purpose of the gift tax was to

prevent or compensate for avoidance of death taxes by taxing the gifts of property inter vivos which, but for the gifts, would be subject in its original or converted form to the tax laid upon transfers at death.[1]

Section [2012] provides that when a [gift] tax has been imposed upon a gift, the value of which is required by any provision of the statute taxing the estate to be included in the gross estate, the gift tax is to be credited on the estate tax. The two taxes are thus not always mutually exclusive, as in the case of gifts made in contemplation of death which are complete and taxable when made, and are also required to be included in the gross estate for purposes of the death tax. But [§2012] is without application unless there is a gift inter vivos which is taxable independently of any requirement that it shall be included in the gross estate. Property transferred in trust subject to a power of control over its disposition reserved to the donor is likewise required by [§2038] to be included in the gross estate. But it does not follow that the transfer in trust is also taxable as a gift. The point was decided in the *Guggenheim* case where it was held that a gift upon trust, with power in the donor to revoke it is not taxable as a gift because the transfer is incomplete and that the transfer whether inter vivos or at death becomes complete and taxable only when the power of control is relinquished. We think, as was pointed out in the *Guggenheim* case, that the gift tax statute does not contemplate two taxes upon gifts not made in contemplation of death, one upon the gift when a trust is created or when the power of revocation, if any, is relinquished, and another on the transfer of the same property at death because the gift previously made was incomplete.

It is plain that the contention of the taxpayer in this case that the gift becomes complete and taxable upon the relinquishment of the donor's power to revoke the trust cannot be sustained unless we are to hold, contrary to the policy of the statute and the reasoning in the *Guggenheim* case, that a second tax will be incurred upon the donor's relinquishment at death of his power to select new beneficiaries, or unless as an alternative we are to abandon our ruling in the *Porter* case [supra p. 1144]. The Government does not suggest, even in its argument in the *Humphreys* case, that we should depart from our earlier rulings, and we think it clear that we should not do so both because we are satisfied with the reasoning upon which they rest and because departure from either would produce inconsistencies in the law as serious and confusing as the inconsistencies in administrative practice from which the Government now seeks relief.

There are other persuasive reasons why the taxpayer's contention cannot be sustained. By [§6324(b)], the donee of any gift is made personally liable for the tax to the extent of the value of the gift if the tax is not paid by the donor. It can hardly be supposed that Congress intended to impose personal liabilities upon the donee of a gift of property, so incomplete that he might be deprived of

---

1 The gift tax provisions of the Revenue Act of 1924 were added by amendments to the revenue bill introduced on the floor of the House and the Senate. The sponsor of the amendment in both houses urged the adoption of the bill as a "corollary" or as "supplemental" to the estate tax. Cong. Rec., Vol. 65, Part 3, pp. 3119, 3120, 3122; Part 4, p. 3172; Cong. Rec., Vol. 65, Part 8, pp. 8095, 8096.

The gift tax of 1924 was repealed when Congress, concurrently with the enactment of §302(c) of the Revenue Act of 1926, 44 Stat. 70, 125, 126, establishing a conclusive presumption that gifts within two years of death were made in contemplation of death and therefore subject to the estate tax. A gift tax was reenacted by §501 of the Revenue Act of 1932, 47 Stat. 169, shortly after it was decided in Heiner v. Donnan, 285 U.S. 312, that the legislative enactment of such a presumption violated the Fifth Amendment.

Section 501(c) of the 1932 Act added a new provision that transfers in trust, with power of revocation in the donor, should be taxed on relinquishment of the power. This was repealed by §511 of the Act of 1934, 48 Stat. 680, because Burnet v. Guggenheim, 288 U.S. 280, had declared that such was the law without specific legislation. H.R. No. 704, 73rd Cong., 2d Sess., p. 40; Sen. Rep. No. 558, 73rd Cong., 2d Sess., p. 50.

it by the donor the day after he had paid the tax. Further, [§2522] exempts from the tax, gifts to religious, charitable, and educational corporations and the like. A gift would seem not to be complete, for purposes of the tax, where the donor has reserved the power to determine whether the donees ultimately entitled to receive and enjoy the property are of such a class as to exempt the gift from taxation. Apart from other considerations we should hesitate to accept as correct a construction under which it would plausibly be maintained that a gift in trust for the benefit of charitable corporations is then complete so that the taxing statute becomes operative and the gift escapes the tax even though the donor should later change the beneficiaries to the non-exempt class through exercise of a power to modify the trust in any way not beneficial to himself.

The argument of petitioner that the construction which the Government supports here, but assails in the *Humpreys* case, affords a ready means of evasion of the gift tax is not impressive. It is true, of course, that under it gift taxes will not be imposed on transactions which fall short of being completed gifts. But if for that reason they are not taxed as gifts they remain subject to death taxes assessed at higher rates, and the Government gets its due, which was precisely the end sought by the enactment of the gift tax.

Nor do we think that the provisions of [§676(a), relating to income tax, supra p. 367] have any persuasive influence on the construction of the gift tax provisions with which we are now concerned. One purpose of the gift tax was to prevent or compensate for the loss of surtax upon income where large estates are split up by gifts to numerous donees. Congress was aware that donors in trust might distribute income among several beneficiaries, although the gift remains so incomplete as not to be subject to the tax. It dealt with that contingency in [§676(a)] which taxes to the settlor the income of a trust paid to beneficiaries where he reserved to himself an unexercised power to "revest in himself title" to the trust property producing the income. Whether this section is to be read as relieving the donor of the income tax where the power reserved is to modify the trust, except for his own benefit, we do not now decide. If Congress, in enacting it, undertook to define the extent to which a reserved power of control over the disposition of the income is equivalent to ownership of it so as to mark the line between those cases on the one hand where the income is to be taxed to the donor and those on the other where, by related sections, the income is to be taxed to the trust or its beneficiaries, we do not perceive that the section presents any question so comparable to that now before us as to affect our decision. We are concerned here with a question to which Congress has given no answer in the words of the statute, and it must be decided in conformity to the course of judicial decision applicable to a unified scheme of taxation of gifts whether made inter vivos or at death. If Congress, for purpose of taxing income, has defined precisely the amount of control over the income which it deems equivalent to ownership of it, that definition is controlling on the courts even though without it they might reach a different conclusion, and even though retention of a lesser degree of control be deemed to render a transfer incomplete for the purpose of laying gift and death taxes.

The question remains whether the construction of the statute which we conclude is to be derived from its language and history, should be modified because of the force of treasury regulations or administrative practice. [The Court went on to hold that the Regulations were "ambiguous and without persuasive force in determining the true construction of the statute" and that the administrative practice was too inconsistent to be accepted as an expert interpretation of the statute.]

Affirmed.

MR. JUSTICE BUTLER took no part in the consideration or decision of this case.

NOTE

1. *Implications of Sanford case.* Is a gift tax payable on the creation of a trust of the type involved in Commissioner v. Chase National Bank, supra page 1144? Higgins v. Commissioner, 129 F.2d 237 (1st Cir. 1942), cert. denied, 317 U.S. 658. Of the type involved in Commissioner v. Estate of Holmes, supra page 1145? Regs. §25.2511-2(b), (c), and (d).

2. *Tax-free release of "Sanford trust" powers.* In 1943, the gift tax law was amended to permit the tax-free release of a power like that held by the grantor in the *Sanford* case. This dispensation was available only if the trust was created before January 1, 1939, and the release had to occur before January 1, 1948, unless reasonable cause for delay was established. This opportunity to release "Sanford trust" powers without payment of gift tax is reflected by §2038(c), exempting the grantor from estate tax if he was unable to release his power because of mental disability. See Supplee v. Smith, 242 F.2d 855 (3d Cir. 1957); Paul, Federal Estate and Gift Taxation §17.07A (1946 Supp.).

2. *Where Grantor's Power Is Restricted*

a. BY A REQUIREMENT OF NOTICE OR LAPSE OF TIME

Transferred property is includible under §2038 only if enjoyment "was subject *at the date of* [the decedent's] *death* to any change through the exercise of a power . . . by the decedent." What if the decedent was required to give 12 months' notice of his intention to exercise the power or if the change was to take effect only 12 months after exercise of the power? See §2038(b), explained by the House Committee on Ways and Means (H.R. Rept. No. 704, 73d Cong., 2d Sess., 1939-1 C.B. (Part 2) p. 581):

> However, if the retained right to alter, amend, or revoke could be exercised only after a precedent notice of, say, a year, or if the alteration, amendment, or revocation would become effective only after a lapse of time after A performed the act which gave rise to the alteration, amendment, or revocation, it might be contended that under existing law the property is not includible in the decedent's gross estate. While it is believed that such contention would not be well founded, your committee believes it desirable to clarify the law so that under such circumstances it will be entirely clear that all the property of which the decedent at the date of his death has to all intents and purposes practical, if not technical, ownership, is to be included in his gross estate. This section [§2038(b)] clarifies the existing law [pre-1934] on the subject and expressly provides that, although a notice may be required as a condition precedent to exercising the right to alter, amend, or revoke, nevertheless the full value of the property at the date of the decedent's death must be included in the gross estate, less only the outstanding estate (measured by the period required to elapse between the giving of the notice and the taking effect of any alteration, amendment, or revocation) which at the decedent's death is irrevocably beyond his control.

Does the decedent have a power "at the time of his death" under §2038 if he could not exercise it immediately before his death because of incompetence, perhaps caused by the last illness itself? In Hurd v. Commissioner, 160 F.2d 610, 613 (1st Cir. 1947), a power held by the grantor as trustee was charged against him despite his incapacity, but the court indicated that the result would have been otherwise had he resigned or been removed before death. It also hinted, however, that if a successor fiduciary had been appointed to act for him, he would be considered as still possessing the power at the time of his death.

b. BY A STANDARD OR CONTINGENCY

JENNINGS v. SMITH

161 F.2d 74 (2d Cir. 1947)

Before SWAN, CHASE and FRANK, Circuit Judges.

SWAN, Circuit Judge.

This is an action by the executors of the will of Oliver Gould Jennings, a resident of Connecticut whose death occurred on October 13, 1936, to recover such part of the estate tax paid by them to the defendant collector as had been illegally collected. Their right to a refund of the amount claimed is clear under Maass v. Higgins, 312 U.S. 443, and was not disputed; but the defendant set up in defense an additional estate tax liability (greater than the alleged overpayment) based on the failure to include in the decedent's gross estate the value of certain property which he had transferred in trust in 1934 and 1935. Although assessment of an additional estate tax was barred by the statute of limitations, the plaintiffs do not contend that they are entitled to a refund unless the tax legally due was overpaid. See Lewis v. Reynolds, 284 U.S. 281. Hence the question presented at the trial and renewed here, is whether the value of the trust property should have been included in the gross estate. The district court held it includible under [§2038]. Accordingly judgment was given for the defendant, and the plaintiffs have appealed.

In December 1934 the decedent set up two trusts: one for the family of his elder son, B. Brewster Jennings, the other for the family of his younger son, Lawrence K. Jennings. The trust instruments were identical, except for the names of the beneficiaries and the property transferred. In discussing the terms of the trusts it will suffice to refer to the one set up for the elder son's family. The trust was irrevocable and in so far as legally permissible its provisions were to be interpreted and enforced according to Connecticut law. It reserved no beneficial interest to the settlor. He and his two sons were named as the trustees; in case a vacancy should occur provision was made for the appointment of a successor trustee having like powers; there were always to be three trustees and they were authorized to act by majority vote. At the end of each year during the life of the son, the trustees were to accumulate the net income by adding it to the capital of the trust but they were given power, "in their absolute discretion" at any time during the year and prior to the amalgamation of that year's net income into capital, to use all or any part of it for the benefit of the son or his issue provided "the trustees shall determine that such disbursement is reasonably necessary to enable the beneficiary in question to maintain himself and his family, if any, in comfort and in accordance with the station in life to which he belongs." Upon the death of the son the capital of the trust was to be divided into separate equal trust funds, one for each of his surviving children and one for each deceased child who left issue surviving at the death of the son. The trustees also had power to invade the capital upon the terms set out in paragraph 3(f) of the trust deed. In the Lawrence K. Jennings trust all current net income for the years 1935 and 1936 was paid to him, the trustees, of whom the decedent was one, having unanimously determined that such payments were necessary to enable Lawrence to maintain himself and his family in comfort and in accordance with his station in life. No payment or application of income of the B. Brewster Jennings trust, and none of capital of either trust, was made or requested during the life of the decedent.

Gift tax returns covering the transfers in trust were duly filed and taxes paid thereon. The trusts were not created in contemplation of death, nor to reduce estate taxes on the settlor's estate.

[The court held that a power exercisable in a fiduciary capacity is includible under §2038(a)(2), as under §2038(a)(1), because the addition of the parenthetical clause "in whatever capacity exercisable" in §2038(a)(1) was declaratory of existing law. See Commissioner v. Newbold's Estate, 158 F.2d 694.]

The next question is whether the powers conferred upon the trustees in the case at bar are powers of the character described in [§2038(a)(2)], which requires that enjoyment of the trust property must be subject at the date of the decedent's death to change through the exercise of a power. The trustees' power to invade the capital of the trust property was exercisable only if the son or his issue "should suffer prolonged illness or be overtaken by financial misfortune which the trustees deem extraordinary." Neither of these contingencies had occurred before the decedent's death; hence enjoyment of the capital was not "subject at the date of his death to any change through the exercise of a power." In Commissioner v. Flanders, 2 Cir., 111 F.2d 117, although decision was rested on another ground, this court expressed the opinion that a power conditioned upon an event which had not occurred before the settlor's death was not within the section. In support of this view we cited Tait v. Safe Deposit & Trust Co., 4 Cir., 74 F.2d 851, 858; Day v. Commissioner, 3 Cir., 92 F.2d 179; Patterson v. Commissioner, 36 B.T.A. 407. The question has recently been explored by the Tax Court in Estate of Budlong v. Commissioner, 7 T.C. 758.* There it was held in a convincing opinion that the power of trustees to invade corpus in case of "sickness or other emergency," which had not occurred before the decedent's death, was not a power to "alter, amend or revoke" within the meaning of the statute. The court reasoned that the trustees had not unlimited discretion to act or withhold action under the power, since the trust instrument provided an external standard which a court of equity would apply to compel compliance by the trustees on the happening of the specified contingency or to restrain threatened action if the condition were not fulfilled. In the case at bar the district judge was of opinion that even if the trustees found that the stated conditions had been fulfilled, "their finding created no enforcible rights in any of the beneficiaries." 63 F. Supp. at 837. In this view we are unable to concur. The condition upon which the power to invade capital might arise is sufficiently definite to be capable of determination by a court of equity. As Judge L. Hand said in Stix v. Commissioner, 2 Cir., 152 F.2d 562, 563, "no language, however strong, will entirely remove any power held in trust from the reach of a court of equity." . . . Since the trustees were not free to exercise untrammeled discretion but were to be governed by determinable standards, their power to invade capital, conditioned on contingencies which had not happened, did not in our opinion bring the trust property within the reach of [§2038(a)(2)].

Similar reasoning leads to the same conclusion with respect to the trustees' power over net income. At the end of each calendar year they were to accumulate the net income of that year unless prior to its amalgamation into capital they exercised their power to disburse it to, or for the benefit of, the son or his issue. The power the trustees had with respect to disbursing income was exercisable year by year; and at the date of the decedent's death the only income of which the enjoyment was subject to change through exercise of a power was the income of the B. Brewster Jennings trust for the year 1936. But the exercise of this

* Aff'd in part, rev'd in part, sub nom. Industrial Trust Co. v. Commissioner, infra page 1201. — Ed.

power was conditioned on the trustees' determination that disbursement of the income was necessary to enable the beneficiary to whom it might be allotted to maintain himself and his family "in comfort and in accordance with the station in life to which he belongs." The contingency which would justify exercise of the power had not happened before the decedent's death; consequently the 1936 net income of the B. Brewster Jennings trust was not subject at the date of the decedent's death "to any change through the exercise of a power." Hence it was not includible in the gross estate of the decedent under [§2038(a)(2)]. This conclusion is not inconsistent with Commissioner v. Newbold's Estate, 2 Cir., 158 F.2d 694, for there the trustees had unlimited discretion, the trust instrument expressly providing that no beneficiary should have any vested right to receive any payment from income. . . .

The judgment is reversed and the cause remanded with directions to enter judgment for the plaintiffs.

NOTE

1. *Contingent powers under §2038.* With the court's statement that a contingent power is not within the reach of §2038 if the contingency has not occurred before the decedent's death, see Regs. §20.2038-1(b), stating that "section 2038 is not applicable to a power the exercise of which was subject to a contingency beyond the decedent's control which did not occur before his death (e.g., the death of another person during the decedent's life)." Before 1954, however, the Regulations took the position that a power to alter, amend, or revoke "will be considered to have existed on the date of the decedent's death . . . though the exercise of the power was restricted to a particular time which had not arrived or the happening of a particular event which had not occurred, at decedent's death." See In re Field's Estate, 143 F. Supp. 520 (S.D.N.Y. 1956).

What is the status of a power dependent on a contingency over which the grantor has some control — e.g., his marriage or divorce?

If the beneficiary in Jennings v. Smith had suffered a prolonged illness or a financial misfortune during the decedent's life, would part or all of the corpus of the trust have been includible in the gross estate?

2. *The "enforceable external standard."* How restricted was the discretion of the trustees in Jennings v. Smith? See Estate of Wilson v. Commissioner, 13 T.C. 869 (1949), aff'd per curiam, 187 F.2d 145 (3d Cir. 1951), holding that the following clause embodied an "adequate external standard" to govern the discretion of the trustee: "The Trustee may in its absolute discretion accelerate payments of interest or principal in case of need for educational purposes or because of illness or for any other good reason." See also Estate of Wier v. Commissioner, 17 T.C. 409, 418-420 (1951), holding that the following clause was sheltered by Jennings v. Smith: ". . . the Trustees [the decedent and his brother] shall expend from time to time as they may deem necessary or proper for the support, maintenance and education of [the decedent's daughter] such sum or sums as such Trustees shall in their sole discretion consider to the interest and advantage of [the beneficiary]. . . . [The beneficiary] shall be properly maintained, educated and supported in the manner appropriate to her station in life, and if, in the discretion and judgment of the said Trustees, it be necessary to that end, at any time or times, to use all of the income or even all of the corpus of the trust estate hereby created and all augmentations thereof, it shall be the duty of the Trustees to see that [the beneficiary] shall be properly maintained, educated and supported." (It was apparently not contemplated that any of the income or corpus would be so distributed, because the beneficiary was otherwise adequately provided for, but the Tax Court did not rest on this ground.)

A contrary result was reached in Hurd v. Commissioner, 160 F.2d 610 (1st Cir. 1947), where the trustees could pay over the corpus of a trust to the decedent-grantor's wife "if in their opinion the circumstances so require." The court said:

> The word "circumstances," as used in the trust instrument, is as wide as the world and to say that it imposes a legal limitation, or imports a controlling contingency, is

> to stretch it far beyond good sense. We entertain grave doubts that any equity court would harken to the complaints of a disaffected cestui who might interpose objections to the decedent's invasion of the principal for the use of his wife, irrespective of the "circumstances." The clause is not restricted to "her" circumstances, but rather to "the" circumstances. It is difficult to think of a much broader reservation of powers. . . . [160 F.2d at 612-613.]

See also Estate of Yawkey v. Commissioner, infra page 1206, holding that a power to be exercised "in the best interest of the beneficiary" is not protected by Jennings v. Smith; United States v. Powell, 307 F.2d 821 (10th Cir. 1962) (invasion permitted for "maintenance, welfare, comfort or happiness" of beneficiaries; held, an enforceable standard); Michigan Trust Co. v. Kavanaugh, 284 F.2d 502 (6th Cir. 1960) (power to terminate "should what the Trustee deems a special emergency arise"; held, taxable); Regs. §1.674(b)-1(b)(5) ("reasonably definite standard" in income tax context).

In Theopold v. United States, 164 F.2d 404 (1st Cir. 1947), the court said of a power retained by the settlor of a trust "to amend this trust instrument so that it will more clearly express my actual intentions if I shall consider such amendment advisable, as to which I shall be the sole judge":

> . . . the reserved power as we construe it, while a power to amend in the sense of altering language so as more clearly to express an original intention, is not a power to amend in the sense of altering language to express a new or different intention. And so construed we consider it, if in the statutory sense a power to amend at all, to be a power to make only "slight" or "trivial" changes in the trust instrument and hence not a power within the meaning of the taxing statute. [164 F.2d at 407.]

3. *Decedent as beneficiary of contingent power.* If the decedent possessed a power that could be exercised in his own favor upon the occurrence of a contingency (e.g., a power to retake the corpus in the event of prolonged illness or financial misfortune), does the doctrine of Jennings v. Smith apply? See page 1164 infra.

4. *Reference.* Pedrick, The Artful Dodger Faces Life and Looks at Death, 28 Taxes 1151 (1950).

C. BY A REQUIREMENT THAT OTHERS JOIN IN GRANTOR'S ACTION

HELVERING v. CITY BANK FARMERS TRUST CO.

296 U.S. 85 (1935)

MR. JUSTICE ROBERTS delivered the opinion of the Court.

The questions for decision are whether [§2038(a)(2)] requires inclusion in the gross estate of the value of the corpus of a trust established in 1930 where the creator reserved a power to revoke or modify, to be exercised jointly with a beneficiary and the trustee; and whether, if such value is to be included in the gross estate, the section offends the Fifth Amendment. . . .

The Circuit Court of Appeals thought our decision in Reinecke v. Northern Trust Co., 278 U.S. 339, required the language of the Act to be construed as tantamount to "in conjunction with any person not a beneficiary." So limited it is inapplicable to the trust in question.

The *Reinecke* case involved §402(c) of the Revenue Act of 1921, which directed the inclusion in the gross estate of all property "To the extent of any interest therein of which the decedent has at any time made a transfer, or with respect to which he has at any time created a trust, in contemplation of or intended to take effect in possession or enjoyment at or after his death. . . ." It was held that a gift beyond the power of the grantor to alter, amend or revoke could not be said to take effect in possession or enjoyment at or after his death. Con-

versely, one which he alone held the power to revoke or modify came within the section, since, at his death, substantial interests passed from his control and were for the first time confirmed in others. The case involved nothing more than a determination whether the transfers were complete when made. If they were the statute did not reach them.* Here we have a different problem, for [§2038(a)(2)] on its face embraces Mrs. James' transfer, although complete when made and thereafter beyond her own unfettered control.

The respondent says that the section ought to be construed in the light of the analogous §219(g) [1921 Act]. The latter, part of the income tax title, is "Where the grantor of a trust has, at any time during the taxable year, either alone or in conjunction with any person not a beneficiary of the trust, the power to revest in himself title to any part of the corpus of the trust, then the income of such part of the trust for such taxable year shall be included in computing the net income of the grantor." † The two sections have a cognate purpose but they exhibit marked differences of substance. The one speaks of a power to be exercised with one not a beneficiary; the other of a power to be exercised with any person. The one refers to a power to revest the corpus in the donor; the other has no such limitation. It is true, the Report of the Ways and Means Committee on [§2038] said: "this provision is in accord with the principle of [§676(a)] of the bill which taxes to the grantor the income of a revocable trust." But to credit the assertion that the difference in phraseology is without significance and in both sections Congress meant to express the same thought, would be to disregard the clear intent of the phrase "any person" employed in [§2038]. We are not at liberty to construe language so plain as to need no construction, or to refer to Committee reports where there can be no doubt of the meaning of the words used. The section applies to this transfer.

We are next told that if the Act means what it says it taxes a transfer as one taking effect at death though made prior to death and complete when made; that to do this is arbitrary and deprives the taxpayer of property without due process.

The section was first introduced into the Revenue Act of 1924, and reenacted in that of 1926. Mrs. James created her trust in 1930. She was, therefore, upon notice of the law's command, and there can be no claim that the statute is retroactive in its application to her transfer.

The inquiry is whether it is arbitrary and unreasonable to prescribe for the future that, as respects the estate tax, a transfer, complete when made, shall be deemed complete only at the transferor's death, if he reserves power to revoke or alter exercisable jointly with another.

The respondent insists that a power to recall an absolute and complete gift only with the consent of the donee is in truth no power at all; that in such case the so-called exercise of the power is equivalent to a new gift from the donee to the donor. And so it is claimed that the statute arbitrarily declares that to exist

---

* Reinecke v. Northern Trust Co. was decided under the Revenue Act of 1921, which reached transfers only if they were in contemplation of death or "intended to take effect in possession or enjoyment" at or after the transferor's death. The Court held that two trusts revocable by the grantor alone came within this language, but that five other trusts whose revocation required the consent of the beneficiaries were not reached by the statute. As to these five trusts, the Court said: "Since the power to revoke or alter was dependent on the consent of the one entitled to the beneficial and consequently adverse, interest, the trust, for all practical purposes, had passed as completely from any control by decedent which might inure to his own benefit as if the gift had been absolute." See Regs. §20.2038-1(e). Since 1924, however, the statute has expressly reached transfers if enjoyment was subject to a power to alter, amend, or revoke, exercisable by the decedent alone or in conjunction with any person. — Ed.

† The current equivalent of this provision is §676(a), supra page 370, which taxes the grantor on the trust income if he or a "non-adverse party" has power to revest title in the grantor. — Ed.

which in fact and law is nonexistent. The position is untenable. The purpose of Congress in adding [§2038] to the section as it stood in an earlier act was to prevent avoidance of the tax by the device of joining with the grantor in the exercise of the power of revocation someone who he believed would comply with his wishes. Congress may well have thought that a beneficiary who was of the grantor's immediate family might be amenable to persuasion or be induced to consent to a revocation in consideration of other expected benefits from the grantor's estate. Congress may adopt a measure reasonably calculated to prevent avoidance of a tax. The test of validity in respect of due process of law is whether the means adopted are appropriate to the end. A legislative declaration that a status of the taxpayer's creation shall, in the application of the tax, be deemed the equivalent of another status falling normally within the scope of the taxing power, if reasonably requisite to prevent evasion, does not take property without due process. But if the means are unnecessary or inappropriate to the proposed end, are unreasonably harsh or oppressive, when viewed in the light of the expected benefit, or arbitrarily ignore recognized rights to enjoy or to convey individual property, the guarantee of due process is infringed.

Illustrations are not lacking of cases falling on either side of the line.

Congress may require that property transferred in contemplation of death, although the transfer is so remote in time as not to comply with the requirements of a gift causa mortis, shall nevertheless be treated as part of the estate for purposes of taxation: this for the prevention of evasion and the giving of practical effect to the exercise of admitted power. This is true despite the fact that the statutory prescription embraces gifts inter vivos which are in fact fully executed, irrevocable and cannot be defeated.

Although property received by gift from another is capital in the hands of the donee, the gain upon a sale may be measured by the cost to the donor rather than the value at the time of acquisition by the donee.

It is competent for Congress, in order to avoid the evasion of tax, to declare that when one has placed his property in trust subject to a right of revocation in himself and another who is not the beneficiary he shall, nevertheless, be deemed to control the property in such sense that the income therefrom shall be treated as his income for the levying of a tax. So also where an irrevocable trust is established to pay for insurance on the settlor's life, to collect the policy upon his death, and to hold or apply the proceeds for the benefit of his dependents, Congress may declare the income of the trust fund taxable to the settlor as part of his own income.

In the instances cited the power to levy an excise upon the testamentary transfers or to tax income was conceded. To effectuate the exercise of this admitted power and to prevent evasion Congress was held to have acted reasonably in including within the sweep of the statute a status or an act not normally within its reach.

There are, however, limits to the power of Congress to create a fictitious status under the guise of supposed necessity. Thus it has been held that an act creating a conclusive presumption that a gift made within two years prior to death was made by the donor in contemplation of death, and requiring the value of the gift to be included in computing the estate of the decedent subject to transfer tax, is so grossly unreasonable as to violate the due process clause of the Fifth Amendment. In the same category falls a statute seeking to tax the separate income of a wife as income of her husband.

In view of the evident purpose of Congress we find nothing unreasonable or arbitrary in the provisions of [§2038] as applied in the circumstances of this case. It was appropriate for Congress to prescribe that if, subsequently to the passage

of that Act, the creator of a trust estate saw fit to reserve to himself jointly with any other person the power of revocation or alteration, the transaction should be deemed to be testamentary in character, that is, treated for the purposes of the law as intended to take effect in possession or enjoyment at the death of the settlor.

The judgment is reversed.

MR. JUSTICE VAN DEVANTER, MR. JUSTICE MCREYNOLDS, MR. JUSTICE SUTHERLAND and MR. JUSTICE BUTLER are of opinion that the judgment should be affirmed.

HELVERING v. HELMHOLZ

296 U.S. 93 (1935)

MR. JUSTICE ROBERTS delivered the opinion of the Court.

This case, like Helvering v. City Bank &c. Tr. Co., ante, p. 85, arises under [§2038(a)(2)]. The respondent is administrator and sole beneficiary of the estate of his wife, Irene C. Helmholz. In 1918 she, her father and mother and her brothers and sisters joined in an indenture conveying to a trustee all of the shares of stock in the Patrick Cudahy Family Company. Her contribution was 999 shares, the dividends from which the trustee was to receive, and pay, less expenses, to Mrs. Helmholz for life, remainder to her appointee by will and remainder to her issue; and in event she or any other subscriber should die without issue the net dividends on the stock delivered to the trustee by such decedent were to be paid "to the surviving subscribers or their issue living at the time of distribution proportionately by right of representation."

The paragraph of the indenture relative to the termination of the trust is:

> Fifth: The term of the primary trust hereby created shall end (1) upon the death of the last surviving grandchild of Patrick and Anna M. Cudahy, they being then deceased, or (2) upon delivery to the said trustee of a written instrument signed by all of the beneficiaries, other than testamentary appointees, declaring said trust term at an end, or (3) upon delivery to said trustee of a copy (certified by the president or secretary of the Patrick Cudahy Family Company and under its corporate seal) of a resolution adopted by unanimous vote of the board of directors of said corporation declaring said trust term at an end, whereupon and in either of said events the said trustee shall distribute the capital stock of the said Patrick Cudahy Family Company to the beneficiaries then entitled to receive the net dividends thereof other than testamentary appointees; excepting the shares to the dividends upon which such testamentary appointees are entitled, which shall be held by said trustee as hereinbefore provided.
>
> The term of the primary trust hereby created shall also terminate upon the dissolution of the said Patrick Cudahy Family Company in the manner and for any of the causes provided by law, whereupon the trustee shall distribute all the proceeds and assets by it received upon the liquidation of said corporation to the beneficiaries other than testamentary appointees then entitled to receive net dividends or income in the proportion in which they are severally entitled, excepting the proceeds and (or) assets of shares to the net dividends or income upon which testamentary appointees are entitled, which shall continue to be held in trust as hereinbefore provided.
>
> The term of the primary trust hereby created shall also terminate upon the extinction of issue of the said Patrick and Anna M. Cudahy, they being then deceased, whereupon the said trustee shall convey and transfer the stock of the said Patrick Cudahy Family Company to the Wisconsin Trust Company as trustee, to have and to hold the same upon the trusts and for the uses and purposes embraced in a certain resolution or declaration of trust adopted by the board of directors of the Wisconsin Trust Company May 24, 1915, establishing a certain community trust known as the Milwaukee Foundation for administration and distribution as in said trust declaration prescribed and defined, subject, however, to any existing valid testamentary appointments made by subscribers hereto as hereinbefore provided.

Irene C. Helmholz left a will bequeathing all her property to respondent. The Supreme Court of Wisconsin held this a valid exercise of her power of appointment under the trust deed. [First Wisconsin Trust Co. v. Helmholz, 198 Wis. 573, 225 N.W. 191.] The petitioner determined that the value of the 999 shares should be included in her gross estate. The Board of Tax Appeals reversed this determination. The United States Court of Appeals for the District of Columbia, to which an appeal was taken pursuant to stipulation for hearing by that court, affirmed the Board. We granted certiorari.

What is said in Helvering v. City Bank & Tr. Co., supra, shows that the transfer was complete when the trust was created in 1918. The features which differentiate this case are the absence of a reserved power of revocation or alteration and the retroactive operation of the Act. Either requires a decision that the corpus of the trust may not be included in the gross estate.

The words of [§2038(a)(2)] are, "where the enjoyment [of the transfer] was subject at the date of his death to any change *through the exercise of a power,* either by the decedent alone or in conjunction with any person, *to alter, amend or revoke. . . .*" The agreement under consideration contains no such power as that described. Like every well drawn instrument it embodies provisions for the termination of the trust. An examination of paragraph Fifth shows that these were, in the main, such as any farsighted settlor would employ. Since the beneficiaries were the issue of Patrick and Anna Cudahy it was natural to provide that upon the extinction of issue the trust should terminate and the principal be turned over to a secondary charitable trust. Inasmuch as the corpus comprised only the shares of a corporation there was nothing out of the ordinary in requiring that the trust terminate upon dissolution of the company and that the proceeds of liquidation be distributed amongst the then beneficiaries. It was not unnatural to direct that the trust should end if the managers of the company should unanimously so decide. And termination upon the death of the last surviving grandchild of Patrick and Anna Cudahy, they being then deceased, is certainly not unusual.

The petitioner, however, pitches upon the only remaining event of termination, asserting it to be the equivalent of a power to revoke, or to amend, to be exercised by the settlor with others. This is found in the clause providing that the delivery to the trustee of a writing signed by all the then beneficiaries (other than testamentary appointees) declaring such purpose, shall be effective to end the trust. He points out that such a writing might have been executed by Mrs. Helmholz and her co-beneficiaries while she was alive, with the effect of revesting in her the shares which she had delivered into the trust. This argument overlooks the essential difference between a power to revoke, alter or amend, and a condition which the law imposes. The general rule is that all parties in interest may terminate the trust. The clause in question added nothing to the rights which the law conferred. Congress cannot tax as a transfer intended to take effect in possession or enjoyment at the death of the settlor a trust created in a state whose law permits all the beneficiaries to terminate the trust.

Another and more serious objection to the application of [§2038(a)(1)] in the present instance is its retroactive operation. The transfer was complete at the time of the creation of the trust. There remained no interest in the grantor. She reserved no power in herself alone to revoke, to alter or to amend. Under the revenue act then in force the transfer was not taxable as intended to take effect in possession or in enjoyment at her death. Reinecke v. Northern Trust Co. [supra p. 1143]. If [§2038(a)(2), enacted in 1926] could fairly be considered as intended to apply in the instant case its operation would violate the Fifth Amendment. Nichols v. Coolidge, 274 U.S. 531.

The judgment is affirmed.

MR. JUSTICE BRANDEIS, MR. JUSTICE STONE and MR. JUSTICE CARDOZO concur in the result on the ground last stated in the opinion.

NOTE

1. *Power vested in all beneficiaries jointly.* Termination of the Helmholz trust could be accomplished by the living beneficiaries, despite the possibility that persons yet unborn (after-born grandchildren) would become beneficiaries. Although this is the law of New York (Smith v. Title Guarantee & Trust Co., 287 N.Y. 500, 41 N.E.2d 72 (1942), interpreting §23 of the N.Y. Personal Property Law), it is not ordinarily possible to cut off the rights of unborn or unascertained beneficiaries — unless the trust instrument so provides. 3 Scott, The Law of Trusts (2d ed. 1956) §340. Cf. Lowndes, Federal Taxation of North Carolina Trusts for Unborn and Unascertained Beneficiaries, 20 N.C.L. Rev. 278 (1942), which was followed by an amendment of the North Carolina law, with Estate of Coulter v. Commissioner, 7 T.C. 1280 (1946), and Estate of Seltzer v. Commissioner, 10 T.C. 810 (1948).

See Regs. §20.2038-1(a)(2), stating that a power does not count under §2038 if it "could be exercised only with the consent of all parties having an interest (vested or contingent) in the transferred property, and if the power adds nothing to the rights of the parties under local law." Does this mean the same as "all the persons beneficially interested" as used in §23 of the N.Y. Personal Property Law, namely, "all *living* persons beneficially interested"?

2. *Power exercisable by third person.* Because §2038 speaks of a power exercisable "by the decedent alone or by the decedent in conjunction with any other person," a power vested in a third person alone is not charged against the grantor by §2038. In determining whether the income of a trust is taxable to the grantor, however, a power vested in a "non-adverse party" is ordinarily treated as though it were held by the grantor himself. §§674-677; supra page 370. There are some exceptions: §674(c) and (d); §675(3). Is there any reason why powers held by a non-adverse person should ordinarily be imputed to the grantor for income tax purposes, but not under the estate tax?

Could a third person be treated as the decedent's alter ego under §2038? See Delaney v. Gardner, 204 F.2d 855 (1st Cir. 1953) (property transferred to non-stock membership corporation; held, not decedent's instrumentality); Kneeland v. Commissioner, 34 B.T.A. 816 (1936) (power to revoke vested in decedent's wife; held, trust not within §2038).

3. *Decedent's power to remove trustee in whom power is vested.* If a power to revoke, amend, etc. was vested in a trustee who could be removed at will by the decedent, and the decedent could have appointed himself as successor trustee, the property is includible under §2038. Regs. §20.2038-1(a)(3); Van Beuren v. McLoughlin, 262 F.2d 315 (1st Cir. 1958). But if the decedent could have named himself only if the trustee had voluntarily resigned, it has been held that §2038 is inapplicable unless the event occurred. United States v. Winchell, 289 F.2d 212 (9th Cir. 1961). What if the decedent retained the unfettered power to remove trustees, but not the right to take over the office himself?

4. *Power to initiate or veto action by third person.* In Thorp's Estate v. Commissioner, 164 F.2d 966 (3d Cir. 1947), cert. denied, 333 U.S. 843 (1948), the corpus of a trust was held to be includible under §2038 because it could be terminated on request by the beneficiaries, provided the decedent consented to such action: "regardless of who could set in motion the termination machinery, the trust could be terminated only by the action of the decedent in conjunction with others." A similar case is Du Charme's Estate v. Commissioner, 164 F.2d 959 (6th Cir. 1947). Does such a veto power come within the "contingency" exception of Regs. §20.2038-1(b) (§2038 not applicable "to a power the exercise of which was subject to a contingency beyond the decedent's control which did not occur before his death")? In Kasch's Estate v. Commissioner, 30 T.C. 102 (1958), the trustees were empowered to invade corpus for "the proper care, support and medical attention" of the beneficiaries, provided the decedent consented. The court held that his power was "contingent" within the meaning of Jennings v. Smith (supra p. 1155). Assuming that the trust instrument permitted the trustees to invade corpus

only under an enforceable external standard, but the decedent's power to veto their decision was wholly discretionary, should the corpus have been included in his estate under §2038?

In United States v. Winchell, 289 F.2d 212 (9th Cir. 1961), the decedent had created an inter vivos trust, reserving the right to confer "additional powers" on the trustee. On the ground that this right was equivalent to a power to alter, amend, or revoke under §2038, the government asserted that the corpus was includible in the decedent's gross estate. The District Court held (180 F. Supp. 710) that the decedent had reserved only the right to grant additional powers "of an administrative or managerial nature . . . necessary to the orderly and effective administration of said trust, and that no such provision or any other provision of said trust permitted the decedent to change the economic benefits of the property held in trust," and that this reserved power was not embraced by §2038. The appellate court held that even if the decedent could have conferred additional "plenary" powers on the trustee, the powers so conferred would have been exercisable only by the trustee, so that any change in beneficial enjoyment would have been made by the trustee rather than by the grantor. For a contrary result, see Fidelity Union Trust Co. v. United States, 126 F. Supp. 527 (Ct. Cl. 1954).

5. *Decedent's right to compel distributions to himself.* If the third person is authorized by the trust instrument to make distributions to the grantor should he suffer unusual medical expenses or a financial misfortune, is the property includible in the grantor's gross estate? A line of cases decided under the 1939 Code holds that if the third person's power is restricted by a definite external standard, so that the grantor could compel him to act when the contingency occurs, part or all of the trust corpus is subject to estate tax. Blunt v. Kelly, 131 F.2d 632 (3d Cir. 1942); Bankers Trust Co. v. Higgins, 136 F.2d 477 (2d Cir. 1943); Estate of Rosenwasser v. Commissioner, 5 T.C. 1043 (1945). These cases rest on §811(c) of the 1939 Code, requiring the inclusion in the gross estate of transfers intended to take effect in possession or enjoyment at or after the transferor's death, rather than on what is now §2038. (Supra p. 1143.) Would §2038 reach such transfers, on the ground that the grantor's power to compel the third person to distribute income or corpus to him when the contingency occurs is a power to "alter, amend, or revoke"? Remember that in Jennings v. Smith, supra page 1155, involving a cognate problem, the court held that a power exercisable only upon the occurrence of a stipulated event was not embraced by §2038 if the event had not occurred at the time of the decedent's death. If the power is exercisable in the grantor's favor, however, and he can compel its exercise, does he have an "interest" that is includible under §2033? If so, how is it to be valued? See United States National Bank v. United States, 188 F. Supp. 332 (D. Ore. 1960).

Consider the estate tax consequences of the transfer in Holtz's Estate v. Commissioner, supra page 1013. Is it possible that a transfer of this type would be subject to neither the gift tax nor the estate tax?

CAMP v. COMMISSIONER

195 F.2d 999 (1st Cir. 1952)

Before MAGRUDER, Chief Judge, and WOODBURY and HARTIGAN, Circuit Judges.

MAGRUDER, Chief Judge.

Frederic E. Camp petitions for review of a decision of the Tax Court entered November 7, 1950, holding that petitioner was deficient in his gift tax for the year 1937 in the amount of $55,737.08, and for the year 1943 in the amount of $1,839.99. Primarily, the issue relates to the year 1937; the Tax Court's determination as to 1937 resulted in an upward revision of the figure for taxpayer's net gifts for the years prior to 1943, and thus, as a mere matter of mathematical

computation, in a determination of a deficiency in taxpayer's gift tax liability for other gifts made by him in 1943.

The dispute centers about the effect of a transfer in trust made by the taxpayer in 1932, prior to the enactment of the Revenue Act of 1932, §501 of which imposed a tax on gifts. Petitioner insists that this transfer in trust was a completed gift of the whole corpus, so that the transaction in its entirety was outside the incidence of the gift tax subsequently enacted. The Tax Court has held, however, that there was no completed gift at all in 1932, because the donor reserved in the deed of trust full power to alter, amend, or revoke, in conjunction with his half brother, who, the court concluded, had no "substantial adverse interest" in the trust property; and that there was a completed gift of the whole of the corpus of the trust in 1937, when the trust instrument was amended so as to vest the power of further amendment or revocation in the donor in sole conjunction with the donor's wife, who had a life interest in the trust income.

We are unable to accept altogether either the taxpayer's argument or the conclusion of the Tax Court. This segment of tax law, as to when a transfer in trust is to be deemed a completed gift for purposes of the gift tax, has been in a somewhat cloudy state, as perhaps is evident from the fact that in the present case the Commissioner has taken several successive positions, each asserting a larger deficiency for the years in question.

The case was tried in the Tax Court upon a stipulation of facts, supplemented by a deposition by petitioner which was read into evidence.

On October 30, 1931, the taxpayer married Alida Donnell Milliken. No children have issued from this marriage; but at various dates within the period January 19, 1937, to October 3, 1942, taxpayer and his wife have adopted four children.

On February 1, 1932, taxpayer executed a trust indenture naming Bankers Trust Company of New York as trustee, and transferred to said trustee, as corpus of the trust, securities then having a fair market value of $416,131.72.

The trust instrument provided that the income should be payable to taxpayer's wife Alida during her life, and that upon her death the principal of the trust should be paid to the then living issue of the donor per stirpes; and in default of such issue, that the trustee should continue to hold the principal in trust, paying the income therefrom to Johnanna R. Bullock, mother of the donor, during her life, and upon her death, that the trustee should pay the principal of the trust fund unto H. Ridgely Bullock, half brother of the donor, or if he be then dead, unto the then living issue of said H. Ridgely Bullock per stirpes, or if there be none, to the trustees of Princeton University.

The tenth article of the trust indenture provided:

> This indenture shall not be subject to revocation, alteration or modification by the Donor, alone, but nevertheless, he may, in conjunction with either H. Ridgely Bullock or Johnanna R. Bullock, beneficiaries hereunder, during the continuance of this trust, by instrument, in writing, executed and acknowledged by the Donor and either the said H. Ridgely Bullock or the said Johnanna R. Bullock, . . . modify or alter in any manner, or revoke in whole or in part, this indenture and the trusts then existing, and the estates and interests in property hereby created. . . .

When the trust was thus created in February, 1932, taxpayer's wife Alida was 23 years of age, his mother Johnanna R. Bullock was 63, and his half brother H. Ridgely Bullock was 22.

On August 30, 1934, the taxpayer, in conjunction with Ridgely, exercised the power to alter or amend by inserting a provision that Alida, wife of the donor,

should receive the income of the trust only so long as she, during the donor's lifetime, should continue to be his wife and to reside with him.

On December 11, 1937, the taxpayer, in conjunction with Ridgely, exercised the amendatory power so as to provide that the term "issue of the Donor," as used in the trust instrument, should be deemed to include any child or children then or thereafter legally adopted by the donor and his said wife, and their issue. At the same time the trust instrument was further modified so as to strike out the above-quoted provision in the tenth article with reference to the power to alter, amend or revoke, and to substitute in lieu thereof a provision containing the same words except that the name of Alida Donnell Milliken Camp was substituted for the names of H. Ridgely Bullock and Johnanna R. Bullock. Thus, on and after December 11, 1937, taxpayer reserved the power to alter, amend or revoke the trust in sole conjunction with his wife Alida, who was entitled to all the income from the trust during her lifetime, with the qualification previously stated.

The fair market value of the corpus of the trust, as of December 11, 1937, was $518,089.76.

On June 6, 1946, the taxpayer, in conjunction with his wife Alida, further modified the trust instrument by striking out in its entirety the provision of the tenth article, as amended, dealing with the power to alter, amend or revoke, and substituting in lieu thereof an unqualified provision that the trust indenture "shall not be subject to revocation, alteration or modification."

Section 501(c) of the Revenue Act of 1932 contained the following specific provision:

> The tax shall not apply to a transfer of property in trust where the power to revest in the donor title to such property is vested in the donor, either alone or in conjunction with any person not having a substantial adverse interest in the disposition of such property or the income therefrom, but the relinquishment or termination of such power (other than by the donor's death) shall be considered to be a transfer by the donor by gift of the property subject to such power, and any payment of the income therefrom to a beneficiary other than the donor shall be considered to be a transfer by the donor of such income by gift.

This subsection was repealed in 1934, 48 Stat. 758, for the reason, as explained in the committee reports, that "the principle expressed in that section is now a fundamental part of the law by virtue of the Supreme Court's decision in the *Guggenheim* case [supra p. 1007]. . . ."

It is to be noted that the facts of the *Guggenheim* case were narrower than the situations specifically covered in §501(c), in that the Supreme Court was not passing upon the case where the donor did not reserve to himself alone the power of revocation, but vested such power in himself in conjunction with some other person who might or might not have had a substantial adverse interest in the disposition of the property or the income therefrom. However, the committee reports in 1934 expressed the view that this latter situation was covered in principle by the Supreme Court's decision in the *Guggenheim* case, and therefore recommended the repeal of §501(c) because it had become unnecessary and superfluous.

What, then, was this "principle" recognized in the *Guggenheim* case? We think it is to be found in the Court's opinion [supra p. 1009], that the gift tax was not aimed at every transfer of the legal title without consideration, which would include a transfer to trustees to hold for the use of the grantor, but was aimed, rather, "at transfers of the title that have the quality of a gift, and a gift is not consummate until put beyond recall."

Subsequent cases have elaborated upon this concept of a "gift," and have settled that a transfer in trust is incomplete as a gift, not only where the donor

reserves the power to revest the trust property in himself, but also where he reserves the power to alter the disposition of the property or the income therefrom in some way not beneficial to himself. Estate of Sanford v. Commissioner [supra p. 1150]; Rasquin v. Humphreys, 1939, 308 U.S. 54. See the discussion in Higgins v. Commissioner, 1 Cir., 1942, 129 F.2d 237.

Treasury Regulations [§25.2511-2] contain the following provisions, which we take to be declaratory of the intent of the Act and of the gloss which later cases have put upon the concept of a "gift" as expressed in Burnet v. Guggenheim:

(b) As to any property, or part thereof or interest therein, of which the donor has so parted with dominion and control as to leave in him no power to change its disposition, whether for his own benefit or for the benefit of another, the gift is complete. But if upon a transfer of property (whether in trust or otherwise) the donor reserves any power over its disposition, the gift may be wholly incomplete, or many be partially complete and partially incomplete, depending upon all the facts in the particular case. Accordingly, in every case of a transfer of property subject to a reserved power, the terms of the power must be examined and its scope determined. . . .

(c) A gift is incomplete in every instance in which a donor reserves the power to revest the beneficial title to the property in himself. A gift is also incomplete if and to the extent that a reserved power gives the donor the power to name new beneficiaries or to change the interests of the beneficiaries as between themselves unless the power is a fiduciary power limited by a fixed or ascertainable standard. . . .

(d) A gift is not considered incomplete, however, merely because the donor reserves the power to change the manner or time of enjoyment. . . .

(e) A donor is considered as himself having a power if it is exercisable by him in conjunction with any person not having a substantial adverse interest in the disposition of the transferred property or the income therefrom. A trustee, as such, is not a person having an adverse interest in the disposition of the trust property or its income.

(f) The relinquishment or termination of a power to change the beneficiaries of transferred property, occurring otherwise than by the death of the donor (the statute being confined to transfers by living donors), is regarded as the event which completes the gift and causes the tax to apply. . . .

Where a donor makes a transfer in trust for numerous beneficiaries, it is obvious that there may be several distinct gifts or potential gifts. For purposes of the gift tax, some of the interests created may be completed gifts, and others may not be, depending upon the facts of the particular case — as is stated in the first paragraph of the above quotation from [§25.2511-2] of the regulations.

From the foregoing, we think the following propositions are reasonably clear:

(1) If the trust instrument gives a designated beneficiary any interest in the corpus of the trust property or of the income therefrom, which is capable of monetary valution, and the donor reserves no power to withdraw that interest, in whole or in part, except with the consent of such designated beneficiary, then the gift of that particular interest will be deemed to be complete, for the purposes of the gift tax. See accord, our discussion in Commissioner v. Prouty, 1 Cir., 1940, 115 F.2d 331, 334, with reference to the annuities to the husband in Trusts 2 and 3. This is true, though at the time of the creation of the trust there might be extraneous considerations, whether of a pecuniary or sentimental nature, which would give the donor every confidence that such designated beneficiary would acquiesce in any future desire of the donor to withdraw the gift, in whole or in part. See Commissioner v. Prouty, supra at page 335-336.* In that respect the

* "Examining these intimate family trusts, one must recognize an element of unreality in the inquiry whether a beneficiary's interest is substantially adverse to the grantor. The supposition is that, given a sufficient stake in the trust, the beneficiary is not likely to yield to a wish of a grantor to revoke the trust. In many cases the grantor may have full confidence in the compliant disposition of the member of the family he selects to share his power of revocation, even though

donor is taken at his word; he has legally given away something which he cannot take back except with the consent of the donee. The transfer fulfills the concept of a completed gift, quite as much as if a husband makes an outright gift of securities to his wife, being confident that his wife would reconvey the securities to him if he ever asked for them. If there were an advance agreement between the donor and the donee, prior to the transfer in trust, to the effect that the donee would acquiesce in any future exercise of the power of modification proposed by the donor, then the situation would be different. The trust instrument would not express the true intention of the parties.† A real gift is not intended, where the purported donee has agreed ahead of time to hold the "gift" subject to the call and disposition of the purported donor.

(2) If the only power reserved by the donor is a power to revoke the entire trust instrument (not a power to modify the trust in any particular), and this power may be exercised only in conjunction with a designated beneficiary who is given a substantial adverse interest in the disposition of the trust property or the income therefrom, then the transfer in trust will be deemed to be a present gift of the entire corpus of the trust, for purposes of the gift tax. In such cases, the gift of the entire corpus will be deemed to have been "put beyond recall" by the donor himself.

(3) If the trust instrument reserves to the donor a general power to alter, amend or revoke, in whole or in part and this power is to be exercised only in conjunction with a designated beneficiary who has received an interest in the corpus or income capable of monetary valuation, then the transfer in trust will be deemed to be a completed gift, for purposes of the gift tax, only as to the interest of such designated beneficiary having a veto over the exercise of the power.[1] As to the interests of the other beneficiaries, the gifts will be deemed to be incomplete, for as to such interests the donor reserves the power to take them away in conjunction with a person who has no interest in the trust adverse to such withdrawal. The gifts to the other beneficiaries have not been "put beyond

---

such member is named as beneficiary of a handsome interest in the trust. The very fact that the grantor reserved a power to revoke indicates a mental reservation on his part as to the finality of the gift; and if the grantor wishes to hold on to a power of recapture, it stands to reason he will vest the veto power in someone whose acquiescence he can count on. Cf. Helvering v. City Bank Farmers Trust Co., 296 U.S. 85, 90. However, we cannot read into the gift tax, any more than into [§§676-677], the proposition that a member of the grantor's immediate family can never be deemed to have 'a substantial adverse interest.' So far as the gift tax is concerned, it is fair enough to take the grantor at his word. As to the income tax, it might be rational for Congress to tax all family income as a unit. But as the law now stands — both gift tax and income tax — we must give weight to the formal rights conferred in the trust instrument in determining whether a given beneficiary has a substantial adverse interest, bearing in mind the admonition of Helvering v. Clifford, 309 U.S. 331, 335, that 'where the grantor is the trustee and the beneficiaries are members of his family group, special scrutiny of the arrangement is necessary. . . .' " — Ed.

† For an application of this principle, see Publicker v. Miles, 48 A.F.T.R. 1968 (E.D. Pa. 1955), where the terms of a trust which would have been a taxable gift if taken at face value were disregarded on evidence that the trustee had agreed with the donor that the corpus would be returned to her on request and that a provision permitting the donor to revoke only with the consent of her husband was inserted by an attorney without the donor's knowledge and in violation of her intention. — Ed.

1 This proposition is subject to qualification in the rather unusual situation like that presented by Trust No. 1 in Commissioner v. Prouty, C.A. 1, 1940, 115 F.2d 331. There under the terms of the trust instrument, the grantor reserved a power to revoke or amend, with the written consent of her husband. Although the husband was not given the entire beneficial interest in the trust property, nevertheless he did have substantial interests, both in the disposition of the income and in the disposition of the corpus, which were adverse to any modification of the trust other than by way of augmenting the husband's interests. In these circumstances we held that there had been a completed gift of the entire corpus.

recall" by the donor; in such cases the regulation recognizes realistically that when the donor has reserved the power to withdraw any of the donated interests with the concurrence of some third person who has no interest in the trust adverse to such withdrawal, it is in substance the same as if the donor had reserved such power in himself alone. In further support of this proposition, see the discussion in Estate of Sanford v. Commissioner [supra p. 1150].

Coming back, then, to the terms of the trust which petitioner created in February, 1932: It is clear that there was not at that time a completed gift of the life income to petitioner's wife Alida. Under the original provisions of the trust indenture, this life estate was subject to revocation by the donor in conjunction either with the donor's half brother Ridgely or his mother Johnanna, neither of whose interests in the trust were adverse to the withdrawal of the life estate from Alida.

When the trust instrument was amended on December 11, 1937, so as to transfer to Alida alone the veto power over any further proposals by the donor for amendment of the trust, there was on that date a completed gift to Alida of the interest which she then held in the trust. It is stipulated that the value on December 11, 1937, of the income of a trust having a principal value of $518,089.76, payable during life of a woman of 29 (Alida's age), was $356,492.38. However, it is to be noted that Alida did not at this time hold an absolutely unqualified life interest in the income. By prior amendment, the indenture provided that the income of the trust was to be payable to Alida, wife of the donor, only "as long as she, during his lifetime, shall continue to be his wife and to reside with him." Whether, in the valuation of the gift to Alida on December 11, 1937, some allowance should be made for this qualification upon the life estate, we do not undertake to say. Cf. Robinette v. Helvering [infra p. 1227]. The Tax Court was in error, we think, in ruling that upon the execution of the amendment of December 11, 1937, petitioner made a taxable gift of the whole corpus of the trust, valued then at $518,089.76. There were at that time no completed gifts to the succeeding income beneficiaries and beneficiaries in remainder, for Alida's interest in the trust was not adverse to the donor's revocation of those succeeding interests by an exercise of the reserved power.

By the amendment of June 6, 1946, whereby all power to revoke, alter or modify the trust was eliminated, there resulted a taxable gift of the then value of the corpus, minus the sum determined to be the value of the gift to Alida on December 11, 1937, and minus also the values of any completed gifts which may be deemed to have been made at the time of the creation of the trust on February 1, 1932. This latter point we do not have to determine in the present case, because petitioner's liability for the year 1946 is not before us. In passing, we simply allude to a possible difficulty, in that the donor originally reserved a power to revoke or modify the trust in conjunction with either Ridgely or Johnanna. Ridgely's contingent remainder interest might have been revoked by the donor, in conjunction with Johnanna, whose interest in the trust was not adverse to such revocation. Johnanna's contingent life estate could have been revoked by the donor in conjunction with Ridgely, whose interest in the trust was not adverse to such revocation. Where the veto power is thus lodged in the alternative, it may be that, for purpose of the gift tax, there is not a completed gift to either of such beneficiaries. But cf. Estate of Leon N. Gillette, 1946, 7 T.C. 219; Commissioner v. Betts, 7 Cir., 1941, 123 F.2d 534.

The decision of the Tax Court is vacated, and the case is remanded to that court for further proceedings not inconsistent with this opinion.

NOTE

1. *"Subtantial adverse interest" and the happy family.* In *Camp* and *Prouty,* the court refused to accept the theory that a "substantial adverse interest" cannot exist within a happy family unit. The *Prouty* case also commented on a cognate problem: whether a trustee or other person whose consent is required to an amendment or other change in a trust has an adverse interest if his exercise of the power will adversely affect a member of *his* family:

> Another point was stressed by the Board of Tax Appeals in connection with Trusts Nos. 2 and 3, namely, that in each case the corpus at the death of Lewis, whose consent to change was required, was to go to his children. "It is natural to assume," said the Board, "that his desire and concern for the support, maintenance, and welfare of his children after his death would prompt him to resist any effort on the part of the grantor of the trust to alter, amend or revoke that part of the trust so as to revest in her title to such property." No doubt this is an interest of a sort. But we think the phrase "substantial adverse interest," as it was used in Section 501(c) of the Revenue Act of 1932 and as it is used in Sections 166 and 167 [1939 Code], means a direct legal or equitable interest in the trust property and not merely a sentimental or parental interest in seeing the trust fulfilled for the advantage of other beneficiaries. [115 F.2d 331, 335 (1st Cir. 1940).]

What if the beneficiaries whose enjoyment will be adversely affected by the trustee's action are his minor children, whom he is obligated to support? In Latta v. Commissioner, 212 F.2d 164 (3d Cir. 1954), cert. denied, 345 U.S. 825, the court held that the estranged husband of the settlor of a trust did not have a substantial adverse interest, although their minor children were the remaindermen. One judge dissented, with opinion.

For the income tax aspects of the "substantial adverse interest" problem, see Joseloff v. Commissioner, supra page 367. The term "substantial adverse interest" was taken by the gift tax regulations from §501(c) of the Revenue Act of 1932, as the *Camp* case points out, and this statute took it from the statutory provisions governing the grantor's *income* tax liability on the income of a revocable trust. The common use of the term thus effected a degree of co-ordination between the gift tax and the income tax, supra page 370. In 1954, the term "substantial adverse interest" was dropped from the income tax provisions and the concept of "adverse" and "non-adverse" parties was substituted. An "adverse party" is defined by §672(a) as a person "having a substantial beneficial interest in the trust which would be adversely affected by the exercise or non exercise of the power which he possesses respecting the trust." Apparently no substantive change in the law was intended. S. Rept., p. 365.

2. *Power of alteration vested solely in third person.* Except in circumstances similar to those in Holtz' Estate v. Commissioner, supra page 1013, a transfer is complete for gift tax purposes even though the interests of the beneficiaries can be reshuffled by a third person, if he is "neutral" and can act without the consent of the donor or a person having a substantial adverse interest. Regs. §25.2511-2(b); Higgins v. Commissioner, 129 F.2d 237 (1st Cir. 1942), cert. denied, 317 U.S. 658. Since no gift tax is imposed on a transfer if the grantor can revoke only with the consent of such a "neutral" person, however, why should a power vested solely in him be treated differently?

3. *Where the Decedent's Power Is to Modify a Transfer Made by Another*

NEWBERRY'S ESTATE v. COMMISSIONER

201 F.2d 874 (3d Cir. 1953)

Before GOODRICH, KALODNER and HASTIE, Circuit Judges.

HASTIE, Circuit Judge.

In these petitions for review the taxpayers complain that the Tax Court has

improperly applied to the estate of Myrtle H. Newberry, deceased, the provisions of [§2038(a)(2)], that the gross estate shall include any property interest which decedent may have transferred in trust, where at the time of his death, the enjoyment of that interest was subject to change through exercise by the decedent of a power to alter or revoke. It is admitted that the trusts in controversy gave the decedent until her death such power of alteration. But they were created by transfer of her husband's property under a trust indenture executed solely by him. Nevertheless, the Tax Court, upholding the Commissioner of Internal Revenue, has ruled that in the particular circumstances of this case the decedent may properly be regarded and taxed as the transferor of the trust property within the meaning of [§2038(a)(2)]. 17 T.C. 597.

In 1934 both John J. Newberry and his wife, Myrtle H. Newberry, were independently wealthy. Among other holdings, each owned about 50,000 shares of J. J. Newberry Company common stock, then valued at more than $50 per share. The Newberrys were deeply concerned for the future well being of their young children, a son and a daughter, neither of whom had independent means. In 1934 John Newberry created an irrevocable trust of 2500 shares of J. J. Newberry Company common stock for his daughter and a like trust for his son. In 1935 he repeated the process. In each trust he named himself and his wife as trustees and gave Mrs. Newberry alone broad power to alter, amend or terminate the trust, but in no event to revest principal or income in him. Before Mrs. Newberry's death in 1944, this power had been so limited by amendment of each instrument that no more could be done in its exercise than to shift interests among the Newberry issue, spouses of such issue and charities. Other amendments of the trusts were made from time to time but their provisions have no bearing upon this case.

On each occasion when Mr. Newberry executed one of these trusts Mrs. Newberry similarly executed a trust placing 2500 of her shares of J. J. Newberry Company common stock in trust for the same child. In each case she named herself and her husband as trustees and gave him the same powers of alteration as she was granted in the trusts created by him. Each time the husband amended the trusts he had created the wife made identical or equivalent changes in those she had created.

The Tax Court, in its findings of fact, had this to say about the circumstances under which these trusts were established:

> The idea of creating these trusts was first suggested to John J. Newberry by his brother, his business associate. After discussing the matter with his brother, John J. Newberry called in his attorney, with whom he discussed a plan that his brother had suggested. After John J. Newberry had the idea of creating the trusts "pretty well" fixed in his mind and shortly after he had first discussed it with his attorney he discussed it with his wife. He and she usually talked over matters as important as the trusts. They always handled the affairs of the family mutually. When decedent joined her husband and the attorney in the discussion she said that ". . . if it was a good thing to create these trusts, if John thought it was a good thing to create these trusts for the children, she did, too. She thought it was an excellent idea, and she wanted to do the same thing. She wanted to create the same type of trusts."
>
> He suggested the trust idea to her; she was interested right away and thought it was a good plan. Her purpose in creating her two 1935 trusts was the same as his. The decedent never gave any indication that she might not possibly execute the trusts. . . .
>
> The Newberry children at the time of the creation of the trusts in 1934 and 1935 had no independent means of their own. They were very young and the decedent and her husband did not know what kind of lifemates they might choose. They had a great interest in the children and wished to protect their interest.

In addition, Mr. Newberry was positive in his testimony, and it was in no way rebutted, that he would have created his trusts regardless of whether Mrs. New-

berry had decided upon a similar course. He also testified that the property placed in trust represented a small fraction of the wealth of each spouse and that neither of them contemplated any personal benefit or gain from corpus or income of any of the trusts.[1] Mr. Newberry testified further and the Tax Court found that powers to shift beneficial interests were incorporated in the trust indentures so as to make sure that no "schemers or ne'er-do-wells" should obtain control of the property in the unhappy event of an unfortunate marriage by either of the children for whose security the trusts were designed.

On this showing the Tax Court reached ultimate factual conclusions that in establishing, and from time to time amending, these trusts "the decedent and her husband were acting as a unit . . . and that the trust instruments were merely part of an interdependent arrangement whereby neither decedent nor her husband would lose control of the amount of the J. J. Newberry Company stock transferred to the trusts until they saw fit to do so." On this basis, the Tax Court ruled that Mrs. Newberry should be regarded as the settlor of the trusts created by her husband as well as the holder of a power to change the enjoyment of the trust estate. . . .

The narrow question is whether the Tax Court erred in treating Mrs. Newberry as the person who had "made a transfer" of this property in trust within the meaning of [§2038(a)(2)].

Normally taxing authorities and courts administering or applying a statute which taxes to a transferor's estate property he has transferred in trust reserving certain powers to himself have no occasion to go beyond the trust instrument in order to identify the transferor. At times, however, they have gone further. This procedure has been justified as necessary and proper to determine whether the significant shifting of economic interests and the change of dominion and control over property has been different from what the trust instrument itself indicates. And if such analysis shows that another than the formal settlor is in reality the transferor, his estate may be taxed accordingly.

The most obviously appropriate occasion for the application of the principle would be presented by a transaction in which one of the formal parties had been essentially a "straw" acting for someone else. Tax consequences, like many other legal and economic consequences of such a transaction, would attach to the real party in interest. A like result is clearly proper where, pursuant to a bargain and exchange, one party has given value to another to induce, and in consideration for, the creation of a trust by the second party wherein disposition is made of some beneficial interest as desired by the first party. Indeed, the taxing authorities need do no more than apply considered and accepted doctrine of the law of trusts to reach the conclusion that he who pays another for the creation of a trust wherein the payor shall be granted a beneficial interest or a power which he desires may be taxed as one who has transferred property retaining an interest therein. This doctrine has been recognized and applied in a line of cases beginning with Lehman v. Commissioner of Internal Revenue, 2 Cir., 1940, 109 F.2d 99. That leading case clearly turned upon the court's reasoning that "the transfer by the decedent's brother, having been paid for and brought about by the decedent, was in substance a 'transfer' by the decedent, and property so transferred formed part of his taxable estate by virtue of [§2038(a)(2)], to the extent that the decedent had power to 'alter, amend or revoke' the enjoyment of it." 109 F.2d at pages 100-101.

---

1 These were New Jersey trusts. Whether the trustee could have employed his power to shift beneficial interests for his own advantage is as a matter of law at least doubtful. . . . In any event it seems clear on the record that no such use of the power was intended or contemplated when the trusts were established. And it is agreed that amendments prior to decedent's death precluded any such use of the power.

It was also a fact in the *Lehman* case that the way the decedent, who was treated as transferor, had paid his brother for setting up the trust in question had been by setting up a similar trust conferring an equivalent benefit upon his brother. Thus, procedurally, the establishment of "reciprocal" or "crossed" trusts was a technical device for realizing the quid pro quo of a bargain.

The foregoing analysis is important because some of the subsequent cases which apply the *Lehman* doctrine have stressed the fact that trusts contained "reciprocal" or "crossed" provisions without spelling out that this circumstance is significant only to the extent that it may reveal a quid pro quo which another than the named grantor has paid for the creation of the trust in controversy. Actually, some of the cases seemed to go rather far in inferring such payment or consideration in connection with reciprocal or crossed provisions. But this court in In re Lueders' Estate, 3 Cir., 1947, 164 F.2d 128, has taken the lead in indicating that payment for the creation of a trust by another must be real if the alleged payor rather than the apparent settlor is to be treated as grantor of the trust. The essential picture which the crossed trusts must reveal to justify the result reached by the Tax Court in the present case is a declared grantor induced to establish a trust giving the party now to be treated for tax purposes as the grantor, a power which the latter has wanted and has paid for by setting up another trust to accomplish something desired by the declared grantor. Such in our view are the rather strict confines of the *Lehman* doctrine.

What the Tax Court found in this case, and what happened, if the undisputed testimony is to be believed, falls short of the foregoing requirements. The "unity" of action of husband and wife and the "interdependent" character of their transactions which the Tax Court found are not such circumstances as the *Lehman* doctrine comprehends. Spouses in mutual confidence and common interest work out together what each is going to do with his own money to provide for their children. In the normal case, which this appears to be, it is a distortion of meaning to say that the action of one spouse is a quid pro quo inducing the action of the other. The only "consideration" is the historic "consideration of love and affection" for the dependent members of one's family. Similarity of action occurs because each spouse is confident that they together have arrived at a wise and benevolent decision concerning the future welfare of their children. That is all there is to the "unity" and "interdependence" of action revealed by such a record as we have here. Neither the substance of the transaction nor the identity of the actor is revealed as any different from what appears on the face of each trust indenture.

We have also considered that in the present decision and one or two others, the Tax Court may well be treating as special cases to be governed by rules of construction peculiar to them family trusts so created that husband and wife by separately granting each other powers over the enjoyment of trust property achieve essentially the same controls as would have resulted from reserving powers. Undoubtedly, in this connection as in others, domestic privacy and informality may effectively conceal understandings made and honored between husband and wife at variance with the formal and apparent aspects of family financial transactions. A bargain and exchange, within the meaning of the *Lehman* doctrine may exist, yet be unprovable. Moreover, regardless of any such bargain, there may be policy considerations favorable to legislation which for particular tax purposes would treat these crossed trusts of spouses like a single joint transaction with both spouses pro tanto transferors of the property over which each will thereafter have certain control. But, absent such legislation, when on the facts the conclusion is inescapable that each spouse by a distinct and bona fide transaction has dispensed of his own separate estate in accordance with his own personal desires and without receiving a quid pro quo from the other, we

think a court cannot justifiably refuse to recognize each spouse as the real transferor of the trust he has formally created.

In the present case Mr. Newberry himself executed an operative indenture to transfer his own property in trust for the benefit of his children, pursuant to his personal desire to provide for their security. Of course, the total result of this transaction and the companion transaction of Mrs. Newberry, with each spouse granting a power to the other, could have been achieved by each spouse reserving a power in the trust he created. We have no doubt that the parties, advised by counsel, deliberately chose the alternative which appeared to entail the less burdensome tax consequences. But tax saving motivation does not justify the taxing authorities or the courts in nullifying, or disregarding, the taxpayer's otherwise proper and bona fide choice among courses of action. . . .

The decisions of the Tax Court will be reversed and the cases remanded for the entry of dispositive orders consistent with this opinion.

NOTE

1. *Reciprocal trusts.* In Hill's Estate v. Commissioner, 23 T.C. 588 (1954), transfers in the form of reciprocal trusts were held made in contemplation of death because a complicated form was employed to avoid estate taxation. By reason of a later judicial construction of the statute, had the transfers been made in the normal manner, estate taxes would not have been due!

See Rev. Rul. 56-397, 56-2 C.B. 599, ruling that the reciprocal transfer doctrine is not applicable to the common arrangement among partners or other business associates, by which each purchases insurance on the life of the other in order to meet his obligation under an agreement to buy out the interest of the first to die.

2. *Gift tax consequences of reciprocal trusts.* For the troublesome gift tax aspects of reciprocal trusts, see Commissioner v. McLean, 127 F.2d 942 (5th Cir. 1942); Commissioner v. Warner, 127 F.2d 913 (9th Cir. 1942).

3. *Identifying the transferor.* Aside from the reciprocal trust area, it is sometimes necessary to determine whether the decedent was the transferor of property if he gave it to someone else on condition that the latter place it in trust, or if the decedent placed property in trust after receiving it from another person. See First National Bank of Shreveport v. United States, 224 F. Supp. 747 (W.D. La. 1963), and cases there cited; State Street Trust Co. v. United States, infra page 1193.

4. *Reference.* Colgan and Molloy, Converse Trusts — The Rise and Fall of a Tax Avoidance Device, 3 Tax L. Rev. 271 (1948).

FEDERAL ESTATE AND GIFT TAXES: A PROPOSAL FOR INTEGRATION AND FOR CORRELATION WITH THE INCOME TAX

Joint Study of Advisory Committee to Treasury Department and Office of Tax Legislative Counsel 18-21 (1947)

It is proposed under this heading that a transfer shall be deemed incomplete and therefore not subject to transfer tax if the transferor, any other person, or both retain a power of revocation, alteration, amendment, or termination enabling a change in the beneficial disposition of the property or the income therefrom. The transfer is rendered complete when all such authority finally comes to an end. If the power ceases during life, the transfer tax is incurred in the calendar year in which such cessation occurs. But if the power is outstanding at the transferor's death, the transferred property is treated as part of his taxable estate at death. A power held solely by another person, however, does not render a transfer incomplete if such person is authorized to vest the property in himself as well as others. In a similar connection, a power to change the beneficial dis-

position of the property does not postpone the completion of the transfer if such power is exercisable solely by will by a person other than the transferor. Finally, a transfer is deemed complete even though the transferor or others have power (*a*) to distribute or apply income to or for a current income beneficiary or to accumulate it for him; (*b*) to apply principal to or for the benefit of the income beneficiary of such portion; or (*c*) to effect a combination of these results.

The precise scope of the foregoing recommendation may be more easily appraised by comparing it with the existing gift- and estate-tax rules. At present a transfer is incomplete for gift-tax purposes if the transferor, either alone or in conjunction with a person lacking a substantial adverse interest, is empowered to revoke the transfer, to designate new beneficiaries, or to alter the relative interests of the named beneficiaries. See Reg. [§25.2511-2]; Burnet v. Guggenheim [supra p. 1007]; Estate of Sanford v. Comm. [supra p. 1150]. On the other hand, if such a power over beneficial enjoyment is held by the transferor in conjunction with a person having a substantial interest adverse to another disposition, or is held solely by a person other than the transferor, the transfer constitutes a completed gift. See Comm. v. Prouty, 115 F.(2d) 331 (C.C.A.1st, 1940); Higgins v. Comm., 129 F.(2d) 237, 242 (C.C.A.1st, 1942) cert. den. 317 U.S. 658 (1942). Insofar as the estate tax is concerned, a transfer is taxable at death if the transferor alone or in conjunction with any person is authorized to change the enjoyment of the property through the exercise of a power to alter, amend, revoke or terminate. If the power is held solely by a person other than the transferor, the property subject to the power is not includible in the transferor's gross estate, unless a power to revest the property in him is exercisable in accordance with some standard enforceable in a court of equity, and not as the donee may freely determine. Compare Blunt v. Kelly, 131 F.(2d) 632 (C.C.A.3d, 1942), with Comm. v. Irving Trust Co., 147 F.(2d), 946 (C.C.A.2d, 1945). Cf. the somewhat intermediate position in Bankers Trust Co. v. Higgins, 136 F.(2d) 477 (C.C.A.2d, 1943).

If the gift tax rules are placed alongside those proposed under the integrated transfer tax, it is evident that the line in certain instances has been moved over so that transfers which would now be deemed completed gifts would be considered incomplete under the proposed transfer tax. This shift is caused primarily by two factors. First, the proposed revision drops the substantial adverse interest concept which is not a significant element in the determination of gift tax liability, inasmuch as this concept is not responsive to the actual controls retained by a transferor through familial and financial ties. Since the substantial adverse interest concept was eliminated from the estate tax law in 1924, the proposed transfer tax and the estate tax are thus identical in their treatment of a power held by the transferor alone or in conjunction with any other person.

Secondly, the proposed revision eliminates the distinction between a power held by the transferor in conjunction with another person and a power held solely by the other person. The present distinction assumes that a transferor exerts more influence upon another person as co-holder of a power rather than as transferor. As Congress has recognized since 1932 in connection with the income tax, however, any such distinction is unjustifiable and is self-defeating if avoidance is to be justly dealt with. . . . Accordingly, where the power to change the beneficial disposition of the property resides solely in a person other than the transferor, the integrated transfer tax seeks to establish a clear-cut rule that such a power postpones the completion of the transfer until death unless the power is relinquished at an earlier date.

The validity of the recommended rule seems beyond all reasonable doubt in view of Helvering v. City Bank Farmers Trust Company [supra p. 1158]. According to this decision, Congress may regard a transfer as incomplete if the transferor

retains a power to revise his disposition in conjunction with another person, including a beneficiary. Congress is free to assume that a beneficiary "of the grantor's immediate family might be amenable to persuasion" and that a grantor who desires to retain full dominion over the property will join with him in the exercise of his power someone who he believes "would comply with his wishes." Although the *City Bank* decision dealt with a power of which the transferor was a formal co-holder, its rationale is not predicated upon this technical factor. If amenability to the transferor's persuasion is the dominant criterion, amenability is little affected by presence or absence of the transferor as a co-holder of the power. It is the ability to exert control and the creation of means for doing so which are determinative.

While continued dominion and control may be manifested through others, a point is reached where it is fair to conclude that they have generally come to an end. Hence it is provided that if a person other than the transferor is free to vest the property in himself, the transfer is complete. Such a transfer is not appreciably different from one which directly vests outright ownership in the other person. It is further provided that if a power in another person to change the beneficial enjoyment of the property may be exercised only by will, the transfer is equally complete. Admittedly, a donee of a testamentary power may be amenable to persuasion to such an extent that he will revest the property in the transferor or his estate. But such a power, when held by another, is not, as a rule, a ready means of assuring a continuing dominion in the transferor. In addition, the attribution of another person's testamentary power to the transferor would severely cripple the taxability of powers of appointment which are deemed the equivalent of ownership in the donee for tax purposes.

The recommendation also provides that certain powers, which allow for a limited type of shifting in beneficial enjoyment, shall not render the transfer incomplete. Thus, the transferor will be required to pay a transfer tax at the time of transfer, and will thereafter be relieved from tax on the income from the transferred property, where he or another person has the power to distribute income to or for the benefit of a current income beneficiary or to accumulate it for future distribution to him. . . . [I]t is true that if distribution of income is withheld and the current income beneficiary of a trust dies prior to the expiration of the trust, the accumulations may ultimately pass to an alternate taker. Such a power of accumulation, however, is very limited in scope since its operation as a method of adjusting beneficial enjoyment depends upon the untimely death of the current income beneficiary. It is also provided that a transfer shall be deemed complete despite a power in the transferor or another person to pay over any portion of the principal to the current income beneficiary of such portion. Such a power of invasion undoubtedly permits continuation of dominion over the transferred property. It is believed, however, that transferors should not be entirely precluded from attempting to meet the needs of changing circumstances, such as a sudden emergency which requires immediate invasion of principal to assist the current income beneficiary. This consideration, it is felt, warrants the creation of a distinction between a limited power to invade and other powers to shift beneficial enjoyment.

NOTE

For other proposals looking toward a coordination of the income, estate, and gift taxes on inter vivos transfers, see American Law Institute, Federal Income, Estate and Gift Tax Statute (Tent. Draft No. 10, 1955) 175-216.

Section C. Transfers with Retained Life Estate: §2036

Development of "intended to take effect in possession or enjoyment at death" provision. From its enactment in 1916 until the adoption of the 1954 Code, the federal estate tax reached transfers "intended to take effect in possession or enjoyment at or after [the transferor's] death." It has already been noted (supra p. 1143) that from 1916 to 1924 revocable trusts were included in the gross estate by virtue of this statutory provision, and that in 1924 the predecessor of §2038 was enacted to deal in a more explicit fashion with transfers under which the transferor retained the right to alter, amend, or revoke. Thereafter, despite an overlapping area, the taxability of transfers of this type was primarily governed by the explicit statutory language of §2038 as modified from time to time, rather than by the more vague standard of the "postponed-possession-or-enjoyment" clause. The scope of §2038 is studied in Section B of this chapter.

A second type of transfer that was originally tested by the "postponed-possession-or-enjoyment" clause was the gift of property with a reservation by the donor of the right to receive or to control the income. In 1931, however, this type of disposition also received explicit statutory recognition. The governing statute is now §2036.

A third type of transfer that was formerly subject to the "postponed-possession-or-enjoyment" clause was a gift of property that might revert to the transferor's estate at or after his death. The statute was amended in time to deal specifically with this type of transfer too, but this did not occur until 1949. The current version of the 1949 legislation is §2037.

This development of a progressively more detailed statute culminated, in 1954, in the elimination of the original postponed-possession-or-enjoyment clause.* But the current provisions can hardly be understood without a few words of history.

Original understanding of "postponed-possession-or-enjoyment" clause. In 1916, when the postponed-possession-or-enjoyment clause was enacted, it was apparently generally believed that it brought into the gross estate property that had been transferred by the decedent during his lifetime if he reserved to himself the income from the property. The pre-1916 understanding of the clause has been described by the Supreme Court in Commissioner v. Estate of Church, 335 U.S. 632, 637-638 (1949), as follows:

> The "possession or enjoyment" provision . . . seems to have originated in a Pennsylvania inheritance tax law in 1826. Leighton, "Origin of the Phrase, 'Intended To Take Effect in Possession or Enjoyment At or After . . . Death' (§811(c), Internal Revenue Code)," 56 Yale L.J. 176 (1946). As early as 1884 the Supreme Court of

* In 1942, Paul complained: "We have been like Englishmen who never clean their slates; no language could be thrown away if anyone thought in optimistic vein that he understood its meaning. Amendments consisted of addition, duplication and overlapping. No one suggested the heroic remedy of fresh language which would clear away the debris and say simply what was plainly dictated by disillusioning experience with a statute that had repeatedly failed to say what the Treasury, at least, thought it meant. It was easier to repair at damaged points in a makeshift way, always hoping for a dim best. Some day we shall learn that sound revenue laws are not made in such a piecemeal way, and that postponing such important tax problems may be an expensive luxury." Paul, Federal Estate and Gift Taxation (1942) §7.01.

In the years that have followed Mr. Paul's complaint, the process of shoring up, rather than rebuilding, the structure has continued; and even the 1954 elimination of the original "postponed-possession-or-enjoyment" clause falls short of the "heroic remedy of fresh language" that he urged, since a truncated version was retained, albeit for a limited purpose, in §2036(a)(1) and §2037(a)(1).

Pennsylvania held that where a legal transfer of property was made which carried with it a right of possession with a reservation by the grantor of income and profits from the property for his life, the transfer was not intended to take effect in enjoyment until the grantor's death: "One certainly cannot be considered, as in the actual enjoyment of an estate, who has no right to the profits or incomes arising or accruing therefrom." Reish, Adm'r v. Commonwealth, 106 Pa. 521, 526. That court further held that the "possession or enjoyment" clause did not involve a mere technical question of title, but that the law imposed the death tax unless one had parted during his life with his possession and his title and his enjoyment. It was further held in that case that the test of "intended" was not a subjective one, that the question was not what the parties intended to do, but what the transaction actually effected as to title, possession and enjoyment.

Most of the states have included the Pennsylvania-originated "possession or enjoyment" clause in death tax statutes, and with what appears to be complete unanimity, they have up to this day [1949] substantially agreed with this 1884 Pennsylvania Supreme Court interpretation. Congress used the "possession or enjoyment" clause in death tax legislation in 1862, 1864, and 1898. . . . In referring to the provision in the 1898 Act, this Court said that it made "the liability for taxation depend, not upon the mere vesting in a technical sense of title to the gift, but upon the actual possession or enjoyment thereof." Vanderbilt v. Eidman, 196 U.S. 480, 493. And five years before the 1916 estate tax statute incorporated the "possession or enjoyment" clause to frustrate estate tax evasions, this Court had affirmed a judgment of the New York Court of Appeals sustaining the constitutionality of its state inheritance tax in an opinion which said: "It is true that an ingenious mind may devise other means of avoiding an inheritance tax, but the one commonly used is a transfer with reservation of a life estate." Matter of Keeney, 194 N.Y. 281, 287; Keeney v. New York, 222 U.S. 525.

See also Vanderlip v. Commissioner, 155 F.2d 152 (2d Cir. 1946), cert. denied, 329 U.S. 728, where Judge L. Hand said that such a transfer "is as nearly the substitute for a bequest as it can be and still remain a gift at all," hinting that the reservation of income from transferred property might ipso facto stamp the transfer as a gift in contemplation of death.

Treasury practice from 1916 to 1930 accorded with the interpretation of the postponed-possession-or-enjoyment clause described above. See Commissioner v. Estate of Church, supra, 335 U.S. at 639.

The "bombshell" of 1930: May v. Heiner. In 1930, however, the Supreme Court rejected this construction of the clause in May v. Heiner, 281 U.S. 238 (1930). The decedent in this case had transferred property in trust in 1917 to pay the income to her husband for his life and to her for her life if she survived him; upon the survivor's death, the trust was to terminate and the property was to be distributed to her children. The record did not disclose whether she had survived her husband, so as to come into present enjoyment of the income, or not; but the Court thought this was not relevant. Holding that the trust property was not part of the decedent-settlor's gross estate, the Court said:

> [The transfer in 1917] was not testamentary in character and was beyond recall by the decedent. At the death of Mrs. May no interest in the property held under the trust deed passed from her to the living; title thereto had been definitely fixed by the trust deed. The interest therein which she possessed immediately prior to her death was obliterated by that event. [281 U.S. at 243.]

After May v. Heiner was decided, there remained for the Treasury the hope that it could be confined to its own peculiar facts: the decedent had retained a contingent, or secondary, life estate, rather than a primary one. The next year, this hope was dashed when the Supreme Court decided Burnet v. Northern Trust Co., 283 U.S. 782 (1931), involving a trust under which the settlor retained a life

interest in the income, without the intervention of an intermediate life tenant. The Court said, per curiam:

> The question in this case is that of the construction of §402(c) of the Revenue Act of 1921, a provision similar to that of §402(c) of the Revenue Act of 1918, which has already been construed by this Court, and, in this view, there being no question of the constitutional authority of the Congress to impose prospectively a tax with respect to transfers or trusts of the sort here involved, the judgment of the Circuit Court of Appeals for the Seventh Circuit is affirmed upon the authority of May v. Heiner. . . . [283 U.S. at 784.]

The Joint Resolution of March 3, 1931. There was a dramatic climax to Burnet v. Northern Trust Co. and to two companion cases decided at the same time:

> March 3, 1931, the next day after the three per curiam opinions were rendered, Acting Secretary of the Treasury Ogden Mills wrote a letter to the Speaker of the House explaining the holdings in May v. Heiner and the three cases decided the day before. He pointed out the disastrous effects they would have on the estate tax law and urged that Congress "in order to prevent tax evasion," immediately "correct this situation" brought about by May v. Heiner and the other cases. He expressed fear that without such action the Government would suffer "a loss in excess of one-third of the revenue derived from the federal estate tax, with anticipated refunds in excess of $25,000,000." The Secretary's surprise at the decisions and his apprehensions as to their tax evasion consequences were repeated on the floor of the House and Senate. Senator Smoot, Chairman of the Senate Finance Committee, said on the floor of the Senate that this judicial interpretation of the statute "came almost like a bombshell, because nobody ever anticipated such a decision." * Both houses of Congress unanimously passed and the President signed the requested resolution that same day. [Commissioner v. Estate of Church, 335 U.S. at 639-640.]

Because Congress was scheduled to adjourn the following day, the resolution was adopted under a suspension of the rules and without having been printed, in reliance upon statements from the floor.

The Joint Resolution of March 3, 1931, enacted in such haste, provided for the inclusion in the gross estate of transferred property if the transferor retained for his life or any period not ending before his death (1) the possession or enjoyment of, or the income from, the property, or (2) the right to designate the persons who should possess or enjoy the property or the income therefrom.

In 1932, this provision was amended so as to give it the form now found in §2036(a), supra page 1177. The 1932 amendment was explained by the House Committee on Ways and Means:

> The purpose of this amendment . . . is to clarify in certain respects the amendments made to that section by the joint resolution of March 3, 1931, which were adopted to render taxable a transfer under which the decedent reserved the income for his life. The joint resolution was designed to avoid the effect of decisions of the Supreme Court holding such a transfer not taxable if irrevocable and not made in contemplation of death. Certain new matter has also been added, which is without retroactive effect.
>
> The changes are:
>
> (1) The insertion of the words "or for any period not ascertainable without reference to his death," is to reach, for example, a transfer where decedent reserved to himself semiannual payments of the income of a trust which he had established, but with the provision that no part of the trust income between the last semiannual payment to him and his death should be paid to him or his estate, or where he reserves the income, not necessarily for the remainder of his life, but for a period in the ascertainment of which the date of his death was a necessary element.

* It has been suggested that this was hyperbole. Pavenstedt, Congress Deactivates Another Bombshell: The Mitigation of Church and Spiegel, 5 Tax L. Rev. 309 n.155 (1950). — Ed.

(2) The insertion of the words "or for any period which does not in fact end before his death," which is to reach, for example, a transfer where decedent, 70 years old, reserves the income for an extended term of years and dies during the term, or where he is to have the income from and after the death of another person until his own death, and such other person predeceases him. This is a clarifying change and does not represent new matter.

(3) The insertion of the words "the right to the income" in place of the words "the income" is designed to reach a case where decedent had the right to the income, though he did not actually receive it. This is also a clarifying change.

(4) The insertion of the words "either alone or in conjunction with any person" is to reach a case where decedent had a right, with the concurrence of another person or persons, to designate those who should possess or enjoy the property or the income therefrom. [1939-1 C.B. (Part 2) 490-491.]

Section 2036(b), it will be noted, provides that transfers made between March 3, 1931, and June 7, 1932, are to be governed by the Joint Resolution of March 3, 1931, rather than by the amended provision enacted in 1932.

Although the Supreme Court in Burnet v. Northern Trust Co. had taken the unusual step of advising that there was "no question of the constitutional authority of the Congress to impose prospectively a tax with respect to transfers of trusts of the sort here involved," the constitutionality of the Joint Resolution of March 3, 1931, was challenged by a taxpayer in Helvering v. Bullard, 303 U.S. 297 (1938). The Supreme Court did not retreat:

The contention is that the transfer was inter vivos, was presently effective, was irrevocable, was not made in contemplation of, or effective at, death, and that Congress was, therefore, without power to make it the subject of an estate or inheritance tax; that, while the transfer might, by appropriate legislation, have been taxed as a gift, to tax it as in the nature of a testamentary disposition is a denial of due process. The contention is unsound for several reasons. Since Congress may lay an excise upon gifts it is of no significance that the exaction is denominated an estate tax or is found in a statute purporting to levy an estate tax. Moreover, Congress having the right to classify gifts of different sorts might impose an excise at one rate upon a gift without reservation of a life estate and at another rate upon a gift with such reservation. Such a classification would not be arbitrary or unreasonable. A further vindication of the exaction is the authority of Congress to treat as testamentary, transfers with reservation of a power or an interest in the donor. The legislative history of the Joint Resolution . . . demonstrates that the purpose of the legislation was to prevent avoidance of estate taxes. As has been said by the Court of Appeals of New York: "It is true that an ingenious mind may devise other means of avoiding an inheritance tax, but the one commonly used is a transfer with reservation of a life estate." In the Matter of Keeney, 194 N.Y. 281, 287; 87 N.E. 428; affirmed 222 U.S. 525.

We have recently sustained the prospective operation of a provision including in the gross estate property which a decedent has transferred retaining power alone, or in conjunction with any other person, to alter, amend, or revoke. [Helvering v. City Bank Farmers T. Co., supra p. 1158]. We held the purpose of the clause was to prevent avoidance of tax and the measure was reasonably calculated to that end. As applied to a trust created after its enactment the Joint Resolution does not violate the Fifth Amendment. [303 U.S. at 302.]

As the last sentence of the extract from the opinion in the *Bullard* case suggests, the case concerned a trust created after the enactment of the Joint Resolution. On the same day that the *Bullard* case was decided, the Supreme Court held that the Joint Resolution of March 3, 1931, and the 1932 amendment thereof were both intended by Congress to be prospective only. Hassett v. Welch, 303 U.S. 303 (1938).

The Hallock and Church cases. For a few years after 1938, it was widely assumed that pre-1931 transfers were immune from estate tax, even though the

transferor retained a life estate. In 1940, however, the Supreme Court decided Helvering v. Hallock, infra page 1213, which, while it did not pass on the status of pre-1931 life estates, led some judges and commentators to believe that May v. Heiner had been repudiated by implication. In 1948, speculation increased when the Supreme Court ordered a reargument in Commissioner v. Estate of Church, involving a pre-1931 trust with retained life estate. The Treasury had originally contended that the trust was part of the decedent's gross estate, not because of the retained life estate, but because in its view the settlor possessed until his death a reversionary interest in the corpus,* and the case had been argued before the Supreme Court in 1947 on this theory. Reargument of this and another case was ordered in 1948, and counsel were "requested to discuss particularly" a number of questions, several of which were directed to the status of pre-1931 life estates. 68 S. Ct. 1522, 1524 (1947). On reargument, the Treasury again suggested that the *Church* case could be decided upon narrow grounds, without overruling May v. Heiner, but it also argued that that case should be explicitly overruled. The Court, by a divided vote, did so:

> Crucial to the court's holding in May v. Heiner was its finding that no interest in the corpus passed at the settlor's death because legal title had passed from the settlor irrevocably when the trust was executed; for this reason the grantor's reservation of the trust income for his life — one of the chief bundle-of-ownership interests — was held not to bring the transfer within the category of transfers "intended to take effect in . . . enjoyment at . . . his death." This Court had never before so limited the possession or enjoyment section. Thus was formal legal title rather than the substance of a transaction made the sole test of taxability under §811 (c) [1939 Code]. For from the viewpoint of the grantor the significant effect of this transaction was his continued enjoyment and retention of the income until his death; the important consequence to the remaindermen was the postponement of their right to this enjoyment of the income until the grantor's death.
>
> The effect of the court's interpretation of this estate tax section was to permit a person to relieve his estate from the tax by conveying its legal title to trustees whom he selected, with an agreement that they manage the estate during his life, pay to him all income and profits from the property during his life, and deliver it to his chosen beneficiaries at death. Preparation of papers to defeat an estate tax thus became an easy chore for one skilled in the "various niceties of the art of conveyancing." Klein v. United States, 283 U.S. 231, 234. And by this simple method one could, despite the "possession or enjoyment" clause, retain and enjoy all the fruits of his property during life and direct its distribution at death, free from taxes that others less skilled in tax technique would have to pay. Regardless of these facts, May v. Heiner held that such an instrument preserving the beneficial use of one's property during life and providing for its distribution and delivery at death was "not testamentary in character." [335 U.S. 632, 640-641 (1949).]

There were forceful dissents by Justices Burton, Reed, and Frankfurter, resting mainly on the doctrine of stare decisis and the theory that Congress had impliedly accepted May v. Heiner in 1931 and 1932 by overruling it only prospectively.

The statutory aftermath of the Church case. The *Church* case has not had a happy life. Eight months after it was decided, the Treasury Department issued new regulations, announcing that the case would be applied only to the estates of decedents dying after the date of the decision, presumably on the theory that settlors who died before the *Church* case was decided had relied on the vitality of May v. Heiner and would have surrendered their life estates had they anticipated that it would be overruled. A month later, Congress went further. It enacted

* The principles governing the estate tax status of reversionary interests are examined infra page 1209.

the Technical Changes Act of 1949, overruling the *Church* case for settlors dying before January 1, 1950. Settlors still alive were allowed to release or assign their life estates free of gift tax without having the transfer treated as a gift in contemplation of death. Was such "relief" justified? See Bittker, Church and Spiegel, The Legislative Sequel, 59 Yale L.J. 395, 414-418 (1950); Pavenstedt, Congress Deactivates Another Bombshell: The Mitigation of Church and Spiegel, 5 Tax L. Rev. 309 (1950). The 1949 legislation was only the first step. By the Revenue Act of 1950, the terminal date set in the 1949 Act was advanced to January 1, 1951. Finally, in 1953, Congress overruled the *Church* case as to all pre-1931 transfers, regardless of the date of the transferor's death, in response to a recommendation of the House Ways and Means Committee that "the effect of the *Church* decision should be eliminated in all cases to which it was applicable." H.R. Rept. No. 894, 83d Cong., 1st Sess., 1953-2 C.B. 508, 513. The 1953 legislation is embodied in §2036(b), which reflects a return, perhaps more than temporarily, to the status as of 1938, when it was held in Hassett v. Welch that the 1931 and 1932 legislation was prospective only, and when the rule of May v. Heiner controlled pre-1931 transfers.*

ESTATE OF BERGAN v. COMMISSIONER

1 T.C. 543 (1943)

Margaret L. Goggin and the decedent, Sarah A. Bergan, were sisters. The decedent died in 1939. Kate A. Johnson, a third sister, died intestate December 6, 1932, leaving an estate of approximately $500,000, and her only distributees were her two above named sisters. Shortly after Mrs. Johnson's death, Miss Bergan, who was then 74 but in good health, approached Mrs. Goggin, who was five years younger, with the proposition that Mrs. Goggin was to take all of Mrs. Johnson's estate, except $50,000 in bonds which were to be transferred to Miss Bergan, and that there was to be an oral understanding between the two that Miss Bergan would live with Mrs. Goggin for the remainder of Miss Bergan's life and that Mrs. Goggin was to defray all of the living expenses. That proposition was agreed upon by both sisters and was fully executed. The respondent determined that Miss Bergan in 1933 made a transfer of her share of Mrs. Johnson's estate in excess of the $50,000 of bonds, which excess the respondent has determined was subject to both the gift tax and the estate tax. Petitioner by appropriate assignments of error has contested these determinations.

BLACK, Judge: . . .

Is this transfer† of Miss Bergan's share of Mrs. Johnson's estate in excess of the $50,000 block of bonds includible in Miss Bergan's gross estate under [§2036(a)] of the Internal Revenue Code?

We have found as a fact that the transfer was not made in contemplation of death. Cf. United States v. Wells, 283 U.S. 102. Not any of the evidence points in that direction. At the time the transfer was made Miss Bergan was in excellent health for a woman of her age. Her motives for the transfer were that she did not want to be bothered with looking after that much property, but she did

* For problems in determining whether a trust was created before or after 1931 or 1932, for the purpose of applying §2036(b), see Canfield's Estate v. Commissioner, 306 F.2d 1 (2d Cir. 1962); Lowndes and Kramer, Federal Estate and Gift Taxes (2d ed. 1962) §8.5.

If property is added after 1931 to a pre-1931 trust, the additions do not share the immunity of the original property. Pearson v. Commissioner, 36 B.T.A. 5 (1937); Estate of Curie v. Commissioner, 4 T.C. 1175, 1181-1182 (1945).

† It was asserted by the estate that Miss Bergan had "renounced" her interest in Mrs. Johnson's estate, and that a renunciation is not a "transfer" of property under the estate or gift tax statutes. See Brown v. Routzahn, infra page 1270. In an omitted part of the opinion, however, the court held that Miss Bergan's action constituted a "transfer" for tax purposes. — ED.

want to be supported for the remainder of her life and to retain the $50,000 so she would have enough income of her own to make gifts to her church and to charity. She had never owned much property and from the year 1904 she had never paid her living expenses. In other words, she wanted things to go on just about as they had been going, and in the making for [sic] such an arrangement the thought of death was not the impelling cause of the transfer. The transfer was not testamentary in character. All the facts, we think, tend to show that the transfer was associated with life rather than death.

Nor was the transfer intended to take effect in possession or enjoyment at or after Miss Bergan's death. It was intended to take effect and did take effect immediately. Upon the completion of the transfer in 1933, the title vested in Mrs. Goggin, who was then free to use or dispose of the property in any way she desired. The transfer, although made in consideration for support, was unconditional and irrevocable. Miss Bergan could not possibly retrieve the property transferred or any part of it, and Mrs. Goggin could have disposed of all of it immediately if she had so desired.

The respondent strongly contends that in substance Miss Bergan retained for her life the right to the income from the property transferred, and that for this reason the property must be included in Miss Bergan's gross estate under [§2036(a)]. In this connection the respondent points out that the living expenses of Miss Bergan, Mrs. Goggin and her two adult sons, all of which were paid by Mrs. Goggin, were between $25,000 and $30,000 a year, and that, if it took $7,500 a year for Mrs. Goggin to support Miss Bergan, the income from the property transferred (1933 agreed value, $133,662.37) would hardly be sufficient. From this the respondent argues that the result of the agreement between the two sisters was in substance the same as if Miss Bergan had transferred the property in trust with instructions to pay her the income therefrom for life and upon her death to deliver the principal to Mrs. Goggin, citing Tips v. Bass, 21 F.2d 460 (W.D. Tex. 1927), and Updike v. Commissioner, 88 F.2d 807 (8th Cir. 1937), cert. den. 301 U.S. 708.

We think these cases are distinguishable from the instant estate tax proceeding. In both these cases relied upon by the respondent actual trusts were created to secure the annuities, whereas no trust was created in the instant proceeding. Mrs. Goggin was free to use the property transferred to her in any way that she pleased. The title was vested in Mrs. Goggin and not in any trustee. Miss Bergan did not reserve to herself the income from the property transferred. She had entered into a contract with her sister for support and transferred the property in question as consideration for the contract. In the *Tips* case the Government conceded that the real property transferred of the value of $86,000, which was not placed in trust, was not includible in the gross estate. Although the entire property in the *Updike* case was not placed in trust, the entire transfer in that case was made in contemplation of death, a fact which clearly distinguishes that case from the instant proceeding. In other words, the property transferred in the *Updike* case was included in the gross estate because the transfer was made in contemplation of death and not because the decedent there had in effect reserved to himself for life the income from the property transferred. . . . The *Updike* case is therefore not controlling. . . . On this issue we sustain petitioner.

We shall now consider the question whether any part of Miss Bergan's share of Mrs. Johnson's estate in excess of the $50,000 block of bonds is taxable as a gift made in 1933. . . .

In deciding the estate tax question we held that Miss Bergan made a "transfer" during the year 1933 of her share of Mrs. Johnson's estate in excess of the $50,000 block of bonds in consideration for Mrs. Goggin's promise to support Miss Bergan

for the remainder of Miss Bergan's life. The parties agree that in 1933 the value of the property thus transferred by Miss Bergan was the amount of $133,662.37. Petitioner contends that the transfer was for an adequate and full consideration in money or money's worth and that there was, therefore, no gift. In the alternative, petitioner contends that if the transfer was for less than an adequate and full consideration, the minimum value of such consideration . . . would be $38,880.15, and that only the difference between $133,662.37 and $38,880.15 should be deemed a gift under [§2512(b)]. The respondent contends that the transfer was for less than an adequate and full consideration; that petitioner has failed to prove the value of the consideration, namely, Mrs. Goggin's promise to support Miss Bergan for the remainder of Miss Bergan's life; and that, therefore, the entire value of the property transferred ($133,662.37) should be deemed a gift under [§2512(b)].

The Committee on Ways and Means, in its report accompanying the Revenue Bill of 1932, referred to [§2512(b)] as follows:

> Since the tax is designed to reach all transfers to the extent that they are donative, and to exclude any consideration not reducible to money or money's worth, it is provided in this section that where the transfer is made for less than an adequate and full consideration in money or money's worth, the excess in value of the property transferred over such consideration shall be deemed a gift. For example, if A sells property worth $10,000 to B for $1,000, there is a gift of $9,000. (Cumulative Bulletin 1939-1, Part 2, p. 477.)

. . . In the instant gift tax proceeding there was a valid consideration for the transfer in question, namely, Mrs. Goggin's promise to support Miss Bergan for the remainder of Miss Bergan's life, but it was less than an adequate and full consideration for the property which was transferred. Is that consideration reducible to a money value? We think it is. Mrs. Goggin was to support Miss Bergan according to the standard then being enjoyed by the four adults which was at a cost of between $25,000 and $30,000 a year, or an average of between $6,250 and $7,500 for each adult. We adopt the lower figure in view of the insufficiency of the evidence to adequately establish a higher figure than that. We think such a consideration may be valued in the same way that an annuity of $6,250 for Miss Bergan's life would be valued. At the time of the transfer in 1933 Miss Bergan was 74 years of age. According to column 2 of table A mentioned in [Regs. 108 §86.19], the present value of $1 due at the end of each year during the life of a person 74 years of age is $5.18402, or $32,400.13 for an annuity of $6,250.* This is the same method of computation as petitioner used in arriving at the figures of $38,880.15 as being the value of Mrs. Goggin's agreement to support and maintain Miss Bergan during the remainder of her life. The difference in our figure and that arrived at by petitioner is that we use a figure of $6,250 as the cost of annual support and maintenance for Miss Bergan, whereas petitioner used $7,500 as such annual figure. We find, therefore, that Miss Bergan transferred property of the value of $133,662.37 for an equivalent in money of $32,400.13, and, under [§2512(b)], we hold that the excess of the value of the property transferred over the value of the consideration, or $101,262.24, shall be deemed a gift and shall be included in computing the amount of gifts made by Miss Bergan during the calendar year 1933. . . .

Decisions will be entered under Rule 50.

* This table was employed for gifts made prior to January 1, 1952, see Regs. 108 §86.19(g), but a revised table computed on the basis of interest at 3½ per cent instead of 4 per cent is in effect for current gifts. Regs. §25.2512-5. — Ed.

BECKLENBERG'S ESTATE v. COMMISSIONER

273 F.2d 297 (7th Cir. 1959)

Before SCHNACKENBERG, PARKINSON and KNOCH, Circuit Judges.

KNOCH, Circuit Judge.

This matter comes to us on petition for review of a decision of the Tax Court of the United States, respecting the gross estate of Maria Becklenberg, deceased, for federal estate tax.

On March 17, 1934, decedent joined with her husband and son in establishing a Trust, to which each contributed assets then valued as follows:

Decedent	$379,166.37	26.78%
Fred Becklenberg, Sr.	293,499.32	20.73%
Fred Becklenberg, Jr.	743,186.56	52.49%

No separate accounts were maintained. Several properties contributed by decedent were sold. No distribution was made. On August 12, 1938, the Trust was revoked and its assets transferred to a new Trust. This 1938 Trust provided for liquidation as expeditiously as possible and for purchase of annuities for specified members of the family, including one for decedent in the amount of $10,000 per year for life. Until purchase of the annuities, sums might be paid to the beneficiaries, not to exceed $10,000 annually in the case of decedent. No annuities were purchased during decedent's life. Certain payments were made to the beneficiaries, including payments not in excess of $10,000 annually to decedent.

The taxpayer argues that decedent retained no right to income; that she, in effect, bought a right to an annuity; that the payments actually made to her (out of income of the Trust, though not out of income of the specific assets she contributed to the Trust) could have been terminated at any time by purchase of an annuity for her. . . .

> The indisputable fact is that decedent received the right to annual payments of $10,000 from the 1938 trust until the trust purchased the annuity policy that would produce $10,000 annual payments from some insurance company. This is the way all of the donors construed the instrument and their interpretation was confirmed by the State Court. This is made abundantly clear by the claim for back payments made by decedent which was settled by the deed, the construction alleged in the interpretation suit, and the court decree, and the actual payment to decedent of $10,000 annually until she died. There is no merit in petitioner's argument that all decedent obtained under the 1938 trust was the right to compel the trustees to purchase an annuity that would give her annual payments of $10,000.00. The argument is foreclosed by the interpretation of the 1938 trust instrument by the donors and the Illinois Court.

The Superior Court of Cook County, Illinois, in Case Gen. No. 43-S-7734, construed the 1938 Trust in a suit brought in 1943 by Fred Becklenberg, Sr., as Trust Manager, and Fred Becklenberg, Jr., then sole Trustee. In their Complaint, they stated that, in their interpretation of the 1938 Trust, decedent was entitled to annual payments of $10,000 until the annuity was purchased.

The Superior Court approved the actions, accounts, and interpretation of Fred Becklenberg, Sr., and Fred Becklenberg, Jr., and decreed (inter alia) that wide discretion was vested in the Trustee and the Trust Manager as to when, or whether, the annuities should be purchased; that, in view of changed conditions and circumstances, distribution to certain named members of the Becklenberg family need not be restricted to the purchase of life insurance annuities, but that the 1938 Trust Agreement authorized distribution to them, of income, principal

or proceeds, "having due regard, however, to the preservation of sufficient of the principal or corpus of said Trust Estate to assure annual payments provided for under said Trust Agreement" including the $10,000 annual payment to decedent.

The Superior Court further provided, in connection with such distribution for certification that "the remainder of the principal or corpus of said Trust Estate is amply sufficient to assure the payments provided . . . to be made" including that to decedent. During the years 1940 through 1951, decedent did receive approximately $10,000 annually.

The Tax Court held that decedent had retained the right to receive annual distributions of $10,000 from the income of the 1938 Trust and that, therefore, the amount of corpus necessary to produce such income was includible in her gross estate for purposes of the federal estate tax. The Tax Court capitalized the annual payment of $10,000 by the average rate of return of income on the trust property (which the Tax Court found to be 0.03455%) or $289,855.07, to find the amount includible in the gross estate.

We agree that decedent (under the interpretation made by the Superior Court of Cook County) retained a right to receive $10,000 annually, by way of annuity or by distribution from the Trust. Although this sum was, in fact, paid to decedent out of the income of the Trust for most years, it does not appear that the payments were restricted to income. In 1942, in settling decedent's claim for deficiencies in payments previously made to her, a portion of the corpus was distributed to decedent with approval of the Superior Court. Under the 1938 Trust, payments might be made from principal. Under the construction of the Superior Court, decedent would have had to be paid $10,000 annually, even though the Trust produced an income of less than $10,000, and it had been necessary to invade corpus. Unlike the Tax Court, we believe that the Trust had an obligation to pay decedent $10,000 annually, and that her right to receive it was not limited to the property transferred by her or the income therefrom.

The Tax Court has computed the amount of the Trust assets to be includible in decedent's gross estate as though the Trust here required decedent to be paid $10,000 out of taxable income, whereas decedent could have been paid out of principal. She retained the right to receive $10,000 annually for life; she did receive $10,000 annually for life. Thus at her death, there was nothing left to be included in her gross estate.

The case before us is clearly distinguishable from the cases cited by the Commissioner. In both Estate of Moreno v. Commissioner, 8 Cir., 1958, 260 F.2d 389, and Toeller's Estate v. Commissioner, 7 Cir., 1948, 165 F.2d 665, the Trust provided for distribution of all income with a further provision for invading the corpus for specified emergencies.

Unlike the Commissioner and the Tax Court, as indicated above, we do see similarities between the case before us and the line of cases mentioned in Fidelity-Philadelphia Trust Co. v. Smith [infra page 1257, note 4].

In Estate of McNichol v. Commissioner, 3 Cir., 1959, 265 F.2d 667, and other cases like it, cited by the Commissioner, the decedent purported to convey income-producing property without reservation, but actually did make contemporaneous oral agreements (or other arrangements) under which he was to receive the income, and under which he did, in fact, receive the income until his death.

Because of the basis on which this case has been determined, we do not reach various other questions respecting such matters as, for example, valuation of assets which decedent transferred to the Trust, or computation of the amount of corpus which would have been needed to produce an income of $10,000 annually, had decedent retained the right to receive payments of $10,000 annually, limited to income of the Trust.

Reversed.

NOTE

1. *"The income from the property."* If A owns one thousand shares of A.T. & T. stock, on which the annual dividend for many years has been $9.00 per share, and transfers these shares in trust, reserving for himself the income for life, the value of the shares at the date of his death will be includible in his gross estate under §2036. Does the statute produce a different estate tax result if he transfers the shares to his children and they agree: (a) to hold the securities for his life and to pay him the dividends therefrom; (b) to pay him $9000 per year for his life whether they hold the securities or not; or (c) to pay him each year, whether they hold the securities or not, an amount equal to the dividends declared by the American Telephone and Telegraph Company on one thousand shares?

Would the estate tax effect of agreement (a) be affected if the children pledged the securities with A or with a third person to insure compliance with their agreement? If any of these three cases is treated differently under the statute than a transfer of the securities in trust with reservation of income for life, is there any reason of policy for the difference? See Greene v. United States, 237 F.2d 848 (7th Cir. 1956) (transfer of property to donee on latter's agreement to pay the income to donor, but not less than $1500 per year: held. §2036 embraces transfer by trust "or otherwise," including this transaction); Rev. Rul. 55-378, 1955-1 C.B. 447, involving a trust of $100,000 created by the grantor for the benefit of his children, under which he reserved the right to withdraw $2500 a year or all of his living expenses: "The decedent did not transfer the property to his children absolutely in consideration of their agreement to pay him $2500 a year or all of his living expenses but instead he transferred the property into a trust account reserving the right to receive $2500 a year or all of his living expenses out of the transferred property. Accordingly, it is held that the transfer was not a bona fide sale for an adequate consideration in money or money's worth and is includible in decedent's gross estate" under §2036(a). Is the ruling based on a distinction without a difference? See Fidelity-Philadelphia Trust Co. v. Smith, infra page 1257, note 4.

For the income tax consequences of private annuity arrangements, see Commissioner v. Kann's Estate, supra page 461; and note that the dissenting judge viewed the transaction as a substitute for a testamentary disposition.

2. *Retention of fixed amount on a transfer of property.* Suppose A transfers $100,000 in trust, reserving the right to receive the first $25,000 of income produced by the transferred property. If A dies before he has received $25,000, is the corpus includible in his estate on the ground that he retained the income for a "period which does not in fact end before his death"? Would it make a difference whether, having regard to his life expectancy and the trust's yield, the $25,000 was likely to be paid during his life or not?

Suppose he reserved the right to receive the income for 3 years and died during that period. Would inclusion depend upon whether 3 years was more or less than his life expectancy? The pre-1954 Regulations provided that §2036 (a) was applicable if the decedent reserved the income of property "for such a period as to evidence his intention that it should extend at least for the duration of his life and his death occurs before the expiration of such period." Regs. 105 §81.18. This provision does not appear in §20.2036-1 of the current Regulations. See Estate of Fry v. Commissioner, 9 T.C. 503 (1947); cf. Estate of Hays v. Commissioner, 181 F.2d 169 (5th Cir. 1950); see also the 1932 committee report on the phrase "for any period which does not in fact end before his death," supra page 1180.

3. *Purchase of annuity as substitute for retention of life estate.* If A transfers $100,000 into a trust, reserving the income for life, with remainder to his children, §2036 will require the trust property to be included in his gross estate, and any part of the income that he may have saved will be includible under §2033. If he spends part of his $100,000 for an annuity, from which he will receive $5000 annually for his life, and puts the balance of the $100,000 in trust to accumulate the income for his life and to pay the corpus and accumulated income to his children on his death, his gross estate will include only such amounts as he may have saved out of the annual receipts from his annuity. (If he is concerned about the possibility that the fixed income from the annuity will

turn out to be less, because of inflation, than might have been earned by investing the original $100,000, he may be able to restore the balance by buying a variable annuity.) Should the two transactions have the same estate tax results? See Fidelity-Philadelphia Trust Co. v. Smith, infra page 1255.

4. *Distributions of income to grantor in trustee's discretion.* Boardman's Estate v. Commissioner, 20 T.C. 871 (1953), involved a transfer of property in trust under which the trustees were to make such distributions to the grantor from income and principal as they "deem necessary for her comfort, support and/or happiness." The court found that the trust instrument "offered no basis upon which the trustees could have withheld any of the income of the trust which the decedent might have desired during her life" and held that in these circumstances she retained the right to the income for life. The principal purpose of the trust was to support the decedent, the court said that the trustees "could not resist her demand for the income," and she in fact did receive the income therefrom during her life. Would the result have been different if the primary purpose of the trust had been to provide an income for life for the grantor's parents, but the trustees were given the power to make such distributions to the grantor as they "deem necessary for her comfort, support and/or happiness"? See Blunt v. Kelly, supra page 1164.

If the decedent created a trust under which the trustee had unfettered discretion to distribute income or corpus to the decedent, can the trust property be included in the gross estate if under state law the decedent's creditors could have levied on it? See Uhl's Estate v. Commissioner, 241 F.2d 867 (7th Cir. 1957); Zissman, Problem Areas in the Estate Tax, 41 Taxes 875, 881-884 (1963).

COMMISSIONER v. DWIGHT'S ESTATE

205 F.2d 298 (2d Cir. 1953), cert. denied, 346 U.S. 871

Before L. HAND, AUGUSTUS N. HAND and FRANK, Circuit Judges.

AUGUSTUS N. HAND, Circuit Judge.

The Tax Court, with four judges dissenting, held that there is an overpayment of the estate tax in the amount of $173,353.28 since the Commissioner had erred in including the decedent's gross estate the value of two trusts established by him during his lifetime. 17 T.C. 1317. The findings of fact by the Tax Court may be summarized as follows:

The decedent, Arthur S. Dwight, who at the time of his death on April 1, 1946, was a resident of the State of New York, on March 15, 1930, married Anne Howard Chapin who had had six children by a previous marriage. All of the children were adults at that time with the exception of one who was seventeen years of age. Until decedent's death he and his wife lived together as husband and wife at their principal residence in Great Neck, Long Island, except for winters which were spent at their Florida home.

On December 21, 1931, the decedent established a trust of $170,000, which he increased by $25,000 in 1934, for the benefit of his wife and her six children. The corporate trustee was to distribute 40% of the income to the decedent's wife and 10% to each of her children "for their support and maintenance," but the trustee was "not responsible for the use or application of such income." The trust was to terminate at the death of the survivor of the decedent and his wife, when the principal was to be distributed to the children or their issue. Provision was made for the allocation of the income share of any beneficiary who died prior to the termination.

On August 15, 1935, the decedent made a transfer, on which a federal gift tax was assessed and paid, of $200,000 in trust. The trust indenture provided that the decedent's wife would receive the income during her lifetime "for her support and maintenance, without power of anticipation." Upon the death of the income-beneficiary the trust was to terminate and the principal was to be dis-

tributed in equal shares to eight named persons or their issue. A letter written before, but not delivered until after, the execution of the trust indenture shows that the decedent's motive for establishing this trust was to provide his wife with income to meet the living and hospital expenses of her two adult invalid daughters and to meet the annual maintenance expense of the winter home in Florida which he had previously given to her. At all times during their marriage the decedent paid the expenses of running the family home in Great Neck, Long Island; after the establishment of the first trust the decedent's wife paid for her own clothing and other personal needs.

The Commissioner contends that 40% of the value of the first trust, and the entire value of the second trust are includible in the decedent's gross estate by reason of [§2036(a)], since the income was to be used to discharge his legal obligation to support his wife. (The Commissioner has conceded that New York law imposed no legal obligation upon the decedent to support his surviving stepchildren who were all adults at the time of his death, . . . and therefore has limited the appeal to 40% of the value of the first trust. . . .) The majority of the Tax Court held that the decedent did not retain the enjoyment of the income for life since he did not reserve to himself an enforceable right to have the trust income applied towards his wife's support.

Although a husband is of course able to make a gift to his wife without affecting his duty to support her, . . . we think that this was clearly not the case here as to the first trust. The decedent was under a legal duty to support his wife under the New York law . . . and the trust instrument provided that the income was for her "support and maintenance." We agree with the dissenting opinion in the Tax Court that this provision was not meaningless, and think that Helvering v. Mercantile-Commerce Bank & Trust Co., 8 Cir., 111 F.2d 224, certiorari denied 310 U.S. 654, is not distinguishable on the ground that there the settlor reserved an "enforceable right" to have the income applied toward his wife's support in the trust instrument. See also Helfrich's Estate v. Commissioner, 7 Cir., 143 F.2d 43; Hooper v. Commissioner, 41 B.T.A. 114. Having furnished his wife with this income the husband had in part at least discharged his legal obligation of supporting her. . . . The existence of the income from the trust would certainly have been a pro tanto defense in any suit for support brought by his wife. We do not see how the absence of a provision in the trust for rigid supervision of the wife's expenditures in any way affects this reasoning. Nor do we see why it should matter that the decedent's full obligation to support may not have been discharged. . . . Thus, since part of the income of the first trust was, in the language of the regulations, "to be applied toward the discharge of a legal obligation of the decedent" [Regs. §20.2036-1(b)(2)], we hold that he retained the enjoyment of that income and accordingly 40% of the value of the trust is includible in his gross estate.

The second trust presents a more difficult problem. Although the trust instrument also provided that the income was to be paid for the "support and maintenance" of the decedent's wife, his explanatory letter indicates that his intent was to furnish her with sufficient income to care for her two invalid daughters and to pay for the maintenance of the Florida home. It is asserted that neither item was within the decedent's legal duty to provide for his wife, and that therefore he did not retain the enjoyment of the income within the meaning of [§2036(a)]. The taxpayer justifies the admission of this letter into evidence by the Tax Court over the objection of the Commissioner on the ground that the parol evidence rule is inapplicable in a controversy involving a stranger to the integrated trust indenture. . . . However, this is too broad a statement of the rule, for a stranger to an instrument may not in every case vary its terms by parol evi-

dence. . . . Facts recited in an integrated agreement may of course be shown to be untrue even by the parties themselves. Restatement, Contracts, §244. Moreover, proof of fraud against the rights of third parties may be received, even though such evidence would perhaps be inadmissible in a suit between the parties themselves. 3 Williston, Contracts, §647 (Rev. ed.); 9 Wigmore, Evidence §2446 (3d ed.). But here there is no question of fraud on the rights of the tax collector. And where the issue in dispute is the legal obligation of the parties to the agreement, the writing must be taken as the full expression of that legal relationship (assuming that the parties intended the writing to be an integration of the complete contract.) 3 Corbin, Contracts, §596; 3 Williston, Contracts, §647 (Rev. ed.); 9 Wigmore, Evidence, §2446 (3d ed.).

The trust indenture here created a legal obligation on the part of the trustee to pay the income to the settlor's wife for her "support and maintenance." Although strictly speaking the wife was not a party to the agreement, it is to her that the obligation is owed and only she may enforce it. Restatement, Trusts, §200; 2 Scott, Trusts, §200. Her rights are entirely dependent on the legal effect of the trust indenture. Consequently, in a suit by the wife against her husband for support the parol evidence rule would have prevented her from showing that the income was not to be used for her "support and maintenance" and the existence of the second trust would have been a pro tanto defense for the husband. Therefore, since the income was to be used to discharge the decedent's legal obligation, he retained its enjoyment and use, and under [§2036(a)] the principal of the trust is includible in his gross estate.

The respondent has presented no proof that the decedent's obligation to support would not have at least equalled the amount of the income payable to his wife from these two trusts. The taxpayer had the burden of proof upon this question, . . . and in the light of his evident wealth we hold that the decedent's own estimation in the provisions of these trusts of the extent of his obligation to provide for his wife did not exceed what the law would have required of him. Therefore, 40% of the value of the first trust, and the entire value of the second trust are includible in his gross estate.

Accordingly, the judgment is reversed and the case remanded to the Tax Court for a recomputation of the decedent's estate tax in accordance with the terms of this opinion.

L. HAND, Circuit Judge (dissenting in part).

I altogether agree as to the first trust, for it seems fair to me to hold the taxpayers to their burden of proof to show that forty per cent of its income would not have been more than a reasonable allowance to the wife for her "support and maintenance." As to the second trust, if we were to affirm the order, I think I should also agree that the taxpayers should have shown that the income from it, when added to forty per cent of the income from the first trust, was no more than a New York court would have allowed to the decedent's wife for "support and maintenance." But we are reversing the order and are sending the cause back to the Tax Court to recompute the tax; and I do not see what warrant we have for denying to the taxpayers the privilege of carrying the burden of so proving, if they can, now that it has become vital. The only reason for such a denial must be that they failed to do so before, when it turned out to be unnecessary; and that appears to me unduly severe.

The liability of a husband for the "support and maintenance" of his wife depends, certainly in cases of divorce, upon his resources and the spouses' customary mode of life. Only to that extent is he liable, and his liability measures the extent of the tax in the case at bar. It is a very fluid issue at best, and if the taxpayers wish to contest it, I would not foreclose them. I agree that in an action

on the deed the husband's letter could not be used to modify the obligation to devote the income of the second trust to the wife's "support and maintenance"; but what he gave does not measure what the courts would allow her; and the letter would certainly be competent evidence of his opinion as to what was a suitable allowance. Moreover, I rather think that his opinion would be relevant in determining the amount of his legal liability for "support and maintenance," though that is not so plain. In any event, I need not pass on that, for my view is not to prevail.

NOTE

1. *Support trusts.* According to Regs. §20.2036-1(b)(2), §2036 applies if the income from the transferred property "is to be applied (or an enforceable right exists to cause it to be applied) toward a legal obligation of the decedent, or otherwise for his pecuniary benefit." Compare §677(b), providing that the income of a "support" trust is not to be taxed as income of the grantor "merely because such income in the discretion of another person, the trustee, or the grantor acting as trustee or co-trustee, may be applied or distributed for the support or maintenance of a beneficiary whom the grantor is legally obligated to support or maintain, except to the extent that such income is so applied or distributed." This provision was enacted after it was held in Helvering v. Stuart, 317 U.S. 154 (1942), that if a trustee had the power to use the income of a trust for the support of the grantor's minor children, the income came within the language of what is now §677(a)(1) and (2). Supra page 371. May a support trust be included in the gross estate even though the income was not taxed to the decedent during his lifetime, or be excluded from the estate even though the income was taxed to the decedent? Should different tests be applied?

On the problem of determining whether a trust's income discharges the grantor's support obligation or not, see Lee's Estate v. Commissioner, 33 T.C. 1064 (1960), and cases there cited.

Note the concession by the government regarding the income payable to adult stepchildren under the first trust. If they were minors when the trust was created, but reached their majority before the settlor's death, was the income reserved by him for a "period not ascertainable without reference to his death"?

If a gift to the decedent's wife or minor children became part of the donee's "independent resources" to be taken into account under local law in determining the amount of his support obligation in later years, does the income from the property serve to discharge his legal obligation — or did the gift itself eliminate any such obligation (or reduce it pro tanto)?

If a trust for the support of the decedent's wife or minor children is included in his gross estate under §2036, can any part of the corpus be excluded on the ground that the transfer was "a bona fide sale for an adequate and full consideration in money or money's worth"? See E.T. 19, supra page 1033; McKeon's Estate v. Commissioner, 25 T.C. 697, 705-707 (1956) (E.T. 19 not cited).

See Note, Federal Tax Aspects of the Obligation to Support, 74 Harv. L. Rev. 1191, 1217-1220 (1961).

2. *Gift tax aspects of support trusts.* There was no gift tax when the 1931 trust in the *Dwight's Estate* case was created. Had it been created after 1932, would a federal gift tax be due? Gift tax was paid, the court states, on the 1935 trust. Should the value of the wife's income interest have been excluded in computing the grantor's gift tax liability? See page 1036 supra.

3. *Alimony trusts.* See §682, providing that a wife who is divorced or legally separated from her husband must report the income of a trust created by the husband for her support. Is the corpus of such a trust includible in the husband's gross estate under §2036 even though the wife is taxable on the income? Can it be excluded from the husband's estate under the parenthetical clause relating to a bona fide sale? See E.T. 19, supra page 1033; Past v. United States, 13 A.F.T.R.2d ¶146,505 (S.D. Cal. 1963) (property settlement). If the creation of such a trust terminates the husband's duty to support

his wife under local law, is §2036 inapplicable? See discussion in Helvering v. Fuller, 310 U.S. 69 (1940), and Helvering v. Fitch, 309 U.S. 149 (1940), of the possibility of thus terminating the husband's obligation.

If the income of an alimony trust is to be paid to the ex-wife even if she remarries, and this event occurs before the grantor's death, has the income been reserved by him "for his life or for any period not ascertainable without reference to his death"?

4. *Contradicting the instrument.* In *Dwight's Estate,* the court held that the parol evidence rule precluded evidence that the grantor did not intend to discharge his duty of support by establishing the second trust. What if the shoe is on the other foot: the instrument contains no reservation of the income, but the government offers evidence that the income was in fact received by the decedent and asks the court to infer from this fact that there was a secret arrangement between him and the trustee amounting to a reservation of the income? In Skinner's Estate v. United States, 316 F.2d 517 (3d Cir. 1963), a determination by the District Court that there was such an understanding was upheld, although the court indicated that it was "breaking new and perhaps dangerous ground" by placing "a heavy burden upon the estate of a settlor of a discretionary trust to avoid the inference of secret prearrangement with the trustee when the settlor has in fact received all income during his life." See also McNichol's Estate v. Commissioner, 265 F.2d 667 (3d Cir. 1959), cert. denied, 361 U.S. 829 (accord).

Note that the decedent in *Dwight's Estate* gave his wife their Florida home (in 1934, according to the Tax Court, 17 T.C. at 1320). If he expected to spend winters with her in Florida after after the gift, did he retain "possession or enjoyment of . . . the property" even though the transfer was outright? See Burr's Estate v. Commissioner, ¶45,364 P-H Memo T.C. (summer home given to wife not includible in husband's gross estate; his continued occupancy "was at the sufference of his wife and not because of any rights he possessed in the property").

On the possibility that the grantor may be treated as having retained "possession or enjoyment" of the stock of a one-man or closely held corporation if he continues to own a majority interest and to receive a salary as its principal officer, see Hofford v. Commissioner, 4 T.C. 790 (1945); Holland v. Commissioner, 47 B.T.A. 807 (1942) and 1 T.C. 564 (1943).

5. *Reservation of contingent life estate.* If the grantor of a trust reserves a contingent life estate by providing that the income shall be paid to his wife for her life, then to himself if he survives her, with remainder to the children, and he survives his wife, the property is clearly includible in his gross estate under §2036(a)(1) because he has reserved the income for a "period which does not in fact end before his death." If he predeceases his wife, however, so that his contingent life estate does not ripen into present enjoyment, is the property includible? Although §2036's phrase "for any period not ascertainable without reference to his death" seems to describe the transfer, it has been argued that the explicit reference in the House committee report on the 1932 amendment to the Joint Resolution of 1931 (supra p. 1179) to the taxability of a contingent life estate where the settlor survives the primary life tenant implies by negative inference that the tax does not apply if he does not survive. Since May v. Heiner itself involved a contingent life estate and a transferor who apparently did not survive the primary life tenant, however, the Court of Appeals for the Second Circuit has refused to accept this argument, pointing out that it would produce "the astonishing result" that the Joint Resolution of 1931 "failed of its intended purpose" of reversing May v. Heiner. Marks v. Higgins, 213 F.2d 884 (2d Cir. 1954); see also Commissioner v. Arents' Estate, 297 F.2d 894 (2d Cir. 1962), cert. denied, 369 U.S. 848; Hubbard's Estate v. Commissioner, 250 F.2d 492 (5th Cir. 1957) (contra).

6. *Reservation of life estate on conveyance of jointly held or community property.* In Glaser v. United States, 306 F.2d 57 (7th Cir. 1962), the decedent and his wife conveyed property which they owned as tenants by the entirety to their children, reserving a life estate for themselves jointly and for the survivor. Because the decedent had paid the entire consideration, so that the full value of the property would have been included in his gross estate under §2040 had the tenancy continued until his death, the government argued that the decedent's contingent life estate required the full value to be included under §2036. The court held that he had transferred only one half of the property, with the

result that only one half was included under §2036. See also Borner's Estate v. Commissioner, 25 T.C. 584 (1955); Hornor's Estate v. Commissioner, 305 F.2d 769 (3d Cir. 1962).

For a similar transaction involving community property, see Vardell's Estate v. Commissioner, 307 F.2d 688 (5th Cir. 1962) (decedent's husband had provided by will that his one half of their community property would be put in trust with income to her and remainder to children provided she elected similar treatment for her one half; held, one judge dissenting, her share of the community property, less the value of the life estate received by her, is includible in her gross estate).

See Comment, Problems of Estate and Gift Taxation of Joint Ownership Interests, 10 U.C.L.A.L. Rev. 1205, 1213-1222 (1963).

STATE STREET TRUST CO. v. UNITED STATES

263 F.2d 635 (1st Cir. 1959)

Before MAGRUDER, Chief Judge, and WOODBURY and HARTIGAN, Circuit Judges.

WOODBURY, Circuit Judge.

This is an appeal from a judgment entered in a civil action brought . . . by the executors of the estate of Milton L. Cushing to recover an asserted overpayment of estate taxes resulting primarily from the Commissioner's inclusion in the decedent's gross estate of the value of three inter vivos trusts of which the decedent was in effect the settlor and at the time of his death a co-trustee. After trial without a jury the District Court, upon its findings of fact and conclusions of law, held that the value of the three trusts were properly includible in the decedent's gross estate and that the Commissioner had property disallowed certain claimed deductions for executor's commissions and legal fees. But it held that the estate was entitled to a deduction of $2,000 as the reasonable expense of the prosecution of this action. The court below therefore entered judgment for the plaintiffs in the amount of $567.20, with interest, and the plaintiffs thereupon took this appeal.

It is agreed that the only question now presented is whether the discretionary powers set out in the three trusts render the trust property includible in the decedent's gross estate under [§§2036(a)(2) and 2038(a)(1)].

There is no substantial dispute over the facts. They are as follows:

In 1925 Milton L. Cushing established three spendthrift trusts for the benefit of three of his children wherein he named himself and a bank as co-trustees. These trusts were irrevocable and there was no express reservation of power to alter, amend or revoke, but the settlor reserved the power to terminate them and cause the properties held in the trusts to be distributed to the respective beneficiaries. In 1949 the decedent exercised this power with respect to each of the trusts, but he did so upon the condition that the respective beneficiaries immediately establish new trusts of the property covered in each of the old ones. The beneficiaries did so and the court below held and the appellants agree that in this situation the decedent must be treated as the settlor. Thus, although the trust instruments in issue are written as though the respective beneficiaries are the settlors, it is admitted that actually the decedent was the settlor, and therefore that the powers given to the trustees in these trusts must be regarded as having been reserved by the decedent himself.

The District Court found that the 1949 trusts were created primarily to carry out the decedent's original purpose to assure the maintenance of his three children. More specifically, that court found that because of a possibility of reverter in the 1925 trusts the decedent was concerned about the possible effect of Estate of Spiegel v. Commissioner, 1949, 335 U.S. 701, which held an estate taxable

under §811(c) [1939 Code] for the value of an inter vivos trust wherein there was the possibility of a reversion to the settlor should he outlive his children and grandchildren. But in addition the court found that the decedent [160 F. Supp. 878] "also wished to make some changes in the very rigid and restrictive investment provisions and, since two of the beneficiaries had been married and divorced, he thought that the terms of the original trusts were no longer adequate." [1]

The three 1949 trusts are substantially identical, and they are similar to the 1925 trusts in that they contain no express reservation of power to alter or amend. They differ from the earlier trusts, however, in that they are expressly irrevocable and there is no reservation of power to terminate them and cause distribution of the trust properties to the beneficiaries. The decedent and Old Colony Trust Company are made co-trustees and in the first paragraph of each of these trusts, the trustees are directed to pay the net income of the trust funds to the life beneficiary named therein, "quarterly, or oftener if practicable," and in addition from time to time to pay to that beneficiary or for his benefit, in their "sole and uncontrolled discretion," such portion or portions of the principal as the trustees "may deem necessary or advisable" for the beneficiaries' "comfortable maintenance and/or support." The District Court held that under Massachusetts law the trustees' power to invade capital for the beneficiaries' "comfortable maintenance and/or support," though broad, nevertheless created determinable rights in the beneficiaries which could be enforced in a court of equity. It therefore concluded that under the rule applied in Jennings v. Smith, 2 Cir., 1947, 161 F.2d 74, the corpora of the trusts were not made taxable to the settlor's estate under [§§2036 or 2038], by reason of the trustees' power to invade principal for the support of the life beneficiaries. The government does not urge error in this holding as ground for sustaining the judgment below.

The problem on this appeal arises from the provisions of the third paragraph of the trusts wherein the trustees are clothed with broad powers with respect to the investments open to them and their management of the assets of the trusts. The language of this paragraph which the court below found to be so broad that the trustees were not limited in the exercise of their fiduciary duties by any determinable standard, so that the rule of the Jennings case does not apply to prevent inclusion of the corpora of the trusts in the deceased settlor's gross estate, and on which the government relies to sustain that holding, is as follows:

> In addition to and not in limitation of all common law and statutory authority, the Trustees shall have power . . . to exchange property for other property; . . . to retain and invest and reinvest in securities or properties although of a kind or in an amount which ordinarily would not be considered suitable for a trust investment, including, but without restriction, investments that yield a high rate of income or no income at all and wasting investments, intending hereby to authorize the Trustees to act in such manner as it is believed by them to be for the best interests of the Trust Fund, regarding it as a whole, even though particular investments might not otherwise be proper; . . . to determine what shall be charged or credited to income and what to principal notwithstanding any determination by the courts and specifically, but without limitation, to make such determination in regard to stock and cash dividends, rights, and all other receipts in respect of the ownership of stock and to decide whether or not to make deductions from income for depreciation, amortization or waste and in what amount; . . . and generally to do all things in relation to the Trust Fund which I, the Donor, could do if living and the Trust had not been executed.

[1] Accordingly, although the decedent died nine months after the creation of the 1949 trusts, the court below rejected the contention made by the government in that court, but not suggested here as a possible ground for affirmance, that the transfers to those trusts were made by the settlor in contemplation of his death.

In conclusion the third paragraph of the trusts provides: "All such acts and decisions made by the Trustees in good faith shall be conclusive on all parties at interest and my Trustees shall be liable only for their own wilful acts or defaults, but in no case for acts in error of judgment."

The case is very close, but we agree with the result reached by the District Court.

It is true that it is not at all unusual to clothe trustees with power to invest trust assets in securities other than so-called "legals." And it is also true that it is far from uncommon to provide that trustees shall have the power in their discretion to allocate accretions to the property they hold in trust to principal or to income, at least when there is no settled rule of law to apply and proper allocation is open to honest doubt. Certainly in the exercise of one or both of these powers trustees can to some extent affect the interests of the various beneficiaries. Indeed, even in a trust wherein investment is limited to "legals," a trustee can effect some shifting of benefits between life beneficiaries and remaindermen by his choice of investment with respect to rate of income return or growth potential. But we would hardly suppose that in the ordinary case inclusion of one or both of the above provisions in a trust instrument would be a crucial factor in deciding whether or not the corpus of the trust should be included in a decedent's estate.

This, however, is not an ordinary case. Literally, the trustees have power to exchange trust property for other property without reference to the value of the properties involved in the exchange. And literally, they have power to invest the trust assets in securities yielding either a high rate of income or no income at all, and even in wasting investments, and they have power to invest trust assets in these categories in whatever amounts they choose without limitation with respect to the percentage of the trust corpus invested in any one of them. Moreover, the trustees' discretionary power to allocate trust assets to corpus or income is not limited to situations where the law is unsettled and there is honest doubt whether a given accretion or receipt should be classified as capital or income. See Doty v. Commissioner, 1 Cir., 1945, 148 F.2d 503, 507, and Scott on Trusts §§232-237 (2d ed. 1956). Indeed the trustees' power of allocation does not seem even to be limited to accretions or receipts but would appear to extend in terms to any item of trust property. Furthermore, the trustees may make deductions from income for depreciation, amortization or waste in whatever amounts they see fit. They are, to be sure, required to exercise good faith in their dealings with the trust properties and furthermore they are admonished "to act in such manner as it is believed by them to be for the best interests of the Trust Fund, regarded as a whole." But they are immune from liability for errors of judgment however gross; their only stated liability is "for their own wilful acts or defaults."

In spite of the breadth of the language used, we do not conceive, however, that short of "wilful acts or defaults," the trustees are as free as the wind in their administration and management of the trusts. As stated by Judge Learned Hand in Stix v. Commissioner, 2 Cir., 1945, 152 F.2d 562, 563: ". . . no language, however strong, will entirely remove any power held in trust from the reach of a court of equity. After allowance has been made for every possible factor which could rationally enter into the trustee's decision, if it appears that he has utterly disregarded the interests of the beneficiary, the court will intervene. Indeed, were that not true, the power would not be held in trust at all; the language would be no more than a precatory admonition."

We may therefore assume that a Massachusetts court of equity at the behest of a beneficiary would intervene not only in the event of a wilful act or default by the trustees, but would also intervene in the event the trustees should act in utter

disregard of the rights of a beneficiary. Thus, no doubt, an appropriate court of the Commonwealth in the exercise of its equity jurisdiction would prevent the trustees from putting all, or nearly all, of the trust assets in wasting investments bearing a high rate of income for the benefit of a life tenant at the expense of a remainderman. And no doubt also, the court would step in to prevent the investment of all, or nearly all, the trust assets in a property yielding little or even no income for the benefit of a remainderman at the expense of a life beneficiary. But short of utter disregard of the rights of a life tenant or a remainderman springing from "arbitrary or dishonest conduct or bad faith, or fraud" Dumaine v. Dumaine, 1938, 301 Mass. 214, 224, 16 N.E.2d 625, 630, a Massachusetts court would have no external standard with which to measure the trustees' conduct. The area of the trustees' discretion, although not untrammelled, is about as broad as language can make it and the law permits, and within that area the trustees can act in the administration and management of their trusts to confer or withhold very substantial benefits as between the life tenants and remaindermen.

Perhaps no single power conferred by the decedent on the trustees would be enough to warrant inclusion of the corpora of the trusts in his estate. But we believe that the powers conferred on the trustees, considered as a whole, are so broad and all inclusive that within any limits a Massachusetts court of equity could rationally impose, the trustees, within the scope of their discretionary powers, could very substantially shift the economic benefits of the trusts between the life tenants and the remaindermen. We therefore conclude that under the trusts the decedent as long as he lived, in substance and effect and in a very real sense, in the language of [§2036(a)(2)], "retained for his life . . . the right . . . to designate the persons who shall possess or enjoy the property or the income therefrom; . . ." [2]

Since we believe that the corpora of the trusts is includible in the decedent's gross estate under [§2036] there is no need for us to consider the impact, if any, of [§2038].

A decree will be entered affirming the judgment of the District Court.

MAGRUDER, Chief Judge (dissenting). . . .

In Van Beuren v. McLoughlin, 1 Cir., 262 F.2d 315, decided by us December 12, 1958, we pointed out the drastic, perhaps even ruthless way in which [§2038] of the Internal Revenue Code operates against the taxpayer. The operation of [§2036(a)], upon which the opinion of the court is here based, is even more drastic, for whenever that section is properly applicable, there must be included in the gross estate the whole value of the corpus of any property which the decedent has transferred during his lifetime. On the other hand, under [§2038] there must be included in the gross estate only the value of the particular interests, the enjoyment of which had been subject to a change through the exercise of a described power vested in the decedent at the date of his death.

For the reasons explained in my dissenting opinion in Industrial Trust Co. v. Commissioner, 1 Cir., 1947, 165 F.2d 142, 148, 1 A.L.R.2d 144, I would think that the taxpayers here were entitled to claim that only [§2038] could apply and therefore in any event the whole of the value of the corpus ought not to have been included in the gross estate. But I go further, and suggest that neither [§2036(a)] nor [§2038] is properly applicable to this case.

At the outset, I would concede that the fact the grantor holds the described powers only as a fiduciary is not in itself enough to preclude the imposition of an estate tax. See Welch v. Terhune, 1 Cir., 1942, 126 F.2d 695, certiorari denied

---

2 The language of the section makes it clear that it is immaterial that the decedent could exercise his power only in conjunction with his co-trustees.

1942, 317 U.S. 644. That case was a holding under [§2038], but I suppose that by a parity of reasoning the same result must be reached under [§2036(a)].

It is admitted by the court that the various types of broad powers of management conferred upon the trustees here are familiar grants to trustees as such, and that the case is a "very close" one. Confining itself narrowly to the facts of the particular case, the court says that perhaps "no single power conferred by the decedent on the trustees would be enough to warrant inclusion of the corpora of the trusts in his estate. But we believe that the powers conferred on the trustees, considered as a whole, are so broad and all inclusive that within any limits a Massachusetts court of equity could rationally impose, the trustees, within the scope of their discretionary powers, could very substantially shift the economic benefits of the trusts between the life tenants and the remaindermen." The court comes to this conclusion, though recognizing that "in the ordinary case" the power of a trustee in the exercise of familiar controls over investments, whereby he would be enabled (and perhaps required by his duties) to effect some shifting of benefits as between a life tenant and remaindermen, cannot amount to a "right" to designate the persons who shall enjoy the property or the income therefrom, within the meaning of [§2036(a)(2)].

It seems to me that, despite the undoubtedly broad powers of management vested in the trustees here, the court stretches the statutory language too far. It has to say that these powers of management, taken as a whole, because of their breadth make it impracticable for a Massachusetts court of equity effectively to control the exercise of these fiduciary powers, and therefore constitute a "right" (as distinguished from a "power" — the word used in [§2038]) to designate the persons who shall enjoy the property or the income therefrom. I know of no case that has gone this far.

Moreover, I cannot accept the premise that a Massachusetts court of equity would consider itself impotent to supervise the administration of these trusts so as to control any attempt to shift the incidence of their enjoyment.

It is difficult to imagine how the power "to exchange property for other property" could contribute to the defect the court found — ability to prefer the life tenants to the remaindermen or vice versa — except perhaps by a warped investment policy (and investment powers are specifically dealt with). A requirement that the trustee obtain fair value, even if not implied by the word "exchange," would certainly be imposed by any court of equity. And the Massachusetts court will look behind an apparently authorized exchange of property and strike it down if it conceals any skulduggery or if its result is detrimental in any way to the purposes of the trust the settlor created. See Morville v. Fowle, 1887, 144 Mass. 109, 112, 10 N.E. 766.

The investment powers, although obviously designed to permit a more imaginative program of investment than trustees usually may pursue, were not uncontrolled. Although the portfolio might contain, instead of "legals," investments in wasting assets companies and in stocks with attractive growth potential but paying no current dividends, the trustees were only authorized "to act in such manner as it is believed by them to be for the best interests of the Trust Fund regarded as a whole." I think this clearly requires the trustees to balance these extraordinary investments so that neither income nor principal would be prejudiced by the unusual nature of the portfolio. The Massachusetts court will enforce such a standard as "best interests" and will substitute its judgment for a bona fide, considered, but unsound decision of the trustee. Corkery v. Dorsey, 1916, 223 Mass. 97, 111 N.E. 795; see Hays' Estate v. Commissioner, 5 Cir., 1950, 181 F.2d 169, 171-172.

The accounting power given to the trustees is obviously corollary to this invest-

ment power and necessary to the successful maintenance of this balance; I believe it must be limited to this purpose and restricted to the best interests of the trust as a whole. It is somewhat ironic that a power apparently designed to relax the strict Massachusetts rules that capital gains and stock dividends are both always principal and cash dividends are income, so as to maintain the enjoyment of both the life beneficiaries and the remaindermen, is assigned as contributing to the "right" to prefer one over the other.

To me, all these powers are limited by standards which the Massachusetts court of equity could and would apply to supervise effectively the administration of the trust, and therefore none is either a [§2036(a)] "right" or a [§2038] "power." See Jennings v. Smith, 2 Cir., 1947, 161 F.2d 74. Nor, since in this context the whole cannot be greater than the sum of its parts, is anything gained by lumping them together.

NOTE

1. *Investment powers and §2036.* For cases in which broad investment powers were held to be outside §2036(a)(2) because subject to judicial scrutiny, see King's Estate v. Commissioner, 37 T.C. 973 (1962); United States v. Powell, 307 F.2d 821 (10th Cir. 1962).

In Estate of Downe v. Commissioner, 2 T.C. 967 (1943), the government sought to tax trust property under §2038 because the grantor retained "the option to direct in writing the Trustee to issue voting proxies on and to retain, sell, exchange, invest and reinvest any of the trust property held hereunder in such manner as he may direct and without liability to the Trustee for resulting loss." The court held that this option did not constitute a power to alter, amend, or revoke, citing cases holding that similar powers did not render the grantor liable for income tax on the trust income under §676 (taxing trust income to the grantor if he has a power to revest title to the corpus in himself, supra page 366). The court said: "The two sections have a cognate purpose." 2 T.C. at 973. But §676 is applicable only if title to the property can be "revested" in the grantor, and an investment clause can hardly be interpreted as a power to revest unless it permits the grantor to buy back the corpus for a nominal consideration or otherwise to benefit himself. Section 2038, however, speaks of a power to alter, amend, or revoke. Should investment powers that are beyond the reach of §676 necessarily escape §2038?

UNITED STATES v. ALLEN

293 F.2d 916 (10th Cir. 1961)

Before MURRAH, Chief Judge, and BRATTON and BREITENSTEIN, Circuit Judges.

MURRAH, Chief Judge.

This is an appeal from a judgment of the trial court awarding plaintiff-executors a refund for estate taxes previously paid.

The pertinent facts are that the decedent, Maria McKean Allen, created an irrevocable trust in which she reserved $\frac{3}{5}$ths of the income for life, the remainder to pass to her two children, who are the beneficiaries of the other $\frac{2}{5}$ths interest in the income. When she was approximately seventy-eight years old, the trustor-decedent was advised that her retention of the life estate would result in her attributable share of the corpus being included in her gross estate, for estate tax purposes. With her sanction, counsel began searching for a competent means of

divesture, and learned that decedent's son, Wharton Allen, would consider purchasing his mother's interest in the trust. At that time, the actuarial value of the retained life estate based upon decedent's life expectancy, was approximately $135,000 and her attributable share of the corpus, i.e., $\frac{3}{5}$ths, was valued at some $900,000. Upon consultation with his business advisers, Allen agreed to pay $140,000 for the interest, believing that decedent's actual life span would be sufficient to return a profit to him on the investment. For all intents and purposes, he was a bona fide third party purchaser — not being in a position to benefit by any reduction in his mother's estate taxes. The sale was consummated and, upon paying the purchase price, Allen began receiving the income from the trust.

At the time of the transfer, decedent enjoyed relatively good health and was expected to live her normal life span. A short time thereafter, however, it was discovered that she had an incurable disease, which soon resulted in her untimely death. As a result of the death, Allen ceased receiving any trust income and suffered a considerable loss on his investment.

The Internal Revenue Commissioner determined that $\frac{3}{5}$ths of the corpus, less the $140,000 purchase money, should be included in decedent's gross estate because (1) the transfer was invalid because made in contemplation of death, and (2) the sale was not for an adequate and full consideration.

Plaintiff-executors paid the taxes in accord with the Commissioner's valuation of the estate, and brought this action for refund, alleging that the sale of the life interest was for an adequate consideration; and that, therefore, no part of the trust corpus was properly includible in the gross estate.

The trial court held for plaintiffs, finding that the transfer was in contemplation of death, but regardless of that fact, the consideration paid for the life estate was adequate and full, thereby serving to divest decedent of any interest in the trust, with the result that no part of the corpus is subject to estate taxes.

Our narrow question is thus whether the corpus of a reserved life estate is removed, for federal estate tax purposes, from a decedent's gross estate by a transfer at the value of such reserved life estate. In other words, must the consideration be paid for the interest transferred, or for the interest which would otherwise be included in the gross estate?

In one sense, the answer comes quite simply — decedent owned no more than a life estate, could not transfer any part of the corpus, and Allen received no more than the interest transferred. And, a taxpayer is, of course, entitled to use all proper means to reduce his tax liability. See Cravens v. C.I.R., 10 Cir., 272 F.2d 895, 898. It would thus seem to follow that the consideration was adequate, for it was in fact more than the value of the life estate. And, as a practical matter, it would have been virtually impossible to sell the life estate for an amount equal to her share in the corpus. Cf. Sullivan's Estate v. C.I.R., 9 Cir., 175 F.2d 657.

It does not seem plausible, however, that Congress intended to allow such an easy avoidance of the taxable incidence befalling reserved life estates. This result would allow a taxpayer to reap the benefits of property for his lifetime and, in contemplation of death, sell only the interest entitling him to the income, thereby removing all of the property which he has enjoyed from his gross estate. Giving the statute a reasonable interpretation, we cannot believe this to be its intendment. It seems certain that in a situation like this, Congress meant the estate to include the corpus of the trust or, in its stead, an amount equal in value. I.e., see Helvering v. Hallock, 309 U.S. 106; C.I.R. v. Weymss, 324 U.S. 303; C.I.R. v. Estate of Church, 335 U.S. 632.[1]

---

[1] In his treatise, Cutting the "Strings" on Inter Vivos Transfers in Contemplation of Death, 43 Minnesota Law Review 57, 70, 71, Professor Lowndes says:

The judgment of the trial court is therefore reversed and the case is remanded for further proceedings in conformity with the opinion filed herein.

BREITENSTEIN, Circuit Judge (concurring in result).

. . . .

Trustor-decedent in 1932 created an irrevocable trust and received no consideration therefor. She retained for life the right to income from $\frac{3}{5}$ths of the property which she placed in the trust. By the plain language of the statute that portion of the property held in the trust and devoted to the payment to her of income for life is includible within her gross estate. Such property is an "interest" of which she made a transfer with the retention of income for life.

The fact that the transfer of the life estate left her without any retained right to income from the trust property does not alter the result. As I read the statute the tax liability arises at the time of the inter vivos transfer under which there was a retention of the right to income for life. The disposition thereafter of that retained right does not eliminate the tax liability. The fact that full and adequate consideration was paid for the transfer of the retained life estate is immaterial. To remove the trust property from inclusion in decedent's estate there must be full and adequate consideration paid for the interest which would be taxed. That interest is not the right to income for life but the right to the property which was placed in the trust and from which the income is produced.

As the 1932 trust was irrevocable, trustor-decedent could thereafter make no unilateral transfer of the trust property. Granting that she could sell her life estate as that was a capital asset owned by her, such sale has no effect on the includibility in her gross estate of the interest which she transferred in 1932 with the retention of the right to income for life.

For the reasons stated I would reverse the judgment with directions to dismiss the case.

NOTE

1. *Relinquishment of life estate.* Would the concurring judge have reached the same result even if the decedent had lived for more than 3 years after the life estate was sold?

In computing the deficiency, why did the Internal Revenue Service reduce the amount includible in the decedent's gross estate by $140,000? See §2043 (a). Does the approach of the majority, or of the concurring judge, require this allowance?

In view of its purpose, was the transaction in the *Allen* case necessarily effected in contemplation of death? Supra page 1133.

See also Re Thurston's Estate, 36 Cal. 2d 207, 223 P.2d 12 (1950) (re California inheritance tax; accord, dictum).

2. *References.* Lowndes, Cutting the "Strings" on Inter Vivos Transfers in Contemplation of Death, 43 Minn. L. Rev. 57 (1958); Comment, Tax Consequences of a Gift in Contemplation of Death by a Joint Tenant or a Tenant by the Entirety, 61 Mich. L. Rev. 1335 (1963).

"(T)he adequacy of the consideration which will prevent a tax when an incident of ownership in connection with a taxable inter vivos transfer is relinquished in contemplation of death, will be measured against the value of the interest which would be taxable apart from the transfer in contemplation of death, rather than the property interest which is transferred. . . . (T)he determination of what interest is transferred in contemplation of death and what is adequate consideration to prevent a transfer in contemplation of death from being taxable, should be made on the basis of the tax effect of the transfer and the effect of the consideration on the transferor's taxable estate, rather than by the comparatively irrelevant rules of property law."

Section D. The Relationship Between §2036 and §2038

INDUSTRIAL TRUST CO. v. COMMISSIONER
165 F.2d 142 (1st Cir. 1947)

Before Magruder, Mahoney and Woodbury, Circuit Judges.

Mahoney, Circuit Judge.

The executor under the will of Milton J. Budlong, who died on July 5, 1941, has brought this petition for review of a decision of the Tax Court insofar as it determined a deficiency in the estate tax due.

On July 1, 1929, the decedent established four trusts, with himself as trustee, for the primary benefit of his three children, a daughter and two sons, and his sister, Mrs. George A. Woolsey, respectively. The issue of his three children were designated as remaindermen of all four trusts. A fifth trust created in the same indenture terminated prior to his decease by reason of the death of the beneficiary.

The indenture provided that the trustee should pay over to the several principal beneficiaries so long as they should respectively live, and, in the case of the decease of any of the principal beneficiaries who were children of the settlor, to their surviving children instead, such part or all of the net income of the trusts for their respective benefits as in each case the trustee in his discretion should from time to time deem advisable. It was provided, however, that with respect to Mrs. Woolsey such payment should aggregate $2,500 per annum during her life, with power in the trustee to expend such portions of the principal of her trust as might be necessary in addition to the net income thereof to produce the minimum annual payment. The trustee had discretion to add from time to time any undistributed income of any of the trusts to the principal of its respective trust. After the decedent should cease to act as trustee, the successor trustee was to pay over to Mrs. Woolsey $2,500 per annum from net income and from principal if necessary, accumulating the balance of the net income, if any. He was also to pay over to the settlor's daughter all of the net income of the trust for her benefit, not including, however, sums accumulated from prior years, and to pay over to each of the primary beneficiaries who was a son of the decedent who should have graduated from college, or should have attained the age of twenty-five years, all of the net income of the trust for his benefit, not including, however, income accumulated from prior years. The trust instrument further provided that "said trustee" should have power from time to time in his discretion to expend from the principal of said trusts such amounts as he might deem necessary for the benefit of the respective primary beneficiaries thereof or, in the case of the decease of such of them as were children of the settlor, their respective issue, in case of sickness or other emergency. There was no express reservation of power to alter, amend, revoke or terminate. The trusts were irrevocable and were not made in contemplation of death. Property was transferred to them prior to and subsequent to March 3, 1931.

The decedent on June 16, 1937 created an additional three trusts for the primary benefit of his daughter and two sons, respectively, with remainders to their respective issue. The decedent was trustee of each trust until his death. Each trust instrument provided that the trustee should pay over all the net income to the child named therein, provided that so long as the decedent should remain the sole trustee the trustee should pay over to the named child so much and no more of the net income as the trustee should in his absolute discretion

determine and should add any undistributed income to the capital of the trust estate. These trusts also were irrevocable and there was no express reservation of power to alter, amend, revoke or terminate. They were not made in contemplation of death.

The Commissioner concluded that the corpora of the trusts, except for the value of Mrs. Woolsey's life annuity, were includible in decedent's gross estate under [§§2036 and 2038] and determined a deficiency accordingly.

The Tax Court decided that as to the 1929 trusts the right to invade the corpus in case of sickness or other emergency, even if retained by the decedent, was not a power to "alter, amend, or revoke" within [§2038] and, therefore, no part of the property transferred to the trusts before March 3, 1931 was includible in the gross estate.* But the Tax Court held that the power reserved by the decedent, even though as trustee, to distribute the income or accumulate it in his discretion, amounted to a power to designate the persons who should possess or enjoy income within the meaning of [§2036], thus making all the property transferred to the 1929 trusts after March 3, 1931 and the entire corpora of the 1937 trusts includible in the gross estate. The property transferred before March 3, 1931 was not included since [the] joint resolution of that date has only prospective effect. Hassett v. Welch, 1938, 303 U.S. 303.† The present value of Mrs. Woolsey's life annuity of $2,500, insofar as it related to property transferred after March 3, 1931, was deducted, however, on the theory that as to this the decedent had no power to control.

The executor has petitioned for review on the ground that [§2036] does not apply to any of the trusts, and that even if it is applicable to the children's trusts it is not in the case of Mrs. Woolsey's trust. The Commissioner has not petitioned for review.

The two questions thus presented are (1) whether the corpora of trusts, the income of which could be paid to primary beneficiaries or withheld by the decedent-grantor and added to the corpus, eventually to go to the remaindermen, are includible in the decedent's gross estate under [§2036] on the ground that he possessed a right to designate the persons who should possess or enjoy the income, and (2) if so whether in the case of a trust with a primary beneficiary entitled to a minimum sum certain before the decedent could accumulate the income, the entire corpus of the trust, less the present value of the life annuity, is properly includible in the gross estate.

The taxpayer admits that the decedent had a power to determine who should receive the income as between the life tenants and the remaindermen. Nor does it contest the holding of the Tax Court that it is immaterial that the right to designate was exercisable by the decedent as "trustee." We think this clearly right in view of the reasoning of Welch v. Terhune, 1 Cir., 1942, 126 F.2d 695, certiorari denied, 1942, 317 U.S. 644, and similar cases, which although directly concerned with what is now [§2038] applies equally to [§2036].

The taxpayer contends, however, that a power to designate under [§2036] does not include a power limited only to choosing between two persons already named. An examination of the history of this phrase lends some credence to the contention. Under [§2038] the fact that the decedent can only choose among a limited class is immaterial. Commissioner of Internal Revenue v. Estate of Holmes [supra p. 1145]. . . . But under [§2038] only the interest that may be shifted is included in the gross estate. Commissioner v. Bridgeport City Trust Co., 2 Cir., 1941, 124 F.2d 48, certiorari denied, 1942, 316 U.S. 672. Thus is it

* See Jennings v. Smith, supra page 1155. — Ed.
† See also §2036(b). — Ed.

clear that a pre-1931 reserved power to designate who should enjoy the income was not sufficient to throw the entire corpus into the gross estate. . . . Since even an unlimited power to designate who should enjoy the income during the life of the decedent did not require the value of the corpus to be included in the gross estate under [§2038], nor under [§2036] prior to its amendment in 1931, the plaintiff urges that this was the power at which the legislation was aimed. The argument is bolstered by the fact that the Joint Resolution of March 3, 1931 was enacted to close the gap left by the decision in May v. Heiner, 1930, 281 U.S. 238, and the three subsequent cases, Burnet v. Northern Trust Co., 1931, 283 U.S. 782; Morsman v. Burnet, 1931, 283 U.S. 783; McCormick v. Burnet, 1931, 283 U.S. 784. The taxpayer urges that the Resolution should be interpreted in the light of that background, and that only a broad reserved power tantamount to a reserved life estate was intended to be included.

Although this argument is persuasive, we find no warrant in the plain words of the statute for making a distinction between narrow and broad powers. The decedent literally had a power to designate who should enjoy the income. A distinction such as suggested would introduce numerous complexities into the administration and interpretation of this section. The taxpayer would have us draw a line between a power to select among people named in the instrument and a power to select among people at large. But this would allow easy avoidance of the tax by careful draftsmanship without any change in substance. It would be a relatively simple matter to put in the instrument a list of persons which would cover practically anyone that the decedent might ever wish to designate. In interpreting an unambiguous statute we should not assume that Congress has acted so as to allow such easy avoidance of tax. Nor would any distinction based on the number of persons among whom the decedent might choose be sound as a matter of judicial interpretation. Thus, all the property transferred to the trust for the children after March 3, 1931, and the corpora of the 1937 trusts were rightly included in the gross estate.

To the extent to which the decedent retained a power to accumulate income in the trust for Mrs. Woolsey, his sister, it is the same as the other trusts. But it differs from the others, however, in that she was always to receive $2,500 per year out of income and principal, if necessary. The decedent could accumulate income only in excess of that amount. The Tax Court made what it considered the proper adjustment by discounting the value of the corpus of that trust by the value of the life annuity of Mrs. Woolsey. It was no doubt misled by the fact that the Commissioner, who had contended that all of the corpus of the trust for Mrs. Woolsey (including that part transferred before March 3, 1931, as well as after) should be included in the decedent's gross estate under [§2038], had excluded the value of the annuity. This may have been correct on the theory he was then pursuing that by the reservation of the power to invade in case of sickness or other emergency, the decedent had kept a string on the corpus in that he could give the corpus to her. But since she was entitled to a minimum of $2,500 per year which could come out of the corpus if necessary, this string was only over the difference between the entire corpus which he might conceivably give her and the annuity she was to receive in any event.

The Tax Court, however, held that [§2038] was not applicable but it nevertheless deducted the value of the annuity in applying [§2036]. We think the Tax Court erred by using an incorrect method of computing what proportion of the corpus should be included. The regulations provide that if the reservation of the right to designate pertains to a part only of the transferred property, or to a part only of income therefrom, only a corresponding proportion of the value of the transferred property is includible in the gross estate, Treas. Reg. §20.2036-1(a). Both

parties are essentially in agreement that the Tax Court's method was wrong, but there is however a dispute as to what is the proportion that should be included.

The taxpayer argues that a four percent rate should be postulated and, since the corpus ($34,668.40) at four percent would not yield $2,500, it maintains that no part of Mrs. Woolsey's trust should be included. We cannot agree that a four percent rate should always be assumed. The taxpayer relies on the regulations providing that in valuation of annuities, life estates, and remainders, a four percent rate is proper.* But it appears to us that the taxpayer has confused two different matters. Valuation of future interests is always a guess, though it should be an informed guess. Some rate must be assumed and the regulations generally postulate the four percent rate. But even in cases of valuation there are exceptions; and other rates will be used if some valid reason is shown for so doing, e.g., Hanley v. United States, 1945, 63 F. Supp. 73; Security-First National Bank v. Commissioner, 1937, 35 B.T.A. 815. Here the question is not one of determining the value of particular property; it is rather one of determining what portion of the property the decedent had in effect not completely relinquished because of his control of the income. There is no necessity for assuming an artificial rate when the actual income for past years can be ascertained. If for some reason the actual income over past years can not be determined, the Tax Court, whose function it is to find the facts, might be justified in assuming an average rate of four percent. But that is not our function as a reviewing court.

The Commissioner takes the position that the taxpayer has failed to show what part of the property should not be included because of the $2,500 annuity which the decedent could not control. He thus contends that there was a failure of proof and that the Tax Court was in error in failing to include all the property transferred after March 3, 1931, although he has not petitioned for review on this point. The Commissioner would thus have us affirm the decision of the Tax Court. We do not think that such action would be proper or in accord with the power given the circuit courts of appeal to remand for a rehearing if justice requires it. [§7482(c).] From the instrument, it is clear that the decedent could not control all the income, but only that in excess of $2,500. The part of the corpus transferred after March 3, 1931 necessary to produce the share of the $2,500 attributable to the post March 3, 1931 transfers should have been excluded. We see little difference between this type of reserved power and a power to designate half the income. There it seems clear that only one-half the corpus would be included. The same principle should have been applied here. We do not agree with the Commissioner's view that because the taxpayer failed to establish facts on which a fair apportionment can be made the Tax Court's determination at the erroneous figure should be sustained and this Court should not remand for further hearing. There is no support for the idea that the Commissioner's determination, which is clearly without rational foundation when applied where this portion of [§2036] is involved, should be enforced because the taxpayer has not shown the exact amount. . . .

The case is remanded to the Tax Court on this point for further proceedings.† That body may make findings as to whether the income realized ever exceeded $2,500 and thus determine whether in actuality the decedent retained any power. Even if the income did exceed $2,500 there should be excluded a proportionate part of the corpus necessary to produce an income of $2,500. . . .

MAGRUDER, Circuit Judge (dissenting in part).

* Regs. 105 §81.10(j). For decedents dying after December 31, 1951, the current Regulations provide that annuities, life estates, and remainders shall be valued on a $3\frac{1}{2}$ per cent basis. §20.2031-7. — ED.

† The proceedings on remand are not reported. — ED.

While the provisions of [§2036] and [§2038] overlap to some extent, it is important to stress that whenever [§2036] is applicable, the value of the corpus is included in the decedent's gross estate, whereas in the case of transfers falling within [§2038] there must be included only the value of the particular interests the enjoyment of which had been subject to a change through the exercise of a power in the decedent to alter, etc. Where the enjoyment of the primary life estate is subject to a power in the decedent to withhold the income and add it to principal, such power falls within the description of [§2038], and the value of the life estate must be included in decedent's gross estate. In the present case that would be true, it seems to me, as to all the transfers in trust, whether made before or after March 3, 1931.

But though the control which decedent had over the enjoyment of the life estates requires the value of those interests to be included in the gross estate, under [§2038], it does not follow that the same control requires the corpora of the trusts to be swept into the gross estate under [§2036]. The statutory language in [§2036], describing the power over income which has the tax consequence of requiring the corpus of the trust to be included as part of the decedent's gross estate, is markedly different from the language of [§2038].

As the opinion of the court points out, the amendment to [§2036] which Congress rushed through on March 3, 1931, was prompted by three decisions of the Supreme Court handed down March 2, 1931. Burnet v. Northern Trust Co., 283 U.S. 782; Morsman v. Burnet, 283 U.S. 783; McCormick v. Burnet, 283 U.S. 784. In the first two of these cases the grantor reserved to himself a life interest in the income (See Commissioner v. Northern Trust Co., 7 Cir., 41 F.2d 732 and Commissioner v. Morsman, 8 Cir., 44 F.2d 902); and the 1931 amendment to [§2036] covered these cases by providing that the value of the corpus should be included in the gross estate where the grantor had reserved to himself the possession or enjoyment of or the right to the income from the property transferred. In the *McCormick* case, supra, the trustees had been directed to accumulate the net income and add the same to the principal, subject, however, to the following provision:

> Said Trustee shall from time to time in each year pay out of said net income for charitable uses and purposes such sums and amount of money as said first party [the grantor] shall designate and request in writing, specifying to whom the same is to be paid and the particular charitable uses and purposes to which the same is to be applied.

The *McCormick* case obviously inspired the other phrase inserted by Congress in the 1931 amendment, "the right . . . to designate the persons who shall possess or enjoy . . . the income. . . ."

I agree with the court that the foregoing phrase cannot be limited to cases where the power to designate the persons who shall enjoy the income is unrestricted. Indeed, in the *McCormick* case, the power was not unrestricted, for there the income was to be accumulated by the trustees, subject only to a power in the decedent to direct that income to be paid to charities. The possible recipients of his bounty were thus limited to a class described in the trust instrument.

But it does not seem to me that a mere power to accumulate income aptly falls within the phrase "the right . . . to designate the persons who shall possess or enjoy . . . the income. . . ." I think it more likely that if Congress had intended that the reservation of this very familiar power should have the drastic consequence of requiring the inclusion in decedent's gross estate of the whole value of the corpus, it would have explicitly so provided. A power to withhold the income from the life tenant is not a power to designate who shall enjoy the

income. If the income is withheld from the life tenant and added to principal, no one will enjoy it as income. Nor does the power to accumulate income enable the holder of the power to designate who shall ultimately receive the same as augmented corpus. That is rigidly determined by the provisions of the trust instrument and is subject to contingencies which were beyond the control of the decedent. At any particular time when a decision is made not to pay income to the life tenant but to accumulate it, it could not be known who would ultimately benefit by such accumulation.

I therefore think that [§2038] applies here rather than [§2036].

NOTE

Note that nothing was included in respect of the property transferred by the grantor before 1931. The Treasury sought in the Tax Court to reach this property on the ground that the settlor's power to advance principal to the beneficiaries in case of sickness or other emergency was a power to "alter, amend, or revoke." This argument was rejected by the Tax Court. But the grantor also had the power to withhold income from three of the four principal beneficiaries. Was this a power to "alter, amend, or revoke"? The Tax Court did not deal specifically with this point; and since the government did not appeal, it could not have asked the Court of Appeals to reverse the Tax Court as to the pre-1931 transfers. Note Judge Magruder's dissenting opinion, and see the *Holmes' Estate* case, supra page 1145.

YAWKEY'S ESTATE v. COMMISSIONER

12 T.C. 1164 (1949)

[In 1935 the decedent and his wife created three trusts, one for each of their three granddaughters, naming themselves and their son-in-law as trustees. Each trust provided that until the beneficiary became 25, the trustees should pay for her benefit (or distribute to her, in their discretion) "such portion of the income as they deem for her best interest, retaining any balance not so used as an accumulation of income"; after the beneficiary reached the age of 25, the income was to be distributed to her quarterly. The trustees also had the power to transfer to the beneficiary, after she reached the age of 30, "such portions of the principal as in their judgment they deem for the best interest of the beneficiary." Upon the death of the income beneficiary, the corpus and any undistributed income of each trust was to go to her lineal descendants, with gifts over should there be no lineal descendants.]

OPPER, Judge: Whether any part of decedent's inter vivos transfers is to be included in the gross estate depends, as the case is presented and as we view the issues, on the answer to three questions. Respondent proposed the inclusion of the value at decedent's death of three trusts established by him for the benefit of his three granddaughters on two theories: First, that decedent, being a trustee, had a power alone or in conjunction with one of the two other trustees to alter, amend, or revoke the trusts, as envisaged by [§2038(a)(2)]; and, second, that in the same manner decedent had the right to designate the persons who should enjoy the income from the property within the meaning of [§2036(a)(2)]. Under the latter determination a smaller amount was proposed for inclusion, apparently because one of the three granddaughter beneficiaries had arrived at the age of 25 years when decedent died, and the trusts required the payment of all of the income to the respective beneficiaries upon their reaching that age.

Petitioner insists in the first place that decedent had no power or right in the premises because there was an adequate external standard by which the conduct of the trustees was to be measured and this so circumscribed their actions that

neither provision applies. This is the first question, and, if the contention prevailed, it would dispose of the entire controversy.

[The court held that the exercise by the trustees of their power was not governed by an enforceable external standard.]

For an additional reason, it is contended that [§2038] is inapplicable. This presents the second question. The clause upon which respondent relies for his conclusion that the enjoyment of the property was subject to alteration or termination through the exercise of a power by decedent is the provision permitting the trustees to transfer any part of the principal to a beneficiary after she becomes 30 years of age. At decedent's death all of the beneficiaries were under 30. The condition for the exercise of the power had accordingly not yet been fulfilled. Under authorities now too firmly established to question, a power based on such a future contingency does not suffice to bring the situation within [§2038]. Jennings v. Smith [supra p. 1155]; . . . And we find nothing in the language or result of the two cases recently decided by the Supreme Court to warrant a departure from the rule thus decisively settled. Commissioner v. Estate of Church, 335 U.S. 632; Estate of Spiegel v. Commissioner, 335 U.S. 701. The phraseology in these opinions most heavily relied upon by respondent[1] deals exclusively with title, possession, and enjoyment. This decedent could under no circumstances and in no contingency retain or recapture any of these attributes. The most that he could ever do and the most that respondent suggests that he could do was to change the title, possession, or enjoyment of the principal from the remaindermen to the life beneficiary. That would be an aspect of the transfers rendering them taxable, if the power existed currently, not under the survivorship theory of the *Hallock* case [309 U.S. 106], nor as intended to take effect at death, nor by retention of an interest in the income, cf. May v. Heiner, 281 U.S. 238, but under the express language of [§2038], which covers a power to alter or terminate. It thus resembles such cases as Jennings v. Smith, supra. But there is no assertion or implication of a reversionary interest in income or principal to assimilate the situation to that in the *Church* and *Spiegel* cases.

Most important, these cases dealt with [§2036], while the provision we are now considering is [§2038]. The difference in the statutory language seems to us, especially in the light of the decided cases, to carry decisive significance with respect to the time of the existence of decedent's retention. Section [2036] uses the language "for his life or for any period not ascertainable without reference to his death or for any period which does not in fact end before his death," whereas [§2038] employs the simple concept "at the date of his death." While it is true [§2038(b)] lists some legislative tests by which this approach may be considered as modified, it does not reach the present situation. Decedent's power

[1] ". . . In the *Church* case we stated that a trust transaction cannot be held to alienate all of a settlor's 'possession or enjoyment' under §811(c) [1939 Code] unless it effects 'a bona fide transfer in which the settlor, absolutely, unequivocally, irrevocably, and without possible reservations, parts with all of his title and all of his possession and all of his enjoyment of the transferred property. After such a transfer has been made, the settlor must be left with no present legal title in the property, no possible reversionary interest in that title, and no right to possess or to enjoy the property then or thereafter. In other words such a transfer must be immediate and out and out, and must be unaffected by whether the grantor lives or dies.' We add to that statement, if it can be conceived of as an addition, that it is immaterial whether such a present or future interest, absolute or contingent, remains in the grantor because he deliberately reserves it or because, without considering the consequences, he conveys away less than all of his property ownership and attributes, present or prospective. In either event the settlor has not parted with all of his presently existing or future contingent interests in the property transferred. He has therefore not made that 'complete' kind of trust transfer that §811(c) [1939 Code] commands as a prerequisite to a showing that he has certainly and irrevocably parted with his 'possession or enjoyment.' . . ." [Estate of Spiegel v. Commissioner, 335 U.S. 701.]

did not exist at his death under cases like Jennings v. Smith, supra . . . and its absence was not due to any such mere formality as the giving of notice or expiration of a formal waiting period. Cf. Estate of Paul Loughridge, 11 T.C. 968, 978. The inapplicability of the *Church* and *Spiegel* cases, dealing as they did with the entirely different language of [§2036], thus seems to us confirmed. Inclusion under [§2038] must accordingly be rejected.

The final proposition advanced by petitioner, presenting the third question, is that [§2036] is equally inapplicable both because decedent could not "designate" the persons who should enjoy the income, and, second, because he did not have "the right" to exercise it. The first statement is drawn from the provisions of the trust which, while permitting the trustees to withhold income from a life beneficiary under 25, require that it either be paid to her subsequently, or added to corpus. It is insisted that a complete designation of the ultimate taker is thus withheld from the trustees. The effect, however, of an addition to principal which was within the province of decedent and his cotrustees would be to shift the enjoyment from the life beneficiary to the ultimate taker of the principal, a remainderman whose identify might be indeterminate at the time but whose rights would thereby be tentatively fixed. Estate of Milton J. Budlong, supra. The "right" of decedent in the premises is questioned because decedent's two cotrustees could by their combined action frustrate any decision on his part under the majority rule established in the trust instrument. But if decedent joined with either of the other trustees, his action became effective. In our view that is what is meant by the statutory phrase "the right either alone or in conjunction with any person." Granted that decedent did not possess the right alone, it seems to us he clearly retained it in conjunction with the cotrustees. Estate of John Moir, 47 B.T.A. 765. We conclude that respondent's determination under [§2036], which, as we have said, affects only a portion of the transfers, was proper and must be sustained. . . .

NOTE

1. *Power to advance corpus to income beneficiary.* Although the power to accumulate the income of the third trust in *Yawkey's Estate* had expired because the beneficiary had reached the age of 25 before the decedent's death, the decedent had also reserved the power to advance corpus to the income beneficiary. If the power to withhold income is a power to "designate" who shall enjoy the income under §2036(a)(2), as the court holds, was the power to advance corpus also within §2036(a)(2) as a power to designate who shall enjoy the property? * (The power could not be exercised until the beneficiary reached the age of 30, an event that had not occurred when the decedent died, but the court holds that §2036, unlike §2038, does not require that the power be exercisable at the time of the decedent's death.) Assuming that the power to advance corpus was within §2036, would only the value of the entire trust be taxable, or would allowance have to be made for the value of the life interest? Note that under §2036 a power over the income alone brings the entire trust into the gross estate. Is there any reason why a power over the remainder alone should do less?

2. *Hager's Estate.* See again Commissioner v. Hager's Estate, supra page 1147. Note that the trusts were created in 1924. Would the case be decided in the same way today, now that the rule of May v. Heiner has been restored? If the grantor had retained the income for himself in 1924, when the trusts were created, they would not be reached by §2036(b). Should the lesser power to withhold or distribute the income result in a tax on the entire value of the trusts under §2038? Were the other powers retained by the

* Apparently the government did not make this argument: the deficiency notice claimed that the power to distribute or accumulate income was within the reach of both §2036 and §2038, but only §2038 was cited as authority for reaching the power to advance principal (12 T.C. at 1168-1169).

grantor sufficient by themselves to require the trusts to be included? See Covey, The Klauber Case and Sections 2036 (a)(1), 2037, and 2038 of the 1954 Code, 5 Tax Couns. Q. 129, 164 (1961):

> The decision [in *Hager's Estate*] was in error for in no event did decedent retain a power to affect the enjoyment of the original principal of the trust. This fact is reflected by the subsequent proceedings in the case itself. It was settled during the pendency of the estate's petition for certiorari on the basis of the value of the trust at decedent's death reduced by the original principal of the trust being included in decedent's gross estate.

3. *§2036 vs. §2038.* Would it matter whether the power to accumulate income of the two trusts that were included in the *Yawkey* case was taxed under §2036 or under §2038? If post-1931 transfers had been before the Supreme Court in Porter v. Commissioner, supra page 1144, Estate of Holmes v. Commissioner, supra page 1145, and Helvering v. City Bank Farmers Trust Co., supra page 1158, would §2036 have been applicable? What of the *Lober* case, supra page 1145? See Struthers v. Kelm, 218 F.2d 810 (8th Cir. 1955). Does §2036 reach all post-1931 transfers that can be reached by §2038? See Lewis, The Estate Tax (P.L.I. 1962) 63-66; Lewis, Transfers in Trust Under the New Estate Tax Law, 3 Amer. U. Tax Inst. 125, 130-131 (1951).

Section E. Transfers Taking Effect at Death: §2037

The scope of §2037. Section 2037, dealing with transfers taking effect at death, is a 1954 revision of a provision that came into the statute in 1949. From 1916 to 1949, transfers of the type now reached by §2037 were included in the gross estate only to the extent that they came within the postponed-possession-or-enjoyment clause as transfers "intended to take effect in possession or enjoyment at or after [the decedent's] death." See again page 1177 supra.

The scope of §2037 of present law can best be examined by assuming a transfer of this type: H transfers property in trust to pay the income to W, his wife, for her life; on W's death, the corpus is to be distributed to H if he is living; otherwise to S, H's son, or to S's estate. The requirement of §2037(a)(1) is satisfied, since S can obtain possession or enjoyment of the property only by surviving H, the transferor. Whether §2037(a)(2) is satisfied depends upon whether immediately before H's death the value of his reversionary interest exceeds 5 per cent of the value of the property. If H should die at 55 and if his wife is then 40, his reversionary interest would have been worth, immediately before his death, about 13 per cent of the value of the trust corpus. Put another way, the present worth of $1.00 due at the death of the younger of two persons, aged 55 and 40, provided the older survives, is about $0.13. If H dies at 55 when his wife is only 25, however, H's reversionary interest would have been worth, just before his death, slightly less than 5 per cent of the value of the corpus.* In the former case, since the decedent's reversionary interest was worth more than 5 per cent of the corpus, the trust would be includible under §2037. (The amount to be included would be the corpus less the value of the wife's life interest, since her interest was not dependent upon the husband's death.) In the latter case, however, since the reversionary interest was worth less than 5 per cent of the corpus, the trust would not be includible under §2037. Would the value of the husband's reversionary interest be includible under §2033?

The language of §2037 is relatively straightforward, presenting no more than

---

* The student who wishes to see how these values are derived, or to work out the appropriate factor for other ages, will find the formula set out in Example 6, Actuarial Values for Estate and Gift Tax (I.R.S. Publication No. 11, 1959) 10.

its fair share of minor difficulties. But why *are* these the tests for including transfers taking effect at death? Are there any similar transfers that escape §2037? If so, why? If this provision is amended, what form might the changes take? A study of the evolution of §2037 from the primitive postponed-possession-or-enjoyment clause (§811(c), 1939 Code) will aid in answering these questions; otherwise, §2037 is like a military order sent by a distant headquarters to a unit that must act on it in ignorance of its setting or purpose. On the other hand, the taxation of transfers taking effect at death has had so tortuous a history that abbreviation is essential. What follows is only a summary. For a complete history of the period 1916-1945, see Eisenstein, Estate Taxes and the Higher Learning of the Supreme Court, 3 Tax L. Rev. 395, 421-502 (1948); for later developments, see Bittker, The Church and Spiegel Cases: Section 811(c) Gets a New Lease on Life, 58 Yale L.J. 825 (1949), and Church and Spiegel: The Legislative Sequel, 59 id. 395 (1950).

The decedent's life as a measuring stick. By accident or otherwise, the first three cases in this area to reach the Supreme Court arrived in inverse order to the strength of the government's position. In Shukert v. Allen, 273 U.S. 545 (1927), the government maintained that a transfer in trust to accumulate the income for 30 years, with distribution of the corpus and accumulated income to be made to the settlor's children or their issue at that time, was includible in the transferor's estate. The settlor died shortly after creating the trust. Because the term of the trust was greater than the settlor's life expectancy (about 16 years) when the transfer was made, the government asserted that the transfer was "intended to take effect in possession or enjoyment at or after his death." The Supreme Court held to the contrary, but the ground of its decision was not altogether clear:

> The transfer was immediate and out and out, leaving no interest remaining in the testator. The trust in its terms has no reference to his death but is the same and unaffected whether he lives or dies. Although the Circuit Court of Appeals seems to have thought otherwise, the interest of the children respectively was vested as soon as the instrument was executed, even though it might have been divested as to any one of them in favor of this issue if any, or of the surviving beneficiaries, if he died before the termination of the trust. See Gray, The Rule Against Perpetuities, §108(3). It seems plain from the little evidence that was put in that the testator was not acting in contemplation of death as a motive for his act, or otherwise, except in the sense that he was creating a fund intended to secure his children from want in their old age, whoever might dissipate the considerable property that he retained and left at his death; and that being fifty-six years old, if he thought about it, he would have contemplated the possibility or probability of his being dead before the emergency might arise. Of course it was not argued that every vested interest that manifestly would take effect in actual enjoyment after the grantor's death was within the statute. There certainly is no transfer taking effect after his death to be taxed under [the clause relating to transfers intended to take effect in possession or enjoyment at or after death].
>
> It is not necessary to consider whether the petitioner goes too far in contending that this clause should be construed to refer only to transfers of property the possession or enjoyment of which does not pass from the grantor until his death. But it seems to us tolerably plain, that when the grantor parts with all his interest in the property to other persons in trust, with no thought of avoiding taxes, the fact that the income vested in the beneficiaries was to be accumulated for them instead of being handed to them to spend, does not make the trust one intended to take effect in possession or enjoyment at or after the grantor's death. [273 U.S. at pp. 547-548.]

Believing that it might have lost Shukert v. Allen because the term of the trust (30 years) was not expressly linked to the settlor's death, the government soon sought review of another decision involving five trusts whose terms were depend-

ent on the settlor's death. Reinecke v. Northern Trust Co., 278 U.S. 339 (1929). The decedent had created five trusts,* four of which were to end five years after his death or upon the death of the life tenants, whichever occurred first. The fifth trust was to terminate five years after his death or upon the death of the life tenant, whichever occurred later. The Court held that these five trusts were not reached by the postponed-possession-or-enjoyment clause:

But the question much pressed upon us remains, whether, the donor having parted both with the possession and his entire beneficial interest in the property when the trust was created, the mere passing of possession or enjoyment of the trust fund from the life tenants to the remaindermen after the testator's death, as directed, and after the enactment of the statute, is included within its taxing provisions. That question, not necessarily involved, was left unanswered in Shukert v. Allen, 273 U.S. 545. There the gift of a remainder interest, having been made without reference to the donor's death, although it did in fact vest in possession and enjoyment after his death, was held not to be a transfer intended to take effect in possession or enjoyment at or after the donor's death, and for that reason not to be subject to the tax. But here the gift was intended to so take effect, although the transfer which effected it preceded the death of the settlor and was itself not subject to the tax unless made so by the circumstances that the possession or enjoyment passed as indicated.

In its plan and scope the tax is one imposed on transfers at death or made in contemplation of death and is measured by the value at death of the interest which is transferred. . . . It is not a gift tax, and the tax on gifts once imposed by the Revenue Act of 1924 has been repealed, 44 Stat. 126. One may freely give his property to another by absolute gift without subjecting himself or his estate to a tax, but we are asked to say that this statute means that he may not make a gift inter vivos, equally absolute and complete, without subjecting it to a tax if the gift takes the form of a life estate in one with remainder over to another at or after the donor's death. It would require plain and compelling language to justify so incongruous a result and we think it is wanting in the present statute.

It is of significance, although not conclusive, that . . . the tax [is imposed] on the net estate of decedents, and that the miscellaneous items of property required . . . to be brought into the gross estate for the purpose of computing the tax, unless the present remainders be an exception, are either property transferred in contemplation of death or property passing out of the control, possession or enjoyment of the decedent at his death. They are property held by the decedent in joint tenancy or by the entirety, property of another subject to the decedent's power of appointment, and insurance policies effected by the decedent on his own life, payable to his estate or to others at his death. The two sections, read together, indicate no purpose to tax completed gifts made by the donor in his lifetime not in contemplation of death, where he had retained no such control, possession or enjoyment. In the light of the general purpose of the statute and the language of [§2033] explicitly imposing the tax on net estates of decedents, we think it at least doubtful whether the trusts or interests in a trust intended to be reached by the phrase in [§811(e), 1939 Code] "to take effect in possession or enjoyment at or after his death," include any others than those passing from the possession, enjoyment or control of the donor at his death and so taxable as transfers at death under [§2033]. That doubt must be resolved in favor of the taxpayer. . . . Doubts of the constitutionality of the statute, if construed as contended by the government, would require us to adopt the construction, at least reasonably possible here, which would uphold the act. [278 U.S. at 347-349.]

After Reinecke v. Northern Trust Co. was decided, the government gave up the effort to tax transfers merely because they were contingent on the transferor's death — where his life was only a measuring stick, as it were. Nor did the

* Two other trusts involved in the same case were revocable, and were held to be includible in the gross estate. The five trusts described in the text were revocable with the consent of the beneficiaries, but this power was held irrelevant under the statute then in effect. Supra page 1159, note.

Treasury ask Congress to change the law, possibly because of the constitutional doubts voiced in the last sentence quoted above. Not until 1949, as will be seen, was this type of transfer again threatened by the estate tax.

In the meantime, the government sought to make the most of the statements in Shukert v. Allen and Reinecke v. Northern Trust Co. that the proper province of the postponed-possession-or-enjoyment clause was the transfer under which possession or enjoyment passes "from" the transferor at his death. One branch of the Treasury's attack was on transfers with reservation of income; this attack was routed in 1931 by May v. Heiner, as is described supra page 1178, and Congress had to come to the aid of the Treasury by enacting what is now §2036. The other type of transfer which the Treasury sought to tax after Reinecke v. Northern Trust Co. was the trust with a reversionary interest retained by the transferor, the type described at the beginning of this section. If such a transfer was not reached by the postponed-possession-or-enjoyment clause, the Treasury might have reasoned, what *was* that clause's function?

The early "reversionary interest" cases. In seeking to apply the statutory phrase to transfers with reversionary interests, the Treasury seemed at long last to be on the right track. In Klein v. United States, 283 U.S. 231 (1931), the Supreme Court unanimously held for the government with respect to such a transfer. The grantor had created a trust to pay the income to his wife for her life. At her death, the property was to revert to the grantor if living; but if he predeceased her, she was to get the property in fee simple. He died before his wife, and the court held that the property was includible in his estate:

> Nothing is to be gained by multiplying words in respect of the various niceties of the art of conveyancing or the law of contingent and vested remainders. It is perfectly plain that the death of the grantor was the indispensable and intended event which brought the larger estate [i.e., fee simple ownership rather than a life estate] into being for the grantee and effected its transmission from the dead to the living, thus satisfying the terms of the taxing act and justifying the tax imposed. [283 U.S. at 234.]

But only four years later, the "niceties of the art of conveyancing" turned out to be more durable, and profitable, than was thought. The Supreme Court was asked to review two cases, each involving a trust to pay the income to a child of the grantor for the child's life. In one, Helvering v. St. Louis Union Trust Co., 296 U.S. 39 (1935), there were gifts over on the child's death, but if the child predeceased the settlor, the trust was to terminate and the property was to revert to the settlor. The settlor predeceased the life tenant. The Supreme Court, by a 5-to-4 vote, held that the property was not includible:

> The grantor here, by the trust instrument, left in himself no power to resume ownership, possession, or enjoyment, except upon a contingency in the nature of a condition subsequent, the occurrence of which was entirely fortuitous so far as any control, design, or volition on his part was concerned. After the execution of the trust he held no right in the trust estate which in any sense was the subject of testamentary disposition. His death simply put an end to what, at best, was a mere possibility of a reverter by extinguishing it; that is to say, by converting what was merely possible into an utter impossibility. [296 U.S. at 43.]*

The *Klein* case was distinguished on the ground that:

> only a life estate was vested, the remainder being retained by the grantor; and whether that should ever become vested in the grantee depended upon the condition precedent that the grantor die during the life of the grantee. The grantor having died first, his death clearly effected a transmission of the larger estate to the grantee. But here the

---

* The other case, Becker v. St. Louis Union Trust Co., 296 U.S. 48 (1935), involved a similar trust and was decided in the same way. — ED.

grantor parted with the title and all beneficial interest in the property, retaining no right with respect to it which would pass to any one as a result of his death. Unlike the *Klein* case, where the death was the generating source of the title, here, as the court below said, the trust instrument and not the death was the generating source. The death did not transmit the possibility, but destroyed it. [296 U.S. at 45-46.]

Helvering v. Hallock: the end of verbal niceties? There was, clearly enough, only a verbal distinction between taxable *Klein* reversionary interests (retained by the grantor subject to divestment if he predeceased the beneficiary) and non-taxable *St. Louis Union Trust Co.* reversionary interests (contingent on the beneficiary's predeceasing the settlor). The distinction was administratively unworkable, and within five years the problem was back in the Supreme Court when certiorari was granted in three cases involving reversionary interests created by diverse legal formulas. Under the style of Helvering v. Hallock, 309 U.S. 106 (1940), the Supreme Court decided all three cases for the government:

The terms of these grants [in the cases before the Court] differ in detail from one another, as all three differ from the formulas of conveyance used in the *Klein* and *St. Louis Trust* cases. It therefore becomes important to inquire whether the technical forms in which interests contingent upon death are cast should control our decision. If so, it becomes necessary to determine whether the differing terms of conveyance now in issue approximate more closely those used in the *Klein* case and are therefore governed by it, or have a greater verbal resemblance to those that saved the tax in the *St. Louis Trust* cases. Such an essay in linguistic refinement would still further embarrass existing intricacies. It might demonstrate verbal ingenuity, but it could hardly strengthen the rational foundations of law. The law of contingent and vested remainders is full of casuistries. There are great diversities among the several states as to the conveyancing significance of like grants; sometimes in the same state there are conflicting lines of decision, one series ignoring the other. Attempts by the Board of Tax Appeals and the Circuit Courts of Appeals to administer [§811(c), 1939 Code, the postponed-possession-or-enjoyment clause] by reference to these distinctions abundantly illustrate the inevitable confusion. One of the cases at bar, No. 399, reveals vividly the snares which inevitably await an attempt to base estate tax law on the "niceties of the art of conveyancing." In connection with the ascertainment of its own death duties, the Supreme Court of Errors of Connecticut defined the nature of the interest which the decedent in that case retained after his inter vivos transfer. Bryant v. Hackett, 118 Conn. 233; 171 A. 664. And yet the nature of that interest under Connecticut law and the scope of the Connecticut court's adjudication of that interest were made the subject of lively controversy before us. The importation of these distinctions and controversies from the law of property into the administration of the estate tax precludes a fair workable tax system. Essentially the same interests, judged from the point of view of wealth, will be taxable or not, depending upon elusive and subtle casuistries which may have their historic justification but possess no relevance for tax purposes. These unwitty diversities of the law of property derive from medieval concepts as to the necessity of a continuous seisin. Distinctions which originated under a feudal economy when land dominated social relations are peculiarly irrelevant in the application of tax measures now so largely directed toward intangible wealth.

Our real problem, therefore, is to determine whether we are to adhere to a harmonizing principle in the construction of [§811(c), 1939 Code] or whether we are to multiply gossamer distinctions between the present cases and the three earlier ones. Freed from the distinctions introduced by the *St. Louis Trust* cases, the *Klein* case furnishes such a harmonizing principle. Does, then, the doctrine of *stare decisis* compel us to accept the distinctions made in the *St. Louis Trust* cases as starting point for still finer distinctions spun out of the tenuousities of surviving feudal law? We think not. We think the *Klein* case rejected the presupposition of such distinctions for the fiscal judgments which [§811(c), 1939 Code] demands.

We recognize that stare decisis embodies an important social policy. It represents an element of continuity in law, and is rooted in the psychologic need to satisfy reasonable expectations. But stare decisis is a principle of policy and not a mechanical formula of

adherence to the latest decision, however recent and questionable, when such adherence involves collision with a prior doctrine more embracing in its scope, intrinsically sounder, and verified by experience.

Nor have we in the *St. Louis Trust* cases rules of decision around which, by the accretion of time and the response of affairs, substantial interests have established themselves. No such conjunction of circumstances requires perpetuation of what we must regard as the deviations of the *St. Louis Trust* decisions from the *Klein* doctrine. We have not before us interests created or maintained in reliance on those cases. We do not mean to imply that the inevitably empiric process of construing tax legislation should give rise to an estoppel against the responsible exercise of the judicial process. But it is a fact that in all the cases before us the settlements were made and the settlors died before the *St. Louis Trust* decisions.*

Nor does want of specific Congressional repudiation of the *St. Louis Trust* cases serve as an implied instruction by Congress to us not to reconsider, in the light of new experience, whether those decisions, in conjunction with the *Klein* case, make for dissonance of doctrine. It would require very persuasive circumstances enveloping Congressional silence to debar this Court from re-examining its own doctrines. To explain the cause of non-action by Congress when Congress itself sheds no light is to venture into speculative unrealities. Congress may not have had its attention directed to an undesirable decision; and there is no indication that as to the *St. Louis Trust* cases it had, even by any bill that found its way into a committee pigeon-hole. Congress may not have had its attention so directed for any number of reasons that may have moved the Treasury to stay its hand. But certainly such inaction by the Treasury can hardly operate as a controlling administrative practice, through acquiescence, tantamount to an estoppel barring reëxamination by this Court of distinctions which it had drawn. Various considerations of parliamentary tactics and strategy might be suggested as reasons for the inaction of the Treasury and of Congress, but they would only be sufficient to indicate that we walk on quicksand when we try to find in the absence of corrective legislation a controlling legal principle.

This Court, unlike the House of Lords, has from the beginning rejected a doctrine of disability at self-correction. Whatever else may be said about want of Congressional action to modify by legislation the result in the *St. Louis Trust* cases, it will hardly be urged that the reason was Congressional approval of those distinctions between the *St. Louis Trust* and the *Klein* cases to which four members of this Court could not give assent. By imputing to Congress a hypothetical recognition of coherence between the *Klein* and the *St. Louis Trust* cases, we cannot evade our own responsibility for reconsidering, in the light of further experience, the validity of distinctions which this Court has itself created. Our problem then is not that of rejecting a settled statutory construction. The real problem is whether a principle shall prevail over its later misapplications. Surely we are not bound by reason or by the considerations that underlie stare decisis to persevere in distinctions taken in the application of a statute which, on further examination, appear consonant neither with the purposes of the statute nor with this Court's own conception of it. We therefore reject as untenable the diversities taken in the *St. Louis Trust* cases in applying the *Klein* doctrine — untenable because they drastically eat into the principle which those cases professed to accept and to which we adhere. [309 U.S. at 116-122.]

Chief Justice Stone concurred in the result on the ground that the *Klein* case was controlling in all instances before the Court. Justices Roberts and McReynolds dissented, asserting that there was a difference "of substance, not merely of

* The Treasury Department subsequently provided by regulation that property transferred between November 11, 1935 (the date of the decisions in the *St. Louis Union Trust Co.* cases), and January 29, 1940 (the date of the *Hallock* decision), would not be taxed if (a) the Commissioner determines that the transfer was made in the image of the *St. Louis Union Trust Co.* limitations rather than on the *Klein* model, and (b) the transfer was reported as a completed gift without allowance for the donor's reversionary interest. The Commissioner's determination is final. Regs. §20.2037-1(h). See Internal Revenue Code §7805(b) and Helvering v. Griffiths, 318 U.S. 371, 397-399 (1943). — Ed.

terminology" between the *Klein* and *St. Louis Union Trust Co.* trusts, but that even if there were not, the *St. Louis Union Trust Co.* cases should be preserved out of respect for the doctrine of stare decisis and because Congress had re-enacted the statute without change after these cases were decided.

Questions after Hallock. The *Hallock* case at first seemed to be the final step of a long journey; now we know that it was only the end of the beginning. Two questions that particularly called for decision were these:

1. Did the statute reach a reversionary interest that was not expressly reserved by the grantor but instead arose by operation of law? In the cases passed on by the Supreme Court, the reversionary interest had been created by the express language of the trust indenture. But what if H transfers property in trust to pay the income to W for H's life, remainder to H's children living at the time of his death, with no gift over if the children all predecease H? In these circumstances H would have a reversionary interest by operation of law. It was argued that such a trust was not reached by the statute, however, at least not without proof that the transfer was "intended" to take effect in possession or enjoyment at or after death. It was of course possible H had no intention of reserving anything, and that his reversionary interest existed only because the draftsman failed to provide for a final gift over. But even an *express* reservation of a reversionary interest might result from a draftsman's caution and not from the settlor's deliberation, and the *Hallock* case did not make any inquiry into the question of whether the reversionary interests there involved were *deliberately* retained.

2. Was the "remoteness" of the reversionary interest relevant?* The principal Supreme Court cases had all concerned settlors who would recapture transferred property if they outlived a wife or a child. The possibility of survivorship was sufficiently substantial so that the settlor might have retained the reversionary interest deliberately, and perhaps a conclusive presumption that the transfer was "intended" to take effect in possession or enjoyment at or after his death was warranted. But what if a settlor transfers property in trust for his wife for his life, remainder to her if she survives him, otherwise to those of his children and their issue who survive him, with a reversionary interest in the settlor's estate if his wife, his children, and the issue of his children all predecease him? See Estate of Goodyear v. Commissioner, 2 T.C. 885 (1943), where a trust fund of about $350,000 would have reverted to the decedent only if she had survived a son, four grandchildren, and their issue, eight great-grandchildren being alive at the time of her death; the value of the reversionary interest was $0.0000000000876. If the settlor's reversionary interest was virtually worthless, because conditioned on a remote possibility, was the transfer "intended to take effect in possession or enjoyment at or after his death," as that clause was interpreted in the *Hallock* case?

The answers to Hallock's questions: Church and Spiegel. In October, 1947, Spiegel's Estate v. Commissioner, 335 U.S. 701 (1949), and Commissioner v. Church, 335 U.S. 632 (1949), which raised both of these questions, were argued in the Supreme Court. In both cases, the government asserted that the grantor of a trust possessed a remote reversionary interest arising by operation of law, because the instrument of transfer did not provide for all contingencies. In the *Spiegel* case, the corpus was worth about $1.1 million when the decedent died, and its inclusion in the estate produced an estate tax of about $450,000; the grantor's reversionary interest (dependent on outliving his children and their issue) was

* In 1945, the Supreme Court said in several cases that the remoteness of the decedent's reversionary interest was irrelevant. But there were certain special circumstances in these cases that led some observers to think that the issue was not yet foreclosed. See Bittker, The Church and Spiegel Cases: Section 811(c) Gets a New Lease on Life, 58 Yale L.J. 825, 836 n.65 (1949).

worth $4500 when the trust was created and about $85 just before he died.* On the last day of the 1947 term, the Supreme Court ordered reargument (68 Sup. Ct. 1522, 1524), requesting counsel to discuss nine questions which in effect inquired whether the Court had been mistaken in its view of the postponed-possession-or-enjoyment clause in every important case before Helvering v. Hallock. The cases were reargued in accordance with these orders in October, 1948, and were decided in January, 1949. In deciding the *Church* case, in which the decedent had not only a reversionary interest but also a pre-1931 life estate, the Court (three justices dissenting) did not confine itself to the reversionary interest issue, but decided the case by overruling May v. Heiner, as stated supra page 1181. Referring to the fact that Church had retained a life estate in the transferred property, the Court said:

> How is it possible to call this trust transfer "complete" except by invoking a fiction? Church was sole owner of the stocks before the transfer. Probably their greatest property value to Church was his continuing right to get their income. After legal title to the stocks was transferred, somebody still owned a property right in the stock income. That property right did not pass to the trust beneficiaries when the trust was executed; it remained in Church until he died. He made no "complete" gift effective before that date, unless we view the trust transfer as a "complete" gift to the trustees. But Church gave the trustees nothing, either partially or completely. He transferred no right to them to get and spend the stock income. And under the teaching of the *Hallock* case, quite in contrast to that of May v. Heiner, passage of the mere technical legal title to a trustee is not necessarily crucial in determining whether and when a gift becomes "complete" for estate tax purposes. Looking to substance and not merely to form, as we must unless we depart from the teaching of *Hallock,* the inescapable fact is that Church retained for himself until death a most valuable property right in these stocks — the right to get and to spend their income. Thus Church did far more than attach a "string" to a remotely possible reversionary interest in the property, a sufficient reservation under the *Hallock* rule to make the value of the corpus subject to an estate tax. Church did not even risk attaching an unbreakable cable to the most valuable property attribute of the stocks, their income. He simply retained this valuable property, the right to the income, for himself until death, when, for the first time the stock with all its property attributes "passed" from Church to the trust beneficiaries. Even if the interest of Church was merely "obliterated," in May v. Heiner language, it is beyond all doubt that simultaneously with his death, Church no longer owned the right to the income; the beneficiaries did. It had then "passed." It never had before. For the first time, the gift had become "complete."
>
> Thus, what we said in *Hallock* was not only a repudiation of the reasoning which was advanced to support the two cases (*St. Louis Trust and Becker*) that *Hallock* overruled, but also a complete rejection of the rationale of May v. Heiner on which the two former cases had relied. *Hallock* thereby returned to the interpretation of the "possession or enjoyment" section under which an estate tax cannot be avoided by any trust transfer except by a bona fide transfer in which the settlor, absolutely, unequivocally, irrevocably, and without possible reservations, parts with all of his title and all of his possession and all of his enjoyment of the transferred property. After such a transfer has been made, the settlor must be left with no present legal title in the property, no possible reversionary interest in that title, and no right to possess or to enjoy the property then or thereafter. In other words such a transfer must be immediate and out and out, and must be unaffected by whether the grantor lives or dies. See Shukert v. Allen, 273 U.S. 545, 547; Smith v. Shaughnessy, 318 U.S. 176. [335 U.S. at 644-646.]

Unlike Church, Spiegel had not retained a life interest. In deciding the *Spiegel* case, therefore, the Court had to decide the effect of a remote reversionary interest arising by operation of law. It held that reversionary interests arising by

* The existence of a reversionary interest was disputed in both cases; the Supreme Court accepted a lower court determination that there was one in the *Spiegel* case, and did not reach this issue in the *Church* case.

operation of law were as fatal as those that were expressly reserved, and that the remoteness of the decedent's interest was irrelevant:

First. In Commissioner v. Church, we have discussed the *Hallock* holding in relation to the scope of the "possession or enjoyment" provision of §811(c) [1939 Code] and need not elaborate what we said there. What we said demonstrates that the taxability of a trust corpus under this provision of §811(c) does not hinge on a settlor's motives, but depends on the nature and operative effect of the trust transfer. In the *Church* case we stated that a trust transaction cannot be held to alienate all of a settlor's "possession or enjoyment" under §811(c) unless it effects "a bona fide transfer in which the settlor, absolutely, unequivocally, irrevocably, and without possible reservations, parts with all of his title and all of his possession and all of his enjoyment of the transferred property. After such a transfer has been made, the settlor must be left with no present legal title in the property, no possible reversionary interest in that title, and no right to possess or to enjoy the property then or thereafter. In other words such a transfer must be immediate and out and out, and must be unaffected by whether the grantor lives or dies." We add to that statement, if it can be conceived of as an addition, that it is immaterial whether such a present or future interest, absolute or contingent, remains in the grantor because he deliberately reserves it or because, without considering the consequences, he conveys away less than all of his property ownership and attributes, present or prospective. In either event the settlor has not parted with all of his presently existing or future contingent interests in the property transferred. He has therefore not made that "complete" kind of trust transfer that §811(c) commands as a prerequisite to a showing that he has certainly and irrevocably parted with his "possession or enjoyment." Any requirement less than that which we have outlined, such as a postdeath attempt to probe the settlor's thoughts in regard to the transfer, would partially impair the effectiveness of the "possession or enjoyment" provision as an instrument to frustrate estate tax evasions. To this extent it would defeat the precise purpose for which the provision was originated and which prompted Congress to include it in §811(c). . . .

Second. It is contended that since the monetary value of the settlor's contingent reversionary interest is small in comparison with the total value of the corpus, the possession or enjoyment provision of §811(c) should not be applied. But inclusion of a trust corpus under that provision is not dependent upon the value of the reversionary interest. . . . The question is not how much is the value of a reservation, but whether after a trust transfer, considered by Congress to be a potentially dangerous tax evasion transaction, some present or contingent right or interest in the property still remains in the settlor so that full and complete title, possession or enjoyment does not absolutely pass to the beneficiaries until at or after the settlor's death. [335 U.S. at 705-707.]

There were forceful dissents in both cases. See Bittker, The *Church* and *Spiegel* Cases: Section 811(c) Gets a New Lease on Life, 58 Yale L.J. 825 (1949).

The legislative sequel to Church and Spiegel: Technical Changes Act of 1949. As soon as the *Church* and *Spiegel* cases were decided, speculation commenced on whether Reinecke v. Northern Trust Co. had been overruled sub silentio.* When the Supreme Court said that to avoid the postponed-possession-or-enjoyment clause, a transfer "must be unaffected by whether the grantor lives or dies," did it mean that a transfer was taxable if (as in the *Northern Trust Co.* case) the grantor's life was used as a yardstick to measure the term of a trust, even though the grantor reserved no interest for himself? Even if the Supreme Court did not intend to take this step, was there any reason to tax the trust in the *Spiegel* case, which was to terminate on the grantor's death, because he would recapture the corpus in the highly unlikely event that he outlived his children and their issue, but exclude a trust that was identical in all respects except that the virtually worthless reversionary interest was vested in someone else? The im-

* It had been previously argued, without success, that the *Northern Trust Co.* case had been overruled by implication by *Hallock.* Commissioner v. Lasker's Estate, 141 F.2d 889 (7th Cir. 1944).

pact of the *Spiegel* case on Reinecke v. Northern Trust Co. was not settled by the judiciary, however, because Congress intervened by enacting the Technical Changes Act of 1949. It has already been pointed out, supra page 1181, that this statute commenced the task of obliterating the *Church* case. It was more generous to the *Spiegel* case. For transfers after October 7, 1949, it provided that the transferred property would be included if the transferee was required to survive the transferor to obtain possession or enjoyment of the property. Thus Reinecke v. Northern Trust Co. was overruled prospectively.* A transfer to trustees to accumulate the income during the settlor's life, with distribution to the son or the son's estate to be made on the settlor's death, was taxable under this part of the 1949 Act, even though the decedent retained no interest of any type. In the case of transfers made on or before October 7, 1949, however, the 1949 Act rejected the sweeping position of the *Spiegel* case. Such transfers were not to be included in the gross estate unless the reversionary interest (a) arose by the express terms of the instrument of transfer and not by operation of law, and (b) had a value immediately before the decedent's death of more than 5 per cent of the value of the transferred property. The 1949 legislation is discussed in detail in Bittker, Church and Spiegel: The Legislative Sequel, 59 Yale L.J. 395 (1950); Pavenstedt, Congress Deactivates Another Bombshell: The Mitigation of Church and Spiegel, 5 Tax L. Rev. 309 (1950).

The 1954 legislation: restoration of Reinecke v. Northern Trust Co. In 1954, Congress intervened once more. Section 2037 of the 1954 Code retained the 1949 rules for transfers on or before October 7, 1949, but revised the treatment of transfers made after October 7, 1949. The rule of Reinecke v. Northern Trust Co. was restored, so that the use of the settlor's life as a measuring stick is not fatal unless a reversionary interest was retained, and the 5 per cent rule was extended to post-1949 transfers, but it is applicable to interest arising by operation of law as well as to those created by the express language of the instrument of transfer. In recommending this change, the Senate Finance Committee said:

Where the decedent has disposed of all, or substantially all, of his rights to property long before his death, it appears unduly harsh to subject the property to estate tax merely because the ultimate taker of the property is determined at the time of the decedent's death. (S. Rept., p. 123.) Is §2037(a), as amended in 1954, a sound solution to this problem? Was the 1949 legislation better? Would it be sounder policy instead to tax only the actuarial value, just before death, of the reversionary interest?

COMMISSIONER v. MARSHALL'S ESTATE

203 F.2d 534 (3d Cir. 1953)

Before MARIS, KALODNER and HASTIE, Circuit Judges.

KALODNER, Circuit Judge.

This is a petition of the Commissioner of Internal Revenue to review a decision of the Tax Court of the United States.

It poses the question whether any part of certain properties held under two trusts created [in 1931] by the settlor-decedent, Charles D. Marshall, a resident

---

* Reinecke v. Northern Trust Co., supra page 1143, warned of a constitutional problem if Congress attempted to impose an estate tax on such transfers. In the *Bullard* case, supra page 1180, however, the Supreme Court said: "Since Congress may lay an excise upon gifts it is of no significance that the exaction is denominated an estate tax or is found in a statute purporting to levy an estate tax." Does this rationale dispose of the constitutional doubts expressed in the *Northern Trust Co.* case? Lowndes, The Constitutionality of the New Federal Estate Tax Definition of a Transfer Taking Effect at Death, 3 Vand. L. Rev. 203 (1950).

of Pennsylvania, for his wife, Dora, is includible in his gross estate under Section 811(c)(1)(C) of the [1939] Internal Revenue Code.*

The nub of the controversy is the provision in the trusts that in the event Mrs. Marshall did not exercise granted general powers of appointment the property was to go "to such person or persons as would be entitled thereto under the intestate law of the State of Pennsylvania if she had at that time died seized and possessed of the trust estate," and the fact that under the intestate law of Pennsylvania Marshall would have been entitled to one-third of his wife's estate.

The Tax Court, three judges dissenting, ruled against the inclusion of any part of the trust properties in Mr. Marshall's estate.† In doing so it found . . . that the decedent had not by "express terms" retained a reversionary interest in the trust property and that the reversionary interest, if any, existed by reason of operation of law.

The pertinent facts may be summarized as follows:

Marshall died on May 16, 1945, while a resident of Pennsylvania. He was survived by Mrs. Marshall and six children. . . .

In March, 1931, Marshall created two trusts [providing] that the income from a specified part of each trust should be paid to Mrs. Marshall for life and at her death the trusts were to terminate as to those parts and the trustee was to

> . . . pay over and distribute the same in such manner and in such proportions as she shall by her last will and testament direct, limit, and appoint, and, in default of such appointment, shall pay over and distribute the same to such person or persons as would be entitled thereto under the intestate law of the State of Pennsylvania if she had at that time died seized and possessed of the trust estate.

The intestate law of Pennsylvania in effect at the time of the execution of the two trusts provided that a surviving spouse is entitled to one-third of the estate of a deceased spouse where more than one child or one child and the issue of a deceased child survive.

Mrs. Marshall, on January 26, 1943, relinquished the power of appointment given her by the trust deeds.

The fair market value of Mrs. Marshall's interest in the two trusts at the time of the transfers was [$616,000], and at the date of the decedent's death was [$605,000]. The value of Mrs. Marshall's life interest at the latter date was [$155,000].

The Commissioner originally, in determining the deficiency, included in the gross estate [$450,000] representing the value of the remainder interest after the life estate of Mrs. Marshall in the two trusts. He later . . . at the hearing before the Tax Court, reduced his claim to [$150,000], conceding that the latter was the maximum amount which could have reverted to Marshall under the then (and present) Pennsylvania intestate law.

On this review the Commissioner contends the Tax Court erred in determining (1) the asserted reversionary interest arose by operation of law and not by express terms of the deeds of trust and (2) the indications were that Marshall was not

* Section 811(c)(1)(C), as it stood after enactment of the Technical Changes Act of 1949, contained the postponed-possession-or-enjoyment clause, and §811(c)(2) provided that a transfer intended to take effect in possession or enjoyment at or after the transferor's death was includible (if made on or before October 7, 1949) only if the decedent "retained a reversionary interest in the property, arising by the express terms of the instrument of transfer and not by operation of law, and the value of such reversionary interest immediately before the death of the decedent exceeds 5 per centum of the value of such property." — Ed.

† The Tax Court found that the trusts were intended by Mr. Marshall to compensate his wife and children for certain advances they had made to him in 1930, but this aspect of the case is not presently relevant. — Ed.

thinking of himself and had no intention to retain a reversionary interest. . . .

In reply to the Commissioner's contention the taxpayer asserts that the Tax Court's decision should be affirmed, not only for the reasons which it assigned in its opinion, but also because the necessary survivorship test for includibility under Section 811(c)(1)(C) [1939 Code] is not satisfied.

Upon consideration of the record, the provisions of Section 811 [1939 Code] and their legislative history, we are of the opinion that the Tax Court's decision should be affirmed.

First, we are in accord with the Tax Court's determination that Marshall had not by express terms retained a reversionary interest nor indicated a conscious intent to affect such a retention. Second, we are of the opinion that the necessary survivorship test for includibilty was not met.

On the first score:

It would serve no useful purpose to restate here what has been so well said by the Tax Court in its opinion with reference to its determination that Marshall had not "by express terms" retained a reversionary interest. . . .

It is well-settled that words used in a statute must be considered to have been used by Congress in consonance with the common acceptance of the meaning of such words. Application of that principle to the instant case can have but one result. Section 811(c)(2) provides that "An interest in property of which the decedent made a transfer, on or before October 7, 1949, intended to take effect in possession or enjoyment at or after his death shall not be included in his gross estate . . . unless the decedent has retained a reversionary interest in the property, arising by the *express terms* of the instrument of transfer and not by operation of law. . . ." (Emphasis supplied.) The word "express" means "directly and distinctly stated; expressed, not merely implied or left to inference"; and "that is express which is worded with intention."

Clearly there was not a reservation "by express terms" in the instant case. The Commissioner does not even attempt to argue here that there was a retention of a reversionary interest by express terms. What he does say is that "The decedent, clearly had retained a *possibility* of reverter in the trust corpus." While he ignores the requirement that there must be a retention "by express terms" we, of course, cannot do so. The statute has spelled out the requirement that retention of a reverter must be "by the express terms" and "express" and "possibility" cannot be construed as synonymous by any stretch of the imagination.

On the second score:

As previously stated, the Tax Court based its decision on the fact that there had not been a retention of reverter by "express terms" and for that reason apparently did not consider it necessary to rule on the taxpayer's further contention that the transfers made by Marshall were not "intended to take effect in possession or enjoyment at or after his death" within the meaning of Section 811(c)(1)(C).

The taxpayer has asked us on this review to consider the latter question. The sum and substance of its contention in this respect is that a transfer does not come within Section 811(c)(1)(C) unless the beneficiaries must survive the decedent to obtain possession or enjoyment of the transferred interest and in the instant case if the intestate law had been changed, or if decedent had divorced or failed to support his wife, the beneficiaries could have taken the entire remainder even if they had not survived the decedent.

In our view the taxpayer is correct in its contention that the transfer was not intended to take effect in possession or enjoyment at or after the decedent's death. The "necessary survivorship" rule became part of the Treasury Regulations in 1946, when the so-called "Hallock" regulations were promulgated. Reg. 105, §81.17, T.D. 5512 (1946). As it originally appeared, the rule provided that a

transfer is "intended to take effect in possession or enjoyment at or after his death," and hence the value of the transferred property is includible in the decedent's gross estate, if:

(1) possession or enjoyment of the transferred interest can be obtained only by beneficiaries who *must* survive the decedent . . . (Emphasis supplied.)

The legislative history of the 1949 amendments to section 811(c) indicates clearly that the necessary survivorship rule was to remain undisturbed. The Senate Committee on Finance, in approving the amendments, recognized the rule, and, in its discussion of the bill after it was in its final form the Conference Report states:

. . . The existing rule that a transfer of a property interest is not intended to take effect in possession or enjoyment at or after the decedent's death unless the beneficiaries *must* survive the decedent to obtain possession or enjoyment is not disturbed. (1949-2 Cum. Bull. 295, 298; emphasis supplied.)

The . . . regulations promulgated on March 8, 1951, to implement the 1949 amendments, are to the same effect.*

Undoubtedly then, in determining whether a transferred interest which might revert back to the settlor-decedent was intended to take effect in possession or enjoyment at or after his death, we must inquire whether it was possible, immediately prior thereto for some person who need not have survived him to take that interest. Or, otherwise stated, we must determine whether there was any other contingency, besides the settlor-decedent's death, upon the happening of which his reverter interest would be entirely cut off. If there was, and that contingency was "real," then the transfer was not intended to take effect in possession and enjoyment at or after his death.

At the moment preceding Marshall's death it was possible for beneficiaries to take the one-third interest without surviving him. This could have resulted (1) by a change in the intestate laws of Pennsylvania, mitigating or eliminating the surviving spouse's share; (2) under the present intestate laws if Marshall had divorced his wife or she had divorced him; (3) if Marshall either wilfully neglected or refused to provide for Mrs. Marshall for one year previous to her death, or if he wilfully and maliciously had deserted her for that period. Had any one of those things occurred, the one-third interest which decedent would otherwise have gotten, would have gone to persons (the children, if they survived their mother) who would not have had to survive the decedent.

Nor can these contingencies be disregarded on the ground that they are "unreal." [1] They cannot be regarded as "sham," [2] for, as the Tax Court said:

The indications are that the decedent was not thinking of himself or intending to provide that a part of the trust property was to revert to him and was not to pass to

* Note that the "necessary survivorship" rule is now set out in §2037(a)(1) of the 1954 Code; from 1949 to 1954, it appeared in §811(c)(3), dealing with transfers after October 7, 1949, but not in §811(c)(2), dealing with transfers on or before October 7, 1949. — Ed.

[1] The 1951 Hallock regulations state:

"Where possession or enjoyment of the transferred property can be obtained either by surviving the decedent or through the occurrence of some other event . . . the transfer shall not be considered as intended to take effect in possession or enjoyment at or after the decedent's death *unless, from a consideration of its terms and circumstances as a whole, the other event is deemed to be unreal, in which case such other event shall be disregarded.*" (Emphasis supplied.)

[2] Bittker, in his article "Church and Spiegel: The Legislative Sequel," 59 Yale L.J. 395, 404 (1950), gives the following example of the "unreal" event: ". . . suppose the remainderman were a member of the Communist Party and could take either by becoming President of Yale University or by surviving the settlor. Under the 'Hallock regulation' no doubt the 'other event' would be unreal."

others save upon the condition that he predeceased his wife . . . It seems unlikely that he had it in mind.

The possible contingencies taken together under which beneficiaries could have taken the interest without surviving Marshall cannot be regarded as so remote as to be "unreal."

Thus, there being another event (or events) upon which the beneficiaries could have taken the one-third interest without surviving the decedent, the transfer was not "intended to take effect in possession or enjoyment at or after his (Marshall's) death" and is therefore not includible in Marshall's gross estate.

For the reasons stated the discussion of the Tax Court will be affirmed.

NOTE

1. *The "necessary survivorship" requirement of §2037(a).* Another type of transfer that does not satisfy the "necessary survivorship" rule laid down in the "Hallock regulation" and now set out in §2037(a)(1) of the 1954 Code is this: income to the settlor's wife for her life, remainder to their surviving issue, with a reversion to the settlor or his estate if no issue survive the wife. The "Hallock regulation" did not treat this as a transfer intended to take effect in possession or enjoyment at or after the decedent's death, because the children will take if and only if they are alive when the *life tenant* dies, whether the settlor is still alive or not. Their rights, in other words, are not affected by the settlor's death: if he dies the day after the trust is created, they are no closer to possession or enjoyment than if he were still alive. Thus the transfer is not within the scope of §2037(a)(1), because that clause reaches only those transfers under which "possession or enjoyment of the property can . . . be obtained *only* by surviving the decedent."

During the period from 1940, when the *Hallock* case was decided, to 1946, when the "Hallock regulation" was promulgated, however, a few courts adopted the view that *any* reversionary interest in the settlor required the entire corpus to be included in the gross estate, although the statute said nothing of reversionary interests per se. When this uncritical preoccupation with reversionary interests was at its height, the government seemed to be ready to find a reversionary interest in any trust: if there was a final gift over to a related beneficiary and his estate, it was suggested that the grantor might get the property back by inheritance; if the remainder was left to a charity, it was suggested that the designated charity might not be in existence and that the cy pres doctrine would not be applied, so that the property could revert to the grantor; if the final gift was to the United States (in the hope that no government representative would have the temerity to argue that it might be nonexistent when the remainder was to fall in), the gift might be declined because the estate tax would be larger in amount than the remainder, thus causing a reversion to the grantor; etc. See Looker, Estate Taxation of Living Trusts: The Church and Spiegel Decision, 49 Colum. L. Rev. 437, 447 et seq. (1949). One state intervened (though not until 1949) in aid of the nervous settlor by providing that "if by the terms of the controlling trust instrument the settlor manifested irrevocably his intention to divest himself of all interest" in the property, any interest which otherwise "would be recognized in the settlor of the trust or the estate of the settlor or the heirs at law of the settlor as such . . . shall be deemed to be held upon a resulting trust for the State of Minnesota." Minn. Laws of 1949, c. 201.

Most of the remote reversionary interests that could arise upon failure of issue, dissolution of charities, etc. were not conditioned on survivorship at all, and the fears of cautious conveyancers were calmed when in 1946 the "Hallock regulation" recognized that the only statutory significance of the reversionary interest was that it *might* postpone the beneficiary's possession or enjoyment until the settlor's death. Under this regulation, a reversionary interest was fatal only if it was conditioned on survivorship. Platt, The New Hallock Regulation, 2 Tax L. Rev. 94 (1946). Other reversionary interests were includible in the gross estate under §2033, if not extinguished at death, but only to the extent of their value at the time of death.

When the Supreme Court in the *Church* and *Spiegel* cases stated (supra p. 1216) that a

transfer could not escape the postponed-possession-or-enjoyment clause unless the settlor is left with "no present legal title in the property, no possible reversionary interest in that title, and no right to possess or to enjoy the property then or thereafter," however, it reopened the possibility that any reversionary interest might require inclusion of the entire value of the transferred property. But this possibility was promptly foreclosed by the Technical Changes Act of 1949, which adopted the "necessary survivorship" test of the "Hallock regulation," and this requirement is carried forward by §2037(a)(1).

The transfer described at the beginning of this note, therefore, would not be taxable under §2037. But if the settlor dies before his wife, his estate will possess a possibility of acquiring the property: if when the wife dies no issue survive her, the property will revert to the settlor's estate. The value of this possibility — not the value of the entire corpus — will be included in the settlor's estate under §2033.

2. *Effect of a power of appointment.* When the trust in *Marshall's Estate* were created, Mrs. Marshall was given the power to appoint the corpus; but since she released the power during her husband's lifetime (in 1943), its legal effect was not in issue. Had she not released the power of appointment, the children would have been able to obtain possession and enjoyment of the property if their mother exercised her power of appointment in their favor. If a beneficiary or third party has the power to cut off the decedent's reversionary interest by exercising a general power of appointment, the decedent's death cannot be realistically regarded as a necessary condition to possession or enjoyment. But the Supreme Court held in Goldstone v. United States, 325 U.S. 687 (1945), that at least in some circumstances a reversionary interest was to be counted against the settlor even if it could be destroyed by a beneficiary's power of appointment, and the last sentence of §2037(b) rejects the Court's approach. See Bittker, Church and Spiegel: The Legislative Sequel, 59 Yale L.J. 395, 406-410 (1950). Mrs. Marshall's power was exercisable only by will, and even if not relinquished would probably not have met the standards of the last sentence of §2037(b). But if the grantor's reversionary interest can be destroyed by the exercise of a power of appointment, even if the power does not meet the statutory standard, is the "necessary survivorship" rule of §2037(a)(1) satisfied?

3. *Reversionary power to dispose of property.* The term "reversionary interest" is defined by §2037(b) to include not only a possibility that the property may return to the decedent or his estate, but also a possibility that it may be subject to a "power of disposition by him." What if a trust is created under which the grantor, if he survives the life tenant, will have only a restricted power to affect the remaindermen or other beneficiaries, such as a power to alter the proportion in which they take? See Costin v. Cripe, 235 F.2d 162 (7th Cir. 1956); Klauber's Estate v. Commissioner, 34 T.C. 968 (1960).

In speaking of a possibility that property "may be subject to a power of disposition by him [the decedent]," does §2037(b)(2) contemplate a power exercisable by the decedent alone? In *Klauber's Estate,* supra, the power of disposition was exercisable by a trustee; the court held that it was in affect exercisable by the decedent because he could have removed the trustee and appointed someone amenable to his wishes.

4. *Valuing the reversionary interest in applying the 5 per cent rule.* Even if both questions in the *Marshall's Estate* case had been answered adversely to the taxpayer, it would still have been necessary to determine if the value of the reversionary interest immediately before the death of the decedent exceeded 5 per cent of the value of the property. The ages of Mr. and Mrs. Marshall are not given in the reports, and this information would be essential in determining if his chance of surviving his wife was worth more than 5 per cent of $200,000. (See Regs. §20.2037-1(c)(4), to the effect that the value of the reversionary interest is compared with the value of the transferred property, "including interests therein which are not dependent upon survivorship of the decedent.") For more on the problem of valuing reversionary interests, see page 1228 infra.

5. *Relinquishment of reversionary interest in contemplation of death.* If the grantor of a trust finds that he possesses a reversionary interest that may be worth more than 5 per cent of the corpus when he dies, would a release or assignment of the unwanted interest during his lifetime be a gift in contemplation of death? If so, is the value of the entire corpus includible or only the value of the interest? This problem was considered earlier in connection with a release of a retained life estate to avoid the estate tax. See United States v. Allen, supra page 1198.

6. *Reference.* Covey, The Klauber Case and Sections 2036(a)(1), 2037 and 2038 of the 1954 Code, 5 Tax Couns. Q. 129 (1961).

SMITH v. SHAUGHNESSY
318 U.S. 176 (1943)

MR. JUSTICE BLACK delivered the opinion of the Court.

The question here is the extent of the petitioner's liability for a tax under [§2511(a)], which imposes a tax upon every transfer of property by gift, "whether the transfer is in trust or otherwise, whether the gift is direct or indirect, and whether the property is real or personal, tangible or intangible; . . ."

The petitioner, age 72, made an irrevocable transfer in trust of 3,000 shares of stock worth $571,000. The trust income was payable to his wife, age 44, for life; upon her death, the stock was to be returned to the petitioner, if he was living; if he was not living, it was to go to such persons as his wife might designate by will, or in default of a will by her, to her intestate successors under applicable New York law. The petitioner, under protest, paid a gift tax of $71,674.22, assessed on the total value of the trust principal, and brought suit for refund in the district court. Holding that the petitioner had, within the meaning of the Act, executed a completed gift of a life estate to his wife, the court sustained the Commissioner's assessment on $322,423, the determined value of her life interest; but the remainder was held not to be completely transferred and hence not subject to the gift tax. 40 F. Supp. 10. The Government appealed and the Circuit Court of Appeals reversed, ordering dismissal of the petitioner's complaint on the authority of its previous decision in Herzog v. Commissioner, 116 F.2d 591. We granted certiorari because of alleged conflict with our decisions in Helvering v. Hallock [supra p. 1213], and Sanford v. Commissioner [supra p. 1150]. In these decisions, and in Burnet v. Guggenheim [supra p. 1007], we have considered the problems raised here in some detail, and it will therefore be unnecessary to make any elaborate re-survey of the law.

Three interests are involved here: the life estate, the remainder, and the reversion. The taxpayer concedes that the life estate is subject to the gift tax. The Government concedes that the right of reversion to the donor in case he outlives his wife is an interest having value which can be calculated by an actuarial device, and that it is immune from the gift tax. The controversy, then, reduces itself to the question of the taxability of the remainder.

The taxpayer's principal argument here is that under our decision in the *Hallock* case, the value of the remainder will be included in the grantor's gross estate for estate tax purposes; and that in the *Sanford* case we intimated a general policy against allowing the same property to be taxed both as an estate and as a gift.

This view, we think, misunderstands our position in the *Sanford* case. As we said there, the gift and estate tax laws are closely related and the gift tax serves to supplement the estate tax.[1] We said that the taxes are not "always mutually exclusive," and called attention to [§2012], which charts the course for granting credits on estate taxes by reason of previous payment of gift taxes on the same property. The scope of that provision we need not now determine. It is sufficient to note here that Congress plainly pointed out that "some" of the "total gifts subject to gift taxes . . . may be included for estate tax purposes and some

---

1 The gift tax was passed not only to prevent estate tax avoidance, but also to prevent income tax avoidance through reducing yearly income and thereby escaping the effect of progressive surtax rates. House Report No. 708, 72d Cong., 1st Sess., p. 28; Brandeis, J., dissenting in Untermyer v. Anderson, 276 U.S. 440, 450; Stone, J., dissenting in Heiner v. Donnan, 285 U.S. 312, 333.

not." House Report No. 708, 72d Cong., 1st Sess., p. 45. Under the statute the gift tax amounts in some instances to a security, a form of down-payment on the estate tax which secures the eventual payment of the latter; it is in no sense double taxation as the taxpayer suggests.

We conclude that under the present statute, Congress has provided as its plan for integrating the estate and gift taxes this system of secured payment on gifts which will later be subject to the estate tax.[2]

Unencumbered by any notion of policy against subjecting this transaction to both estate and gift taxes, we turn to the basic question of whether there was a gift of the remainder. The government argues that for gift tax purposes the taxpayer has abandoned control of the remainder and that it is therefore taxable, while the taxpayer contends that no realistic value can be placed on the contingent remainder and that it therefore should not be classed as a gift.

We cannot accept any suggestion that the complexity of a property interest created by a trust can serve to defeat a tax. For many years Congress has sought vigorously to close tax loopholes against ingenious trust instruments. Even though these concepts of property and value may be slippery and elusive they can not escape taxation so long as they are used in the world of business. The language of the gift tax statute, "property . . . real or personal, tangible or intangible," is broad enough to include property, however conceptual or contingent. And lest there be any doubt as to the amplitude of their purpose, the Senate and House Committees, reporting the bill, spelled out their meaning as follows:

> The terms "property," "transfer," "gift," and "indirectly" [in §2511(a)], are used in the broadest and most comprehensive sense; the term "property" reaching every species of right or interest protected by law and having an exchangeable value.

The essence of a gift by trust is the abandonment of control over the property put in trust. The separate interests transferred are not gifts to the extent that power remains to revoke the trust or recapture the property represented by any of them, Burnet v. Guggenheim, supra, or to modify the terms of the arrangement so as to make other disposition of the property, Sanford v. Commissioner, supra. In the *Sanford* case the grantor could, by modification of the trust, extinguish the donee's interest at any instant he chose. In cases such as this, where the grantor has neither the form nor substance of control and never will have unless he outlives his wife, we must conclude that he has lost all "economic control" and that the gift is complete except for the value of his reversionary interest.

The judgment of the Circuit Court of Appeals is affirmed with leave to the petitioner to apply for modification of its mandate in order that the value of the petitioner's reversionary interest may be determined and excluded.

It is so ordered.

MR. JUSTICE ROBERTS.

I dissent. I am of opinion that, except for the life estate in the wife, the gift qua the donor was incomplete and not within the sweep of [§2511(a)]. A contrary conclusion might well be reached were it not for Helvering v. Hallock, 309 U.S. 106. But the decision in Burnet v. Guggenheim, 288 U.S. 280, and Sanford v. Commissioner, 308 U.S. 39, to which the court adheres, requIre a reversal in view of the ruling in the *Hallock* case.

---

[2] It has been suggested that the congressional plan relating the estate and gift taxes may still be incomplete. See e.g., Griswold, "A Plan for the Coordination of the Income, Estate, and Gift Tax Provisions, etc.," 56 Harv. L. Rev. 337; Magill, "The Federal Gift Tax," 40 Col. L. Rev. 773, 792; Kauper, "The Revenue Act of 1942: Estate and Gift Tax Amendments," 41 Mich. L. Rev. 369, 388; and see Commissioner v. Prouty, 115 F.2d 331, 337; Higgins v. Commissioner, 129 F.2d 237, 239.

The first of the two cases ruled that a transfer, in trust whereby the grantor reserved a power of revocation, was not subject to a gift tax, but became so upon the renunciation of the power. The second held that where the grantor reserved a power to change the beneficiaries, but none to revoke or to make himself a beneficiary, the transfer was incomplete and not subject to gift tax. At the same term, in Porter v. Commissioner, 288 U.S. 436, the court held that where a decedent had given property inter vivos in trust, reserving a power to change the beneficiaries but no power to revoke or revest the property in himself, the transfer was incomplete until the termination of the reserved power by the donor's death and hence the corpus was subject to the estate tax.

When these cases were decided, the law, as announced by this court, was that where, in a complete and final transfer inter vivos, a grantor provided that, in a specified contingency, the corpus should pass to him, if living, but, if he should be dead, then to others, the gift was complete when made, he retained nothing which passed from him at his death, prior to the happening of the contingency, and that no part of the property given was includible in his gross estate for estate tax. McCormick v. Burnet, 283 U.S. 784; Helvering v. St. Louis Union Trust Co., 296 U.S. 39; Becker v. St. Louis Union Trust Co., 296 U.S. 48. So long as this was the law the transfer might properly be the subject of a gift tax for the gift was, as respects the donor, complete when made.

In 1940 these decisions were overruled [by *Hallock*, supra p. 1213] and it was held that such a transfer was so incomplete when made, and the grantor retained such an interest, that the cessation of that interest at death furnished the occasion for imposing an estate tax. Thus the situation here presented was placed in the same category as those where the grantor had reserved a power to revoke or a power to change beneficiaries. By analogy to the *Guggenheim* and *Sanford* cases, I suppose the gift would have become complete if the donor had, in his life, relinquished or conveyed the contingent estate reserved to him.

In the light of this history, the *Sanford* case requires a holding that the gifts in remainder, after the life estate, create no gift tax liability. The reasoning of that decision, the authorities, and the legislative history relied upon, are all at war with the result in this case. There is no need to quote what was there said. A reading of the decision will demonstrate that, if the principles there announced are here observed, the gifts in question are incomplete and cannot be the subject of the gift tax.

It will not square with logic to say that where the donor reserves the right to change beneficiaries, and so delays completion of the gift until his death or prior relinquishment of the right, the gift is incomplete, but where he reserves a contingent interest to himself the reverse is true,— particularly so, if the criterion of estate tax liability is important to the decision of the question, as the *Sanford* case affirms.

The question is not whether a gift which includes vested and contingent future interests in others than the donor is taxable as an entirety when made, but whether a reservation of such an interest in the donor negatives a completion of the gift until such time as that interest is relinquished.

All that is said in the *Sanford* case about the difficulties of administration and probable inequities of a contrary decision there, applies here with greater force. Indeed a system of taxation which requires valuation of the donor's retained interest, in the light of the contingencies involved, and calculation of the value of the subsequent remainders by resort to higher mathematics beyond the ken of the taxpayer, exhibits the artificiality of the Government's application of the Act. This is well illustrated in the companion cases of *Robinette* and *Paumgarten.*

Such results argue strongly against the construction which the court adopts.

ROBINETTE v. HELVERING

318 U.S. 184 (1943)

MR. JUSTICE BLACK delivered the opinion of the Court.

This is another case under [§2511(a)], which, while presenting certain variants on the questions decided in Smith v. Shaughnessy, is in other respects analogous to and controlled by that case.

In 1936, the petitioner, Elise Paumgarten (nee Robinson), was thirty years of age and was contemplating marriage; her mother, Meta Biddle Robinette, was 55 years of age and was married to the stepfather of Miss Robinson. The three, daughter, mother and stepfather, had a conference with the family attorney, with a view of keeping the daughter's fortune within the family. An agreement was made that the daughter should place her property in trust, receiving a life estate in the income for herself, and creating a second life estate in the income for her mother and stepfather if she should predecease them. The remainder was to go to her issue upon their reaching the age of 21, with the further arrangement for the distribution of the property by the will of the last surviving life tenant if no issue existed. Her mother created a similar trust, reserving a life estate to herself and her husband and a second or contingent life estate to her daughter. She also assigned the remainder to the daughter's issue. The stepfather made a similar arrangement by will. The mother placed $193,000 worth of property in the trust she created, and the daughter did likewise with $680,000 worth of property.

The parties agree that the secondary life estates in the income are taxable gifts, and this tax has been paid. The issue is whether there has also been a taxable gift of the remainders of the two trusts. The Commissioner determined that the remainders were taxable, the Board of Tax Appeals reversed the Commissioner, and the Circuit Court of Appeals reversed the Board of Tax Appeals. 129 F.2d 832.

The petitioners argue that the grantors have not relinquished economic control and that this transaction should not be subject both to the estate and to the gift tax. What we have said in the *Smith* case determines these questions adversely to the petitioners. However, the petitioners emphasize certain other special considerations.

First. Petitioners argue that since there were no donees in existence on the date of the creation of the trust who could accept the remainders, the transfers cannot be completed gifts. The gift tax law itself has no such qualifications. It imposes a tax "upon the transfer . . . of property by gift." And Treasury Regulations [§25.2511-2(a)] provide that "The tax is a primary and personal liability of the donor, is an excise upon his act of making the transfer, is measured by the value of the property passing from the donor, and attaches regardless of the fact that the identity of the donee may not then be known or ascertainable." We are asked to strike down this regulation as being invalid because inconsistent with the statute. We do not think it is. As pointed out in the *Smith* case, the effort of Congress was to reach every kind and type of transfer by gift. The statute "is aimed at transfers of the title that have the quality of a gift." Burnet v. Guggenheim, 288 U.S. 280, 286. The instruments created by these grantors purported on their face wholly to divest the grantors of all dominion over the property; it could not be returned to them except because of contingencies beyond their control. Gifts of future interests are taxable under [§2503(b)], and they

do not lose this quality merely because of the indefiniteness of the eventual recipient. The petitioners purported to give the property to someone whose identity coud be later ascertained and this was enough.

Second. It is argued that the transfers were not gifts but were supported by "full consideration in money or money's worth." This contention rests on the assumption that an agreement between the parties to execute these trusts was sufficient consideration to support the transfers. We need not consider or attempt to decide what were the rights of these parties as among themselves. Petitioners think that their transaction comes within the permissive scope of Regulations [§25.2512-8] which provides that "a sale, exchange, or other transfer of property made in the ordinary course of business (a transaction which is bona fide, at arm's length, and free from any donative intent) will be considered as made for an adequate and full consideration in money or money's worth." The basic premise of petitioner's argument is that the moving impulse for the trust transaction was a desire to pass the family fortune on to others. It is impossible to conceive of this as even approaching a transaction "in the ordinary course of business."

Third. The last argument is that "in any event, in computing the value of the remainders herein, allowance should be made for the value of the grantor's reversionary interest." Here, unlike the *Smith* case, the government does not concede that the reversionary interest of the petitioner should be deducted from the total value. In the *Smith* case, the grantor had a reversionary interest which depended only upon his surviving his wife, and the Government conceded that the value was therefore capable of ascertainment by recognized actuarial methods. In this case, however, the reversionary interest of the grantor depends not alone upon the possibility of survivorship but also upon the death of the daughter without issue who should reach the age of 21 years. The petitioner does not refer us to any recognized method by which it would be possible to determine the value of such a contingent reversionary remainder. It may be true, as the petitioners argue, that trust instruments such as these before us frequently create "a complex aggregate of rights, privileges, powers and immunities and that in certain instances all these rights, privileges, powers and immunities are not transferred or released simultaneously." But before one who gives his property away by this method is entitled to deduction from his gift tax on the basis that he had retained some of these complex strands it is necessary that he at least establish the possibility of approximating what value he holds. Factors to be considered in fixing the value of this contingent reservation as of the date of the gift would have included consideration of whether or not the daughter would marry; whether she would have children; whether they would reach the age of 21; *etc.* Actuarial science may have made great strides in appraising the value of that which seems to be unappraisable, but we have no reason to believe from this record that even the actuarial art could do more than guess at the value here in question. Humes v. United States, 276 U.S. 487, 494.

The judgment of the Circuit Court of Appeals is affirmed.

MR. JUSTICE ROBERTS dissents for the reasons set forth in his opinion in Smith v. Shaughnessy.

NOTE

1. *Value of reversionary interest in applying 5 per cent rule of §2037.* Section 2037(b) of the estate tax law states that in applying the 5 per cent test, the value of a reversionary interest shall be determined "by usual methods of valuation, including the use of tables of mortality and actuarial principles." The Conference Committee's report on the

Technical Changes Act of 1949, in recommending adoption of the 5 per cent rule, stated:

> The value [of a reversionary interest] shall be ascertained as though the decedent were, immediately before his death, making a gift of the property and retaining the reversionary interest. The rule of Robinette v. Helvering (318 U.S. 184), under which a reversionary interest not having an ascertainable value under recognized valuation principles is considered to have a value of zero, is to apply. [H.R. Rept. No. 1412, 81st Cong., 1st Sess., 1949-2 C.B. 295, 297.]

Why should valuation of reversionary interests, under the 5 per cent rule, be governed by the same principles that are applied in valuing such interests for the gift tax?

The Senate Report on the 1954 Code states:

> The decedent's reversionary interest is to be valued by recognized valuation principles and without regard to the fact of the decedent's death. Where it is apparent from the facts that property could have reverted to the decedent under contingencies that were not remote, the reversionary interest is not to be necessarily regarded as having no value merely because the value thereof cannot be measured precisely.* [S. Rept. No. 1622, 83d Cong., 2d Sess. 469.]

If the reversionary interest's value cannot be determined by recognized principles of valuation, is it to be treated as having no value, as the 1949 Conference Report states, — or does the 1954 Senate Report mean that it will be treated as worth more than 5 per cent because the taxpayer will be unable to prove that it is worth less? In Estate of Thacher v. Commissioner, 20 T.C. 474 (1953), property would revert to the decedent if his wife was divorced or legally separated from him. Because there was no evidence that the value of the reversionary interest could not be measured, the court held that it had to assume that the value of the interest exceeded 5 per cent of the value of the property. Can this conclusion be reconciled with the 1949 Conference Report? The case was decided in 1953. If it had come up after the 1954 Senate Report, would the reversionary interest be fatal even if there was evidence that its value could not be calculated by recognized valuation methods? See also Cardeza's Estate v. United States, 261 F.2d 423 (3d Cir. 1958) (reversionary interest in decedent contingent on son's death without issue; held, in view of financial incentive to son's having issue, no value can be reliably ascribed to decedent's reversionary interest and, under 1939 Code, it must be treated as having value of zero).

2. *Possibility of invasion of corpus for decedent's benefit.* What is the relation between the 5 per cent rule and cases like Blunt v. Kelly, supra page 1164? Under these cases, part or all of the corpus of a trust was included in the grantor's estate because he had the right to compel the trustee to make distributions to him on the occurrence of specified events. If the possibility is such that the 5 per cent rule would not be satisfied, are these cases (which arose under the old postponed-possession-or-enjoyment clause) still valid?

In Holtz's Estate v. Commissioner, supra page 1013, the decedent had reserved the right to receive the income from the transferred property, as well as such amounts of the principal as the trustee "may from time to time think desirable for the welfare, comfort and support of Settlor, or for his hospitalization or other emergency needs." If he had not retained the right to the income, would the corpus be includible in his gross estate under §2037?

3. *Gift tax when trustee is to pay settlor's income taxes.* Harrison v. Commissioner, 17 T.C. 1350 (1952), involved the valuation, for gift tax purposes, of a trust under which the trustee was required to pay the settlor's federal and state income taxes. The Com-

* In Summary of the New Provisions of the Internal Revenue Code of 1954 (1955), prepared by the Joint Committee on Internal Revenue Taxation, the 5 per cent rule is described as follows: "The 1954 Code provides that property previously transferred by a decedent is to be includible in his estate only if he still has (either expressly or by operation of law) immediately before his death a reversionary interest in the property exceeding 5 per cent of its value. The reversionary interest will be valued by actuarial methods so that a mere expectancy will have no value, whether or not it could be considered a reversionary interest." (P. 113.) — Ed.

missioner contended that in computing the amount subject to gift tax no allowance could be made for the settlor's reservation of the right to have her income taxes paid by the trustee because the value of that right was not ascertainable with the accuracy required by the *Robinette* case. The court held:

> It is, of course, impossible to foretell with mathematical accuracy the amount of the future Federal and state income taxes which have to be paid under the terms of the trust agreement within the lifetime of petitioner. However, of a certainty, we know that some tax payments will be required. Since the adoption of the Sixteenth Amendment to the Constitution, Federal income taxes have become a permanent and growing part of our economy, and there is no likelihood that such taxes will not continue to be imposed throughout the life expectancy of petitioner. Even though difficult to ascertain, an estimate of petitioner's present right to have her future income tax paid should be made. [17 T.C. at 1354-1355.]

An estimate was more feasible in the *Harrison* case than it would be in many circumstances, since the taxpayer had transferred all of her income-producing property into the trust and had retained only the right to receive $12,000 per year therefrom (plus an amount to discharge her income taxes); the value of the right to have her income taxes paid was apparently estimated by the court on the assumption that federal and state taxes would continue for the settlor's life expectancy to be very nearly what they were when the trust was created. (For another aspect of this case, see page 1012 supra.)

FEDERAL ESTATE AND GIFT TAXES: A PROPOSAL FOR INTEGRATION AND FOR CORRELATION WITH THE INCOME TAX

Joint Study of Advisory Committee to the Treasury Department and by Office of Tax Legislative Counsel 22-24 (1947)

2. *Dispositions Reserving a Reversionary Interest in the Transferor*

Under this heading the following provisions are recommended:

(a) A transfer shall be deemed incomplete if the property or the income therefrom must revert to the transferor or his estate after the expiration of any period of time;

(b) A transfer shall be deemed incomplete if the property or the income therefrom may so revert to the transferor or his estate and no beneficiary can obtain possession or enjoyment of the property during the transferor's lifetime.

These suggestions for change require a brief explanation of existing law.

If a transferor at the present time [1947], in making an inter vivos disposition of property, provides that the property is to return to him or his estate after a specified period of time, a gift tax is imposed upon the value of the interests granted to others. If the property does not revert to him prior to his death, an estate tax is imposed upon the value of the reversion at the date of death. If there is a similar reversionary interest only in the income, the actuarial value of such lesser interest is taxable at death. The draft accompanying this report would withhold the imposition of any transfer tax until death unless the reversionary interest were released before death. There are two reasons which suggest the appropriateness of the recommendations. First, a transfer tax should strive as much as possible, for the sake of simplicity in application and convenience of administration, to apply at one particular time to a disposition as a whole. One might say that such single application is of the very essence of an integrated transfer tax. If tax is imposed at several stages, difficulties are bound to arise, especially with regard to the valuation of interests preceding the reversion. Secondly, the recommendation follows very naturally from the income tax treatment

proposed with respect to the same type of transfer. Since it was felt that income tax should be imposed upon the transferor, a suggestion that such a transfer be treated as a completed gift was rejected. The considerations for imposition of income tax upon the transferor in this connection are noted more fully below in describing the income tax recommendations.

A problem of much greater importance under the existing estate and gift taxes is presented by a reversionary interest in the grantor or his estate which is contingent in character. Such an interest arises where the property may or may not return to the grantor, depending upon whether or not he survives the income beneficiaries. The gift tax consequences where such a reversionary interest is present are generally clear. A gift tax is payable upon the value of the entire property less the value of the reversionary interest (Smith v. Shaughnessy [supra p. 1224]), or upon the value of the entire property if the reversionary interest cannot be valued according to recognized actuarial methods of computation (Robinette v. Helvering [supra p. 1227]). If the property is thereafter included in the gross estate at the transferor's death, a credit is allowed for the gift tax paid.

The situation under the estate tax was obscure for a long time. The recent regulations have, however, cleared the air of much of the confusion surrounding transfers with reserved reversionary interests. See Reg. 105, section 81.17 [supra p. 1220]. Under the regulations, if a transferor provides that the property is to return to him if he is living at the death of the income beneficiaries, the value of the property, less the value of any outstanding life estates in others, is includible in the gross estate. The typical situation is one in which the transferor provides for a life estate in his wife, a remainder to their children if he predeceases his wife, and a reversion to him if he survives her. Inasmuch as the ultimate receipt of the remainder is dependent upon the beneficiaries' survival of the transferor, it is taxable under section 811(c) of the 1939 Code* as a transfer intended to take effect in possession or enjoyment at or after the transferor's death. Helvering v. Hallock, 309 U.S. 106 (1940). On the other hand, where the passing of a remainder interest is not dependent upon the transferor's death, such interest is not subjected by the regulations to an estate tax despite the transferor's reservation of a reversion. Such a case may be illustrated by a transfer in trust providing for a life estate in the transferor's wife, a remainder to their surviving issue, and a reversion to the transferor or his estate in the absence of such issue.

The foregoing principles have provided the basis for the recommendation made with respect to contingent reversionary interests. Under the proposed provision, where the transferor reserves such an interest, the basic question is whether any beneficiary can obtain possession or enjoyment of the property during the transferor's lifetime. If the answer is in the affirmative, the entire property is subjected to transfer tax at the time of transfer. If the answer is in the negative, the transfer tax is postponed until death. In neither case is allowance made for the value of the reversion or of any outstanding life estates. In this manner there is but one taxable event and difficult problems of valuing "slippery and elusive" interests are avoided. Cf. Smith v. Shaughnessy, 318 U.S. 176, 180 (1943). Although such problems could be avoided by treating all transfers with contingent reversionary interests as completed gifts, this approach was rejected for two reasons. First, since transfers of the *Hallock* variety suspend the ultimate possession of the property until the grantor's death, they are essentially death transfers of the property. Secondly, the adoption of such a rule would create an avenue of income tax avoidance through the use of contingent reverters which

* I.e., before the 5 per cent rule was enacted by the Technical Changes Act of 1949. — Ed.

would almost certainly vest in the grantor prior to death. On the other hand, dispositions under which the property can be obtained while the transferor is living do not constitute dispositions at death and are accordingly treated as completed transfers. It is of course possible, as in the case of a *Hallock* transfer, to utilize such a disposition as a means of escaping the income tax on the transferred property and at the same time assuring the return of the property. The fact that a second transfer tax on the entire property would be payable when the transferor redisposes of the property which has come back to him, however, will tend to discourage such devices.

NOTE

How does this proposal differ from the treatment provided by the 1954 Code? Which is preferable, in your opinion?

SECTION F. SURVIVORSHIP ANNUITIES: §2039

1. *Purchased Commercial Annuities*

Section 2039, governing the taxability of survivorship annuities, was added to the Internal Revenue Code in 1954. Before 1954, the value of the rights of a beneficiary under a survivorship annuity was included in the gross estate of the purchaser of the annuity contract only if the transaction could be fitted into some other provision of the estate tax law. To see the 1954 statute in perspective, it is necessary to sketch in the background.

Suppose A purchases a commercial annuity contract under which he will receive $5000 a year for his life and his wife, if she survives him, will receive the same (or lesser) amount for her life. This is a "self and survivor" contract. Disregarding the insurance company's expenses and profit, A's purchase of the contract might be compared to a transfer of property in trust, under which A is to receive (a) the income for life, plus (b) part of the corpus each year, if necessary to bring his return up to $5000 per year. Since a transfer in trust with reservation of the income for life is taxable under §2036 (unless the transfer was made on or before March 3, 1931), A's annuity contract would also seem to be includible under §2036. The parallel is not perfect, to be sure, since A is entitled to receive $5000 per year under the contract, but no more; if instead of buying the contract he had transferred an equal amount in trust with a reservation of the income, his return in any one year might exceed $5000. But the cost of A's annuity is based on the assumption that A for his life, and then his wife for hers, will not only get the income produced by the funds paid for the annuity, but also returns to capital. At one time it was argued that the purchaser of such an annuity contract had not "retained" possession or enjoyment of any property or the income therefrom, as required by §2036, because the consideration he paid for the contract was entirely at the disposal of the insurance company. The courts finally adopted the view, however, that the value of the wife's rights under such a contract, measured at the time of the purchaser's death, was includible under what is now §2036. Commissioner v. Clise, 122 F.2d 998 (9th Cir. 1941), cert. denied, 315 U.S. 821 (1942); Forster v. Sauber, 249 F.2d 379 (7th Cir. 1957); see also Welliver's Estate v. Commissioner, 8 T.C. 165, 172 (1947) (beneficiary's rights valued at the cost of obtaining a contract for her at time of decedent's death, even if greater than the part of the cost of the original contract attributable to her rights). Of course, if the wife predeceases the husband, the insurance

company's obligation to make payments would terminate at the husband's death and there would be no value to be included in his gross estate.

Another common annuity contract provides for payments to both the purchaser and his wife while they both live, with payments continuing to the survivor (a "joint and survivor" annuity). Suppose A is to get $2500 and his wife a like amount while they both live, and the survivor is to receive $5000 for life. If A predeceases his wife, can the value of her rights at the time of his death be taxed to his estate under §2036? It is of course possible that A's $2500 per year during his wife's life was substantially less than the income that would have been produced if the purchase price of the annuity had been transferred in trust. Does this destroy the analogy suggested earlier? Even if it does, recall that in Marks v. Higgins, supra page 1192, a transfer under which the grantor reserved a "contingent" life estate was held to be within §2036. Does not A, under the joint and survivor annuity, have at least the equivalent of a contingent life estate, namely, his right to receive $5000 per year should he survive his wife? Such annuities were held to be taxable under what is now §2036. Mearkle's Estate v. Commissioner, 129 F.2d 386 (3d Cir. 1942).

Section 2039 of the 1954 Code now takes over from §2036 the responsibility for such annuities as these. Accepting the analogy of transfers with reserved life estates, §2039 applies (like §2036) only to transactions after March 3, 1931, and the last clause of §2039(a) is adopted verbatim from §2036(a).* The House version of §2039 required that "an annuity or similar payment" be payable to the decedent; the Senate changed this phrase to "an annuity or other payment" to make it clear that §2039 applied if the decedent could get a lump-sum payment in lieu of an annuity. (S. Rept., p. 470). Note that §2039(a) is applicable if "an annuity or other payment *was payable* to the decedent, or the decedent *possessed the right to receive such annuity or payment.*" (Emphasis supplied.) Is there a difference between an annuity that was "payable" to the decedent and one that he "possessed the right to receive"? Is §2039 applicable if the decedent's *wife* was to receive the annuity for her life and he was to receive payments only if he survived her? Suppose A, instead of buying a "self and survivor" annuity, buys two contracts: an annuity for himself; and one for his wife under which payments are to be made only if she survives him. Is §2039 applicable?

The Senate Report states (p. 472) that the provisions of §2039 "shall not prevent the application of any other provision of law relating to the estate tax." Consider these possibilities:

1. Could an annuity contract purchased on or before March 3, 1931, be reached by §2037? Under the "self and survivor" contract, the wife gets nothing unless she survives A. Does this meet the requirement of §2037(a)(1)? If A lives long enough his wife will get nothing. Does this mean that he has a "reversionary interest" within the meaning of §2037(a)(2)? In Pruyn's Estate v. Commissioner, 184 F.2d 971 (2d Cir. 1950), it was held that the purchaser of a "self and survivor" contract does not have a reversionary interest as that term is used in what is now §2037(a). In Commissioner v. Wilder's Estate, 118 F.2d 281 (5th Cir. 1941), however, the court held that the wife's rights under a "self and survivor" contract are intended to take effect in possession or enjoyment on her husband's death, which may mean that the court thought the purchaser had a reversionary interest. If A buys a "joint and survivor" contract under which he and his wife will each get $2500 while they both live, and the survivor will then

* In taking over this language from §2036(a), the draftsman seems to have overlooked the fact that it came into the statute in 1932 rather than in 1931. Supra page 1179. Section 2036(b) recognizes the difference between the Joint Resolution of March 3, 1931, and the amendment of June 6, 1932, but §2039, although it uses March 3, 1931, as a dividing date, does not.

get $2500 for life, is §2037(a)(1) satisfied? What if the survivor's annuity is to increase to $5000 on A's death, and A dies first?

2. If §2039 is inapplicable, either because the decedent had no right to receive payments himself or because the contract was purchased on or before March 3, 1931, would §2038 be applicable if the decedent reserved a power to alter or amend the beneficiary's rights?

3. If A buys an annuity contract for his wife, and dies within three years, could the purchase be treated as a gift in contemplation of death under §2035?

4. If the decedent purchased an annuity for himself alone, with no provision for payments to a survivor, §2039 is inapplicable, and there is no value at the date of death to be included under any other provision. But if such a contract provides for a refund to the purchaser's estate if he dies before receiving a specified number of payments (e.g., as in the *Egtvedt* case, supra p. 150), §2033 would reach the refund. If the refund is payable to a named beneficiary rather than to the purchaser's estate, apparently §2039 would be applicable.

5. If the purchaser of an annuity contract had, until his death, the power to surrender the contract for cash, would the amount he could obtain just before his death by a surrender of the contract be taxable under §2033?

6. A buys a contract providing an annuity for his wife, who is younger than he. His only right under the contract is that he or his estate will receive a refund if his wife should die before her receipts under the contract equal the price he paid for it. A dies before his wife has received back the cost of the contract. Is anything includible in A's estate? Note that if A's wife lives out her life expectancy, there will be no refund. Would the answer depend upon the estate of Mrs. A's health when A dies? See Hofford v. Commissioner, 4 T.C. 542, 556-557 (1945).

The income tax status of annuities was dealt with supra pages 153-154. A portion of the payments under an annuity contract may be excluded from gross income under §72(b) as a return of capital, but the balance constitutes taxable income by virtue of §72(a). In the case of a survivorship annuity, the exclusion determined under §72(b) is available throughout the contract period, i.e., the primary annuitant is entitled to exclude part of each payment until death and the survivor annuitant excludes a similar portion during his or her life. But §2039 requires the value of the survivor's rights under the contract to be included in the purchaser's gross estate, and the estate tax value may exceed the aggregate amount which the survivor would be entitled to treat as a return of capital under §72(b). For this reason, §691(d) permits the survivor, in the case of a joint and survivor annuity, to deduct an appropriate portion of the estate tax as the payments under the contract come in. The complex relation between the income tax and the estate tax is illustrated by an example in Forster and Frost, Changes in Taxation of Life Insurance, Endowment, and Annuity Contracts, 1955 So. Calif. Tax Inst. 557, 584-585. Does §691(d) offer any relief in the case of "self and survivor" annuities?

2. *Employee Annuities*

As the foregoing material indicates, the taxable status of typical joint and survivor annuities was moderately clear even before the enactment of §2039 in 1954, and the minor unsettled issues are still in doubt. In point of fact, however, the primary function of the new section was to clear up the status of survivorship annuities purchased by employers for their employees. The Senate Report states (p. 123):

> Under present [pre-1954] law the value at the decedent's death of a joint and survivor annuity purchased by him is includible in his gross estate. It is not clear under existing

law whether an annuity of that type purchased by the decedent's employer, or an annuity to which both the decedent and his employer made contributions is includible in the decedent's gross estate.*

BAHEN'S ESTATE v. UNITED STATES

305 F.2d 827 (Ct. Cl. 1962)

DAVIS, Judge.

The estate of a former high-ranking officer of The Chesapeake and Ohio Railway Company claims that sums paid by the C. & O. to his widow on his death in 1955, under benefit plans unilaterally adopted by the railroad in 1952 and 1953, were improperly included in his gross estate for tax purposes. The issue is one of law under the Internal Revenue Code of 1954; the parties have agreed upon a stipulation of facts which we have accepted.

The decedent, J. William Bahen, was born in 1905 and died in 1955. He married the plaintiff, executrix of the estate, in 1930; they had no children. For almost 37½ years Mr. Bahen worked continuously for the C. & O.; at his death he was the fulltime Assistant to the President. He had not retired nor was he eligible for retirement. . . .

After Mr. Bahen's death, the C. & O. made payments to his widow under two plans which it had earlier established for its employees. The first was the Death Benefit Plan, adopted in January 1952, which provided (see finding 9) that, if a covered employee with more than 10 years' service died while in the company's employ and before becoming eligible for retirement, the C. & O. would pay, "in recognition of the services rendered by him," a sum equal to three months' salary to his widow or (if she died prior to payment) to the guardian of any of his minor children.

The more significant arrangement was the Deferred Compensation Plan adopted by the company in February 1953 for forty of its officers and executives. See finding 6. For a designated officer who was under 60 at that time, like Mr. Bahen, the C. & O. would pay a stated maximum sum ($100,000 in Mr. Bahen's case), at his death either before or after retirement, to his widow and to those of his surviving children under 21 the officer might specify (and in the propor-

* For a summary of the pre-1954 law, see Bittker, Estate and Gift Taxation Under the 1954 Code: The Principal Changes, 4 U. of Denver Tax Inst. 140 (1954), also in 29 Tul. L. Rev. 453 (1955):

"A . . . difficult problem under the pre-1954 law was created by employee annuities paid or financed by employers. If an employee, in an effort to provide financial security for his wife after his death, bargained with his employer for an increased salary, and used the increased wages to purchase a joint and survivor annuity contract, the survivor's rights under the contract were treated like similar rights under any other purchased annuity contract. But if instead of increasing wages, the employer agreed to provide an annuity upon retirement, with payments to be made to the wife upon the employee's death, the pre-1954 law was far less clear. Since such retirement annuities were customarily payable only if the employee had not died, quit, or been discharged for cause before the retirement date set in the employer's plan, there was some doubt as to whether the employee had any 'property' to transfer, and it was almost as doubtful under the cases whether he made a 'transfer' by designating his wife as the survivor annuitant under the contract or plan. The Internal Revenue Service attacked primarily contracts under which the employee could choose between (a) an annuity for his life alone and (b) an annuity at a reduced rate for his life with payments to continue to his wife after his death. If the employee elected to take the reduced annuity, the Service asserted that he had transferred property within the meaning of Section 811(c) of the 1939 Code. The courts in general rejected this position. Commissioner v. Twogood's Estate, 194 F.2d 627 (2d Cir. 1952); Higgs' Estate v. Commissioner 184 F.2d 427 (3d Cir. 1950); Note, 64 Harv. L. Rev. 674 (1951). The Internal Revenue Service, however, persisted in its view that the rights of the survivor were includible in the employee's gross estate, at least where he made an election of the kind just described. Rev. Rul. 158, 1953-2 C.B. 259; Rev. Rul. 260, ibid. 262." — ED.

tions he designated), in 60 equal monthly installments. These payments were to be made only if a wife or minor child survived the officer and would continue only so long as there was a surviving wife or child under 21. However, if prior to retirement the officer became totally incapacitated, mentally or physically, for further performance of duty, the payments would be made to him in 60 equal monthly installments so long as he survived, any unpaid installment going to his widow or minor children. The president of the company was to notify each officer covered by the Plan of the benefits payable to him and was also "to represent that the Plan is irrevocable, not subject to later withdrawal by this Board [of Directors], and represents a firm commitment on the part of the Company to extend benefits in accordance with the terms and conditions herein set forth" (finding 6). Mr. Bahen was immediately notified of this Deferred Compensation Plan and its irrevocability.

Both of these plans were established by the voluntary unilateral action of the C. & O. The costs were not deducted from other compensation received by Mr. Bahen. Both plans were unfunded and the company did not purchase insurance policies or annuity contracts in connection with them. . . .

Mrs. Bahen received $7,437.50 (three months' salary) under the Death Benefit Plan and 60 monthly payments totaling $100,000 under the Deferred Compensation Plan. These amounts were not included in the estate tax return on Mr. Bahen's estate. On audit, the Commissioner of Internal Revenue made an additional assessment on the basis of his determination that the value at the decedent's death of the benefits payable under the two plans was includable in the gross estate. This additional assessment was paid, and a claim for refund was filed on July 28, 1959, and rejected on November 10, 1959.

The Government invokes each of four sections [§2036(a), §2037, §2038(a)(1), and §2039] as authority for the inclusion in Mr. Bahen's taxable estate of the value of his employer's payments to Mrs. Bahen under the two plans. We need consider only Section 2039, a new provision added to the estate tax in 1954 which for the first time established specific rules for the coverage of annuities and other survivor benefits. . . .

Section 2039 was a development of the earlier provisions of the estate tax which spoke of the decedent's "property" and of "transfers" by the decedent in contemplation of or taking effect at death. See Section 811 of the Internal Revenue Code of 1939. The new section does not use that phraseology but frames its operative requirements more directly in terms of particular types of transactions or arrangements involving the decedent. This change is significant. We must pay heed to the precise new form in which Congress cast its net and not become entangled in the older meshes.

A. *The Deferred Compensation Plan:* We first consider the application of Section 2039 (and the Regulations) to the C. & O.'s major plan, the Deferred Compensation Plan (of 1953) under which $100,000 was paid to Mrs. Bahen in a five-year span. As we read the section and the Regulations, they demand inclusion in the estate of the proceeds of this Plan. Every requirement is squarely met, not only in literal terms but in harmony with the legislative aim.

1. There is, initially, no doubt that the Plan, though adopted by the company unilaterally and without negotiation with the officers and employees, was a "form of contract or agreement" under the statute. This phrase is defined by Section 20.2039-1(b)(1)(ii) of the Treasury Regulations on Estate Tax to include "any arrangement, understanding or plan, or any combination of arrangements, understandings, or plans arising by reason of the decedent's employment." A compensation plan unilaterally adopted by the employer, but made irrevocable and communicated to the employee, falls directly within this definition, at least where the

employee continues in the company's service after the adoption of the plan.

2. There is likewise no doubt that Mrs. Bahen, the beneficiary, received "an annuity or other payment" under the statute when she was paid the $100,000 in sixty equal installments. The Regulations (Sec. 20.2039-1(b)(1)(ii)) appropriately say that this double term in Section 2039, as used with respect to both the beneficiary and the decedent, "has reference to one or more payments extending over any period of time," and that the payments may "be equal or unequal, conditional or unconditional, periodic or sporadic." See also S. Rept. No. 1622, 83d Cong., 2d Sess., at p. 470; H. Rept. No. 1337, 83d Cong., 2d Sess., at p. A315.

3. The next problem is whether at Mr. Bahen's death there was payable to him or he possessed the right to receive *"an annuity or other payment."* The Deferred Compensation Plan provided that, if Mr. Bahen became totally incapacitated for further performance of duty before retirement, the C. & O. would pay him the $100,000 in 60 equal monthly installments. Under both the normal understanding of the statutory words "annuity or other payment" and the broad definition given them by the Regulations (referred to above), these sums must be characterized as at least an "other payment." Stressing Congress's use of the singular "payment") and a reference in the Senate Committee report to a lump-sum payment in lieu of an annuity, plaintiff appears to urge that the *only* "payment" to a decedent covered by Section 2039 is a lump sum paid or payable in the place of a strict lifetime annuity (i.e., an annuity paid in the form of a lump sum). But we cannot confine the general language of Section 2039, as interpreted by the Regulations, within the limits of one illustration given by the Committee as a reason for adding the all-inclusive words "other payment" to "annuity." [1] As we point out more in detail below, the history and pattern of Section 2039 fail to indicate that it deals only with true lifetime annuities (in installment form or in a commuted lump sum). The statute covers — as an "other payment," at least — disability compensation benefits of the type involved here.

4. Were these benefit payments — assuming, as we have just decided, that they constituted an "annuity or other payment" within Section 2039 — "payable to" Mr. Bahen at his death or did he "possess the right to receive such annuity or payment"? The Regulations (Sec. 20.2039-1(1)(ii)) establish that amounts are "payable" to a decedent "if, at the time of his death, the decedent was in fact receiving an annuity or other payments, whether or not he had an enforceable right to have payments continue." Since Mr. Bahen was not receiving disability benefits when he died, this term of the statute is not satisfied.

We hold, however, that at his death Mr. Bahen did "possess the right" to receive the disability payments in the future if certain conditions were fulfilled, and therefore that the alternative requirement of Section 2039 is met. The intentional juxtaposition in the statute of amounts "payable" and those the decedent "possessed the right to receive" indicates that the former relates to the present (i.e., at time of death) and the latter to the future. The Regulations make clear that, in circumstances like these, the decedent's interest in future benefits, even if contingent, is sufficient. Where the employer has offered a plan of this kind, the employee's compliance with his obligations to the company gives him "an enforceable right to receive payments in the future, whether or not, at the time of his death, he had a present right to receive payments." This provision

---

[1] Since the Deferred Compensation Plan provided that, in case of Mr. Bahen's disability, the $100,000 would be paid to him in 60 equal installments, it may also be possible to consider it an "annuity" — leaving aside "other payment" — within the meaning of Section 2039. The Senate Committee said that for the purposes of the section "the term 'annuity' includes periodic payments for a specified period of time." S. Rept. No. 1622, 83d Cong., 2d Sess., p. 470 (and see example (5)); see also H. Rept. No. 1337, 83d Cong., 2d Sess., at p. A315 (example (5)).

of the Regulations both governs the Deferred Compensation Plan and faithfully reflects its essential characteristics. The arrangement may have been unilateral in inception but it was also irrevocable, and its irrevocability was deliberately communicated to the individuals covered. It thus became an integral article of Mr. Bahen's terms of employment by the C. & O. See S. Rept. No. 1622, 83d Cong., 2d Sess., at p. 471, quoted in paragraph 6, infra. There can be no doubt that he and the others relied upon the Plan, as they were expected to do. See Worthen v. United States, 192 F. Supp. 727, 734 (D. Mass.). The right they possessed may have been contingent but it was not at the whim of the employer. Neuffer v. Bakery and Confectionery Workers, D.C. Cir., 1962, 307 F.2d 671.

In answer, the plaintiff insists that the decedent cannot be considered to have "possessed the right to receive" these disability payments because they were contingent on his becoming totally disabled before retirement, and would never have been received had he lived healthily to retirement age. Only future payments which are sure to be paid if the decedent lives to a designated time are covered by Section 2039, plaintiff says. However, as we have pointed out, in specifically covering amounts not payable to the decedent at the time of his death but which he then had merely the "right to receive," the statute and the Regulations obviously cover sums becoming due in the future; and there is no support in the statute's language for the distinction plaintiff makes between the different types of such future payments (at least if they are not forfeitable at the will of another). Both classes of payment are contingent and neither is sure. A benefit payable only if a man lives to a certain age is conditioned upon his living that long, just as a benefit payable only if he becomes disabled is conditional on his future disability.[2] Any distinction between the types seems rejected by the Regulations which include "conditional" payments without qualification. Moreover, the comparable term "right to income" in related earlier provisions of the estate tax (such as present §2036 . . .) has been in effect read as including a contingent right to receive income. See, e.g., Marks v. Higgins, 213 F.2d 884 (C.A. 2); . . . The legislative history of Section 2039 suggests that the rules applicable under Section 2036, in this connection, should likewise control under the new provision. S. Rept. No. 1622, 83d Cong., 2d Sess., at p. 472; H. Rept. No. 1337, 83d Cong., 2d Sess., at p. A316; see Stephens and Marr, Federal Estate and Gift Taxes (1959), pp. 108-109.

5. Another requirement of Section 2039 is that the decedent's right to receive payments must be possessed "for his life or for any period not ascertainable without reference to his death or for any period which does not in fact end before his death." For the period from February 1953, when the Deferred Compensation Plan was adopted, to his death in November 1955, Mr. Bahen had the right to receive, under this Plan, $100,000 in 60 installments upon his total disability prior to retirement. He thus possessed the right to receive this "annuity or other payment" for a period which did not in fact end before his death — and, accordingly, this element of Section 2039 is also present. The correctness of this conclusion is shown by the Regulations (Sec. 20.2039-1(b)(2)), Example (5) of which concerns a plan under which an employer-contributed fund is to be divided, on retirement at age 60, one-half in a lump sum to the employee and one-half to his beneficiary, the entire amount going to the beneficiary if the employee died

[2] In the light of the wording, background, and purpose of Section 2039, it would be far too narrow a construction to limit the "right to receive" element to those few future payments which the decedent was *certain* to receive, i.e., amounts which would inevitably come to him or (if he were dead) to his heirs. In any event, the Regulations do not so confine the section and we cannot say that the statute is so unambiguously to the contrary that the Regulations are unreasonable or invalid.

before retiring. The Regulations state that if the employee dies before retirement the payment to the beneficiary is includable in gross estate under Section 2039 because "the decedent possessed the right to receive a lump sum payment [at retirement] for a period which did not in fact end before his death [before retirement]." This regulation is consistent with the holdings, under older provisions of the estate tax, relating to the meaning of the phrase "for any period which does not in fact end before his death" . . . Marks v. Higgins, supra, . . . — rulings which Congress has indicated should be applied under Section 2039. S. Rept. No. 1622, 83d Cong., 2d Sess., at p. 472; H. Rept. No. 1337, 83d Cong., 2d Sess., at p. A316.

6. The last element necessary for coverage by Section 2039 is that Mr. Bahen must have "contributed" the "purchase price" of the "annuity or other payment" received by Mrs. Bahen which is to be included in the taxable estate. Subsection (b), which adds this requirement, provides:

> (b) *Amount includible.* — Subsection (a) shall apply to only such part of the value of the annuity or other payment receivable under such contract or agreement as is proportionate to that part of the purchase price therefor contributed by the decedent. For purposes of this section, any contribution by the decedent's employer or former employer to the purchased price of such contract or agreement (whether or not to an employee's trust or fund forming part of a pension, annuity, retirement, bonus or profit sharing plan) shall be considered to be contributed by the decedent if made by reason of his employment.

The second sentence of this subsection automatically attributes the employer's contribution to the employee "if made by reason of his employment." This phrase is given broad scope by the Senate Committee Report (S. Rept. No. 1622, 83d Cong., 2d Sess., at p. 471) which holds that it applies "if, for example, the annuity or other payment is offered by the employer as an inducement to employment, or a continuance thereof, or if the contributions are made by the employer in lieu of additional compensation or other rights, if so understood by employer and employee whether or not expressly stated in the contract of employment or otherwise." The Deferred Compensation Plan, we have already noted, plainly meets this standard; it was an inducement to continued service with the C. & O. It is immaterial, we think, that the company did not formally make "contributions" to a separate fund, or actually purchase annuity or like contracts. Section 2039(b) does not use the words "contribution," "contributed," or "purchase price" in a narrow literal sense, any more than subsection (a) uses "contract or agreement" in that rigid fashion. The section deals, for the area it covers, with the substance of transactions, not with the mechanical way they happen to be formulated. The C. & O.'s undertaking to make payment under the Plan was its "contribution," made by reason of the decedent's employment. Congress did not demand that the company create a tangible fund as a condition to coverage of its employees under this new estate tax provision, and so far as we can see there would be no reason to impose that requirement in a taxing statute such as this.

7. To all of this the plaintiff — in addition to challenging the existence in this case of some individual elements of coverage — protests that despite its literal language Section 2039 is applicable only where there is a true lifetime annuity payable to the decedent for life. Plaintiff correctly points out that the main impetus for the new section was the doubt in 1954 that the former estate tax provisions covered conventional joint and survivor annuities purchased wholly or partly *by the decedent's employer* (as distinguished from those purchased by the decedent himself). S. Rept. No. 1622, 83d Cong., 2d Sess., at p. 123; H. Rept. No. 1337, 83d Cong., 2d Sess., at p. 90. But the committee reports do not indicate that Congress, although using language in Section 2039 which goes well beyond

the precise situation which initially impelled the change, restricted the scope of the new provision to those very circumstances alone. We find nothing to show that Congress desired the broader words it carefully used in Section 2039 not to have their normal significance and application; indeed some of the examples and words Congress used in the Committee Reports (see the references, supra) show that wider coverage was plainly intended. And the Treasury Regulations, as our prior discussion explains, cover annuities and payments to a decedent other than a full lifetime annuity.

8. Finally, we note briefly that Section 2039, as we construe it, is harmonious with the general objective of the federal estate tax to include in the decedent's estate (with designated exceptions) the valuable interests belonging to, accumulated by, or created by or for him, which pass to others at his death. Many such benefits promised, given, and paid for by an employer were specifically brought within this framework by the new section in 1954. In subsection (b), quoted above, Congress provides that contributions by the employer "shall be considered to be contributed by the decedent if made by reason of his employment." Phrased in terms of the earlier concepts of a decedent's "property" "transferred" at his death, Section 2039 declares that annuities or other payments payable by an employer to his employee, and on his death to a beneficiary, constitute his property — created by him through his employer as part of the employment arrangement and in consideration of his continued services — which is transferred to another at his death. See the discussion in Lehman v. Commissioner, 109 F.2d 99, 100 (C.A. 2); and Worthen v. United States, 192 F. Supp. 727, 733-4 (D. Mass.). A new provision of the estate tax which attempts to apply these fundamental concepts to a fairly well understood set of concrete situations should not be grudgingly read so as to chip away at the specific rule and to continue (as in the past) to leave as much as possible to the ambiguities of the general sections.

Plaintiff does not attack the validity of Section 2039, interpreted as we read it, and any challenge would be baseless under the accepted principles marking the outer boundaries of the constitutional power of Congress to levy the estate tax. See, e.g., United States v. Manufacturers National Bank [infra p. 1246]; Fernandez v. Wiener [supra p. 1106]; . . .

B. *The Death Benefit Plan:* It is a more difficult question whether the Death Benefit Plan — under which the C. & O. paid Mrs. Bahen a sum equal to Mr. Bahen's salary for three months — is covered by Section 2039. Under that arrangement no benefits were payable to the decedent during his life, and if the Plan were to be judged by itself it would fall outside the ambit of the section for lack of "an annuity or other payment" to the decedent. The defendant contends that this factor is present because the words "or other payment" can include the decedent-employee's regular salary; the Death Benefit Plan must be taken, defendant says, together with Mr. Bahen's entire employment arrangement including his ordinary compensation. We cannot agree. Since employees normally receive salary or wages, defendant's interpretation would effectively obliterate, for almost all employees, the express requirement in Section 2039 of "an annuity or other payment" to the decedent. If Congress had intended that strange result, it would certainly have mentioned or referred to it.[3] The Government's argument also

[3] The Government points to Example (4) in the Senate Report (S. Rept. No. 1622, 83d Cong., 2d Sess. at p. 470) — which on the surface omits any "annuity or other payment" to the decedent and therefore, according to the Government, must incorporate the employee's salary as satisfying that element — but we agree that this interpretation of the example cannot be correct. See Bittker, Estate and Gift Taxation under the 1954 Code: The Principal Changes, 29 Tul. L. Rev. 453, 469-470, fn. 58 (1955); Pincus, Estate Taxation of Annuities and Other Payments, 44 Va. L. Rev. 857, 866-867 (1958).

runs counter to the theory and examples of the Regulations (Sec. 20.2039-1) which impliedly exclude ordinary salary from consideration.

But the Government makes another point which we do accept as bringing the Death Benefit Plan under Section 2039. The suggestion is that this Plan should not be viewed in isolation but must be considered together with the Deferred Compensation Plan — as if both arrangements were combined into one plan, providing two types of benefits for beneficiaries after the employee's death but only one type of benefit (disability compensation) to the employee himself. There is some factual support, if that be necessary, for looking at the two plans together, since the Death Benefit Plan was adopted in January 1952 and the Deferred Compensation Plan only a year later in February 1953. There appears to be a common genesis and a unifying thread.

The firmer legal basis is provided by the Regulations (Sec. 20.2039-1(b)(2), Example (6)) which provide: "All rights and benefits accruing to an employee and to others by reason of the employment (except rights and benefits accruing under certain plans meeting the requirements of section 401(a) (see §20.2039-2)) are considered together in determining whether or not section 2039(a) and (b) applies. The scope of Section 2039(a) and (b) cannot be limited by indirection." Effect must be given to this declaration, adopted pursuant to the Treasury's recognized power to issue regulations and not challenged by plaintiff, since it does not violate the terms or the spirit of Section 2039. In view of the general purpose of the statute to cover a large share of employer-contributed payments to an employee's survivors, it is not unreasonable to lump together all of the employer's various benefit plans taking account of the employee's death (except those qualified under Section 401(a), which are excepted by [§2039(c)]) in order to decide whether and to what extent Section 2039 applies to his estate. There is no immutable requirement in the legislation that each plan separately adopted by a company must be considered alone. One good ground for rejecting that position is to prevent attempts to avoid the reach of the statute by a series of contrived plans none of which, in itself, would fall under the section.[4]

This directive in the Regulations that all rights and benefits "are to be considered together" — read with another part of the same Regulation which defines "contract or agreement" under Section 2039 to cover "any combination of arrangements, understandings, or plans arising by reason of the decedent's employment" — requires the two plans of the C. & O. to be deemed a coordinated whole for the purposes of Section 2039. On that view the payments under the Death Benefit Plan were includable in the decedent's gross estate for the reasons given above with respect to the Deferred Compensation Plan. If the two Plans are integrated into one, each element required for coverage of all payments is present.

We conclude that the plaintiff is not entitled to a refund of the estate taxes assessed because of the inclusion by the Commissioner of Internal Revenue in the decedent's estate of the value of the benefits paid by the C. & O. to his widow under the two plans. Judgment will be entered for the defendant and the petition will be dismissed.

It is so ordered.

JONES, Chief Judge, and DURFEE, and LARAMORE, Judges, concur.

WHITAKER, Judge (concurring).

This case presents what is to me a novel problem. The Deferred Compensation Plan of the C. & O. Railway was adopted solely on its own initiative; it was

[4] There is no suggestion that the two plans in this case, which were adopted in 1952 and 1953 before Section 2039 was enacted, formed part of any such scheme. But the statute and the Regulation can establish a prophylactic across-the-board rule applicable to all cases, regardless of the purity of motivation in a particular instance.

not the result of bargaining between the railroad and its officers. At the death of the employee the railroad paid to the employee's beneficiaries the amount it had voluntarily agreed to pay. Hence, it has been difficult for me to discern any transfer from the decedent to the beneficiaries. If there was no transfer from him to them, the amount they received under the Plan could not constitutionally be included in his gross estate for estate tax purposes.

The Constitution, art. 1, §9, cl. 4 provides that "No Capitation, or other direct, Tax shall be laid, unless in Proportion to the Census . . ." This prohibits the levy of a direct tax on this property. Only the states can levy such a tax.

I suppose this constitutional prohibition has so far survived the innovations of modern constitutional "interpretation." If it has, the Federal Government has no power to tax property passing at death unless it can be justified as an excise tax. It was so justified by the Supreme Court in Knowlton v. Moore, 178 U.S. 41, as a tax on the privilege of transmitting property at death to the survivors of the decedent. The rationale of that decision is well known and I shall not elaborate on it in this opinion.

It follows from this, it seems to me, that, if the decedent did not transfer this property at death, it cannot be included in his gross estate for estate tax purposes. The question then is, did the decedent transfer it?

Although the Plan was initiated by the railroad and was wholly of its own volition, nevertheless, the Plan did contain this provision:

> In any case, an officer leaving the service of the Company for any reason other than death, incapacity as hereinbefore defined, or retirement, shall forfeit all benefits under the Deferred Compensation Plan.

Under this I suppose it is not unreasonable to say that, by the act of continuing in the employ of the railroad, the employee made it possible for his beneficiaries to receive what the railroad agreed to pay them. They were entitled to benefits under the Plan only if the employee remained with the railroad until death or until he was eligible for retirement. Therefore, by remaining with the company, he fulfilled that condition without which the beneficiaries would have been entitled to nothing. So it can be said, and properly so, I suppose, that the decedent "had a hand" in the transmission of the property to the beneficiaries, and, hence, Congress intended it to be included in his gross estate.

I concur.

NOTE

1. *Voluntary payments and §2039.* The employer was contractually obligated to make the payments in *Bahen's Estate.* In Barr's Estate v. Commissioner, supra page 1082, the government cited §2039 (as well as §2033) as authority for including the benefits paid to the employee's widow in his gross estate, but the §2039 claim was rejected for want of a contract or agreement:

> The repeated reference [in §2039(a) and (b)] to the requirement for some form of contract or agreement, indicates that the rights of both the decedent and the survivor must be enforceable rights; and that voluntary and gratuitous payments by the employer are not taxable under section 2039. This is expressly recognized in Example (4) of [Regs. §20.2039-1(b)]. However, this same example does state that where the terms of an enforceable retirement plan have been modified by consistent practice of the employ, the annuity received pursuant to such modification will be considered to have been paid under a "contract or agreement." We do not think that the latter statement was intended to mean that where there was no enforceable arrangement, contract or agreement whatever, the mere consistency of an employer in making voluntary or gratuitous payments would be sufficient to supply the essential "contract

or agreement." Congress, for reasons satisfactory to it, has made the existence of some form of "contract or agreement" an indispensable prerequisite to the application of section 2039.

In the instant case, as we have hereinbefore found, there was no express contract entered into between decedent and Eastman, under which his widow would be entitled to receive any wage dividend that the board of directors might declare subsequent to his death. And the creation of any contract by implication is negatived, not only by the fact that Eastman did not pay a wage dividend death benefit to the survivors in every case; but also by the fact that its rules for participation made it clear that employees who died before the end of the Kodak year would receive benefits only at the company's option — as distinguished from employees who survived until after close of the Kodak year, and thereby became entitled to have the wage dividend paid to their estates or survivors "as a matter of right." [40 T.C. at 170.]

2. *Life insurance unaffected by §2039.* Section 2039 does not embrace amounts payable "as insurance under policies on the life of the decedent." In All v. McCobb, 321 F.2d 633 (2d Cir. 1963), a determination by the District Court that a payment by Standard Oil Company (New Jersey) under its "death benefit plan" constituted life insurance was reversed:

> The statute thus clearly calls for inclusion in the decedent's gross estate of the death benefits paid to the widow, unless these benefits can be found to have been insurance, as the district court found. It based this finding upon the ground that "the payments in this case were designed to provide partial protection for one year to her as a dependent beneficiary against loss of retirement allowances to her husband through his untimely death." 206 F. Supp. at 903. We hold that this finding is without support and cannot be sustained. The fact that a payment is designed to afford a widow partial protection against the difficulties presented by her husband's death does not, ipso facto, convert that payment into insurance. The function of providing partial protection to widows is characteristic of a great many survivorship annuities and payments which nevertheless are not insurance for purposes of federal estate taxation and which are includable within a decedent's gross estate and taxable as such under §2039. See Comment, 66 Yale L.J. 1217, 1238-48 (1957). It is thus necessary to carry the analysis beyond the point of merely concluding that the payments to the widow provided her with partial protection after the death of her husband, because that conclusion cannot logically be dispositive. [321 F.2d at 636.]

The court then quoted from the definitions of "life insurance" in the *LeGierse* and *Treganowan* cases, infra pages 1255 and 1257, and concluded:

> Judged by the standards of *LeGierse* and *Treganowan*, the Death Benefit Plan bears no resemblance to a life insurance program. The Plan was unfunded and the company did not make periodic contributions to it in the employee's name. "Premium payments [were] not required, nor [was] there a shifting and spreading of the risk of death in any meaningful sense." Essenfeld v. Commissioner, 311 F.2d 208, 209 (2 Cir., 1962). The decedent in no way shifted to the company the risk that his death would come prematurely and before the company, as insurer, had received premiums by or on his account in a sum equal to the amount required to be paid to the beneficiary. The company in no way gambled with the decedent that he would live a long life and that it would recover by periodic assessments before his death the amount to be paid to the beneficiary. It made no difference to the company, so far as any fund was concerned, whether the decedent died prematurely or not. Cf. Old Colony Trust Co. v. Commissioner, 102 F.2d 380 (1st Cir., 1939). Nor did the company in any way undertake to distribute among a larger group of employees, on the basis of actuarial data from which the appropriate size of a terminal reserve could be computed, the risk of the premature death of a single employee. The company did nothing more than promise to pay a sum certain to a named beneficiary upon the death of a retired employee. If payments resulting from such a promise were under the present facts to be regarded as insurance, the effectiveness and significance of §2039 would be greatly diminished, if not vitiated.

Even if the Death Benefit Plan were to be considered together with the Annuity Plan as a "coordinated system of payments to employees in consideration for their services," Essenfeld v. Commissioner, 311 F.2d at 209, the result would remain the same. The Treasury Regulations provide that "A combination annuity contract and life insurance policy on the decedent's life (e.g., a 'retirement income' policy with death benefits) which matured during the decedent's lifetime so that there was no longer an insurance element under the contract at the time of the decedent's death is subject to the provisions of §2039(a) and (b)." Treas. Reg. §20.2039-1(d). [321 F.2d at 637.]

3. *Payments under "qualified pension plans."* Section 2039(c) provides that the value of an annuity receivable under a qualified pension or similar plan is excludable from the gross estate, unless it is receivable by the executor or attributable to payments or contributions by the decedent. The reason for granting this exclusion is not apparent; if the survivor's rights were analogized to rights under a life insurance policy, it is surprising that there is no requirement that the decedent give up the incidents of ownership in the contract (see p. 1247 infra). Since §2039(c) provides for an exclusion "notwithstanding the provisions of this section or of any provision of law," a right in the decedent to change the beneficiary or to surrender the contract for cash will not be fatal as it would be in the case of life insurance. Moreover, there will ordinarily be no gift tax on the creation of the survivor's rights, by virtue of §2517, enacted in 1962. If the estate tax exclusion was granted on the assumption that benefits under qualified plans are ordinarily minor in amount, it should be noted that that exclusion is needed only if the estate exceeds $60,000 in amount or, in the case of a married decedent who takes full advantage of the marital deduction, $120,000. The rights of the survivor under a qualified plan now constitute a unique class of property that escapes the estate tax despite the retention by the decedent of complete control over the rights of the beneficiary.

Rev. 857 (1958); Zissman, Problem Areas in the Estate Tax, 41 Taxes 875, 884-890 (1963); Murphy, The Survivorship Annuity: Estate Tax Kaleidoscope, 1 How. L.J. 1 (1955); Meisenholder, Taxation of Annuity Contracts Under Estate and Inheritance Taxes, 39 Mich. L. Rev. 856 (1941) (antedates §2039, but still useful).

CHAPTER 14

Life Insurance and Powers of Appointment

SECTION A. LIFE INSURANCE

1. *Policies on the Life of the Decedent: §2042**

Pre-1942 treatment of insurance on the decedent's life. The Revenue Act of 1916 made no mention of life insurance, with the consequence that proceeds of insurance policies on the life of the decedent were included in his gross estate only when the predecessor of §2033 was applicable. This meant that policies payable to the decedent's estate were taxable, but not policies payable to designated beneficiaries. In the Revenue Act of 1918, however, Congress included a provision — the forerunner of §2042 — dealing specifically with insurance on the life of the decedent. Although the principal purpose of the 1918 legislation was to reach policies payable to designated beneficiaries, it also provided that insurance proceeds "receivable by the executor" were includible in the gross estate. The latter provision has been carried forward to the present, and it now appears as §2042(1). It reaches insurance proceeds that are available for payment of the decedent's debts even though not in form payable to the executor. Matthews' Estate v. Commissioner, 3 T.C. 525 (1944). Conversely, proceeds payable in form to the executor may escape §2042(1) if local law immunizes them from liability for the decedent's debts so that the executor holds them for the benefit of others. Flick's Estate v. Commissioner, 166 F.2d 733 (5th Cir. 1948); United States v. First National Bank & Trust Co. of Minneapolis, 133 F.2d 886 (8th Cir. 1943).

The more troublesome part of the 1918 legislation dealt with policies payable not to the executor but to other beneficiaries. It provided for the inclusion of amounts "receivable by all other beneficiaries as insurance under policies taken out by the decedent upon his own life," except that the first $40,000 of such proceeds was exempt. The innocent phrase "policies taken out by the decedent" was productive of nothing but trouble. If the 1918 legislation was to be of any consequence, it could not be limited to policies actually applied for by the decedent. Whether the decedent signed the formal application or not, the policy would serve as a device for transmitting wealth from one generation to another if the decedent paid the premiums. Moreover, even if the decedent neither applied for the policy nor paid the premiums, he could effect the transmission of wealth if he held until his death the power to name or change the beneficiary, to assign or pledge the policy, or to surrender it for its cash value. Was a policy "taken out by the decedent" if he paid the premiums or if he possessed the "incidents of ownership"? Were both necessary? During the long period that the statute included the phrase "taken out by the decedent," regulation succeeded regulation as the Treasury Department turned from one construction to another like a whirling dervish. Its dizzy antics, which were in part an effort to propitiate the courts, are described in Eisenstein, Estate Taxes and the Higher Learn-

* Section 2042 applies only to policies of insurance on the life of the decedent himself. For the treatment of policies on the life of another person, which were owned or paid for by the decedent, see page 1258 infra.

ing of the Supreme Court, 3 Tax L. Rev. 395, 513-536 (1948); Schlesinger, Taxes and Insurance: A Suggested Solution to the Uncertain Cost of Dying, 55 Harv. L. Rev. 226 (1941); Paul, Life Insurance and the Federal Estate Tax, 52 id. 1037 (1939).

1942-1954: The "premiums paid" and "incidents of ownership" tests. Congress finally intervened. The Revenue Act of 1942 wiped out the $40,000 exemption for policies payable to beneficiaries (simultaneously increasing the over-all estate tax exemption from $40,000 to $60,000) and eliminated the troublesome words "taken out by the decedent." It went on to provide that insurance proceeds payable to designated beneficiaries were includible in the decedent's gross estate if he *either* (1) had paid the premiums directly or indirectly, *or* (2) possessed at the time of his death any of the "incidents of ownership" exercisable either alone or in conjunction with any other person.

Because the "premiums paid" test required the insurance proceeds to be included in the insured's gross estate even though he retained no control over the policy, its constitutionality was attacked on the ground that it was a "direct tax" on the property, invalid because not apportioned among the states in proportion to population. This theory was rejected by the Supreme Court in United States v. Manufacturers National Bank, 363 U.S. 194, 198-199 (1960):

From its inception, the estate tax has been a tax on a class of events which Congress has chosen to label, in the provision which actually imposes the tax, "the *transfer* of the net estate of every decedent." See New York Trust Co. v. Eisner, 256 U.S. 345. If there is any taxable event here which can fairly be said to be a "transfer" . . . , the tax is clearly constitutional without apportionment. For such a tax has always "been treated as a duty of excise, because of the particular occasion which gives rise to its levy." Knowlton v. Moore, 178 U.S. 41, 81; New York Trust Co. v. Eisner, supra, at 349.

Under the statute, the occasion for the tax is the maturing of the beneficiaries' right to the proceeds upon the death of the insured. Of course, if the insured possessed no policy rights, there is no transfer of any interest *from him* at the moment of death. But that fact is not material, for the taxable "transfer," the maturing of the beneficiaries' right to the proceeds, is the crucial last step in what Congress can reasonably treat as a testamentary disposition by the insured in favor of the beneficiaries. That disposition, which began with the payment of premiums by the insured, is completed by his death. His death creates a genuine enlargement of the beneficiaries' rights. It is the "generating source" of the full value of the proceeds. See Schwarz v. United States, 170 F. Supp. 2, 6. The maturing of the right to proceeds is therefore an appropriate occasion for taxing the transaction to the estate of the insured. Cf. Tyler v. United States, 281 U.S. 497, 503, 504.

There is no inconsistency between such a view of the taxable event and the basic definition of the subject of the tax in [§2001]. "Obviously, the word 'transfer' in the statute, or the privilege which may constitutionally be taxed, cannot be taken in such a restricted sense as to refer only to the passing of particular items of property directly from the decedent to the transferee. It must . . . at least include the transfer of property procured through expenditures by the decedent with the purpose, effected at his death, of having it pass to another." Chase National Bank v. United States, 278 U.S. 327, 337.

It makes no difference that the payment of premiums occurred during the lifetime of the insured and indirectly effected an inter vivos transfer of property to the owner of the policy rights. Congress can properly impose excise taxes on wholly inter vivos gifts. Bromley v. McCaughn, 280 U.S. 124. It may impose an estate tax on inter vivos transfers looking toward death. Milliken v. United States, 283 U.S. 15. Surely, then it may impose such a tax on the final step — the maturing of the right to proceeds — in a partly inter vivos transaction completed by death. The question is not whether there has been, in the strict sense of the word, a "transfer" of property owned by the decedent at the time of his death, but whether "the death has brought into being or ripened for the

survivor, property rights of such character as to make appropriate the imposition of a tax upon that result. . . ." Tyler v. United States, supra, at 503.

The Court also rejected an attack on the constitutionality of the 1942 provision, based on the fact that some of the premiums were paid before 1942; the change of law did not offend the due process clause of the Fifth Amendment because it was not "a wholly arbitrary thing."

The "premiums paid" test of the 1942 law applied to premiums paid "indirectly" by the insured, as well as to those paid directly. For some of the "tracing" problems that arose because of this aspect of the provision, see Loeb's Estate v. Commissioner, 29 T.C. 22 (1957); see also Carlton's Estate v. Commissioner, 298 F.2d 415 (2d Cir. 1962) (premiums treated as paid by grantor of funded insurance trust); supra page 1114 (re payment of consideration for jointly held property).

The alternative basis for including life insurance proceeds in the insured's gross estate under the 1942 law was his retention of any of the "incidents of ownership." This term was defined by the Regulations as follows:

> Incidents of ownership in the policy include, for example, the right of the insured or his estate to its economic benefits, the power to change the beneficiary, to surrender or cancel the policy, to assign it, to revoke an assignment, to pledge it for a loan, or to obtain from the insurer a loan against the surrender value of the policy, etc. [Regs. 105 §81.27(c).]

The 1942 law did provide, however, that a reversionary interest was not an "incident of ownership." But if the decedent possessed a reversionary interest (e.g., if the proceeds would be payable to his estate should the beneficiary predecease him), the proceeds might have been reached by the postponed-possession-or-enjoyment clause of old §811(c).

The 1954 Code: elimination of "premiums paid" test. The 1954 Code made two changes in this pattern of taxing proceeds payable to named beneficiaries. It eliminated the premiums paid test; and it provided that a reversionary interest is an "incident of ownership" if its value exceeded 5 per cent of the value of the policy immediately before the death of the decedent.

The elimination of the premiums paid test was perhaps the 1954 Code's most important innovation in the estate tax law. The Senate Report stated (p. 124):

> No other property is subject to estate tax where the decedent initially purchased it and then long before his death gave away all rights to the property and to discriminate against life insurance in this regard is not justified.

Opposing the change, a minority of the House Ways and Means Committee said:

> Under present law, if a husband transfers ownership of an insurance policy on his life to his wife, but continues to pay the premiums himself, the proceeds are still considered to be a part of the estate he leaves his wife on his death and are, therefore, included in his estate in computing the estate tax.
>
> It is sought to justify the change as merely putting life insurance on a par with other property which may be given away free from estate tax if the gift is not made "in contemplation of death." But life insurance is not like other property. It is inherently testamentary in nature. It is designed, in effect, to serve as a will, regardless of its investment features. Where the insured has paid the premiums on life insurance for the purpose of adding to what he leaves behind at his death for his beneficiaries, the insurance proceeds should certainly be included in his taxable estate.
>
> We predict that if this provision becomes law, it will virtually do away with the estate taxation of life insurance. To avoid the tax, the insured need only assign the policy to his wife or other beneficiary. Since estates of less than $60,000 are nontaxable, only the wealthy will benefit. Nevertheless, we predict that the estate-tax revenue loss will be sub-

stantial. Doubtless life insurance will come into great favor among persons of wealth as a means of avoiding estate taxes.

The proposal goes even further than the method of taxing life-insurance proceeds as a part of estates that prevailed prior to 1942, when an exclusion of $40,000 was provided, which Congress eliminated in the Revenue Act of 1942. [H.R. Rept. No. 1337, 83d Cong., 2d Sess., B14-15.]

From 1942 to 1954, the incidents of ownership test was not of great importance, since in most cases the head of the family could not avoid paying the premiums on his insurance directly or indirectly, and consequently the proceeds would be includible under the premiums paid test. Under the 1954 Code, however, the insured can pay the premiums himself and at the same time keep the proceeds out of his estate by ridding himself of the incidents of ownership. The right to change beneficiaries, to surrender the policy for cash, to pledge it for a loan, to assign it, can be given up easily enough, if the insured wishes to do so. A reversionary interest can be avoided by providing that the proceeds are to be paid to a designated beneficiary or, if he predeceases the insured, to the beneficiary's estate. Moreover, the Regulations provide, in §20.2042-1(c)(3), that the terms "reversionary interest" and "incidents of ownership" do not include the possibility that the insured might receive a policy or its proceeds by inheritance or as a surviving spouse by election. See Mannheimer, Wheeler and Friedman, Gifts of Life Insurance by the Insured, 13 N.Y.U. Inst. on Fed. Taxation (1955) 247, 251 (1955); reprinted in 33 Taxes 299, 301 (1955).

The Senate Report states (p. 473):

In determining whether [a reversionary interest] exceeded 5 percent, this section [§2042] provides rules substantially the same as prescribed in section 2037 for determining whether, in the case of certain transfers, the decedent retained a reversionary interest in the transferred property.

In applying the 5 per cent rule, how is "the value of the policy immediately before the death of the decedent" to be determined? Is it the cash surrender value? See Guggenheim v. Rasquin, infra. If the decedent "immediately" before his death was suffering from a protracted illness, or was in an automobile that had just gone over a cliff, is the "value" of the policy its full face amount?

Gift tax on transfers of insurance contracts and payments of premiums. The repeal of the premiums paid test in 1942 brought in its train many transfers of policies that had been in force for some time. The transfer of such a policy is a "gift" under §2511(a), and a gift tax may be due. How is the policy to be valued? In Guggenheim v. Rasquin, 312 U.S. 254 (1941), a donor made a gift of three single-premium life insurance policies (with an aggregate face amount of $1,000,000) immediately after purchasing them. Although she had paid about $852,000 in premiums, the cash surrender value of the policies was only about $717,000, and she valued them at the lower amount on her gift tax return. The Supreme Court held that the proper value was her cost:

Cash-surrender value is the reserve less a surrender charge. And in case of a single-premium policy the reserve is the face amount of the contract discounted at a specified rate of interest on the basis of the insured's expected life. If the policy is surrendered, the company will pay the cash-surrender value. It is asserted that the market for insurance contracts is usually the issuing companies or the banks who will lend money on them; that banks will not loan more than the cash-surrender value; and that if policies had an actual realizable value in excess of their cash-surrender value, there would arise a business of purchasing such policies from those who otherwise would surrender them. From these facts it is urged that cash-surrender value represents the amount which would be actually obtained for the policies in a willing buyer-willing seller market. . . .

That analysis, however, overlooks the nature of the property interest which is being valued. Surrender of a policy represents only one of the rights of the insured or beneficiary. Plainly that right is one of the substantial legal incidents of ownership. . . . But the owner of a fully paid life insurance policy has more than the mere right to surrender it; he has the right to retain it for its investment virtues and to receive the face amount of the policy upon the insured's death. That these latter rights are deemed by purchasers of insurance to have substantial value is clear from the difference between the cost of a single-premium policy and its immediate or early cash-surrender value — in the instant case over $135,000. All of the economic benefits of a policy must be taken into consideration in determining its value for gift-tax purposes. To single out one and to disregard the others is in effect to substitute a different property interest for the one which was the subject of the gift. In this situation as in others (Susquehanna Power Co. v. State Tax Comm'n, 283 U.S. 291, 296) an important element in the value of the property is the use to which it may be put. Certainly the petitioner here did not expend $852,438.50 to make an immediate gift limited to $717,344.81. Presumptively the value of these policies at the date of the gift was the amount which the insured had expended to acquire them. Cost is cogent evidence of value. And here it is the only suggested criterion which reflects the value to the owner of the entire bundle of rights in a single-premium policy — the right to retain it as well as the right to surrender it. Cost in this situation is not market price in the normal sense of the term. But the absence of market price is no barrier to valuation. [312 U.S. at 256-257.]

Although the Supreme Court held that the cost of the policy was the proper measure of its value in this case, the cash surrender value of a policy that has been in force for some time might exceed the aggregate premiums paid. Moreover, neither the cash surrender value nor the aggregate cost is a fair index of the value of the policy if the insured has become uninsurable. In United States v. Ryerson, 312 U.S. 260, 261-262 (1941), the Court said of a gift of such policies:

The cost of duplicating the policies at the dates of the gifts is, in absence of more cogent evidence, the one criterion which reflects both their insurance and investment value to the owner at that time. . . . The fact that the then condition of an insured's health might make him uninsurable emphasizes the conclusion that the use of that criterion will result in placing a minimum value upon such a gift.

See also Regs. §25.2512-6 (use of "terminal reserve" in computing value of life insurance contract); Goodman v. Commissioner, 156 F.2d 218 (2d Cir. 1946).

Is the transfer of a policy or the subsequent payment of premiums a gift of a present or of a future interest? Does this depend on whether the policy has a cash surrender value? On whether the donee could surrender it for cash without undue sacrifice of its other values? See Rev. Rul. 55-408, 1955-1 C.B. 113 (exclusion applies to unqualified assignment of insurance policy, despite absence of cash surrender value).

Transfers of insurance and payments of premiums as gifts in contemplation of death. The possibility that the transfer of an insurance policy or the payment of premiums will be taxed as a gift in contemplation of death, if the donor-insured dies within three years, must not be overlooked. If the insured makes the transfer to rid himself of the incidents of ownership so as to avoid estate tax, is the transfer ipso facto a gift in contemplation of death? Does the fact that a policy will take on added value at the donor's death mean that insurance is "inherently testamentary" so that a transfer of a policy or a payment of premiums is more likely to be a gift in contemplation of death than a transfer of other property? See Garrett's Estate v. Commissioner, 180 F.2d 955, 956-957 (2d Cir. 1950), involving a life insurance trust:

We have twice recently considered under what circumstances the transfer of policies upon a settlor's life should be taken as made in contemplation of death [First Trust &

Deposit Co. v. Shaughnessy, 134 F.2d 940; Vanderlip v. Commissioner, 155 F.2d 152]; and we have said that it did not inevitably follow, even though the beneficiaries cannot receive any part of the proceeds, living the settlor, that the gift was so made. The settlor may have wished to part with control over the policies for motives which were to be satisfied while he lived; for example, he may have wished to assure himself against any temptation to use them in his business; or he may have feared possible bankruptcy, or have wished to give the beneficiaries a present certainty on which they might build while he lived. Nevertheless, although for these reasons it would go too far to say that a transfer of policies can never be other than testamentary, when the beneficiary cannot possibly profit by them, living the settlor, ordinarily such a transfer will be of that kind. A conveyance of property which the grantee can by no chance use until the grantor's death, will so commonly be in the main testamentary, that it is fair to infer that that was its preponderating, if not indeed its only, purpose, unless there be affirmative evidence of other contributory motives.

Note the similarity of this reasoning to the same court's decision in the *Reeves' Estate* case, supra page 1136. *Garrett's Estate* involved insurance policies transferred in trust. Would the Court of Appeals for the Second Circuit apply the same reasoning to policies with cash surrender or loan values that are assigned directly to the beneficiaries, so that they can either cash or borrow against the policies immediately?

A different approach to life insurance is found in Flick's Estate v. Commissioner, 166 F.2d 733, 740 (5th Cir. 1948):

Even though it be true, as the Tax Court reasoned, that all life insurance reaches its greatest value at the death of the insured, nevertheless Congress has not undertaken to convert a valid, absolute, complete gift inter vivos into a gift causa mortis or a substitute for testamentary disposition merely because the gift will have a greater value after the death of the donor.

See also Hull's Estate v. Commissioner, 325 F.2d 367 (3d Cir. 1963), involving a transfer of life insurance contracts by the decedent to his recently divorced and emotionally insecure daughter, in which the court said that the transfer was not necessarily "testamentary" because it involved insurance contracts, "particularly in a case like this where full ownership rights were transferred unconditionally, and the policies had substantial cash value."

If premiums are paid by the decedent in contemplation of death, is the amount includible in his gross estate the amount paid, the resulting increase in the value of the policy, the face amount (if the policy would have lapsed for nonpayment of premiums), or some other amount? Unless the policy is fully paid up or the premiums are paid by someone other than the decedent, note that he will perforce have paid premiums during the three-year presumptive period of §2035(b).

Life insurance trusts. With the 1954 repeal of the premiums paid test, there has been a revival of interest in the life insurance trust, a device by which income-producing property is transferred to a trustee to pay premiums on insurance on the settlor's life. (The settlor either transfers his insurance policies at the same time or the trustee takes out new policies.) Upon the settlor's death, the beneficiaries receive both the insurance proceeds and the property whose income was previously used to keep up the policies. Before 1954, the insurance proceeds would be includible in the settlor's gross estate because he had paid the premiums indirectly, and the trust corpus would also have been includible, at least during the period when Reinecke v. Northern Trust Co. was no longer followed (1948-1954, supra p. 1217), because the beneficiaries' possession or enjoyment matured at the time of his death. Under the 1954 Code, §2042 would not reach the insurance proceeds and §2037 would not reach the corpus if the settlor had no incidents of ownership in the policy and no reversionary interest in the corpus. Would §2036 be applicable to the corpus? Note that the income of the trust would continue to

be taxed to the settlor under §677(a)(3), supra page 371; the 1954 repeal of the premiums paid test for the estate tax was not accompanied by a revision of the theory that the payment of premiums on life insurance is so important an expenditure for the average taxpayer that the income of a trust that relieves him of that expense should be taxed to him even if the policies have been irrevocably assigned.

The A.L.I. proposal for life insurance. The fact that the donee of an existing policy gets the right to obtain its cash surrender value (if any), plus the fact that such an inter vivos transfer is subject to gift tax, led the draftsmen of the American Law Institute's model estate and gift tax law to propose an estate tax provision for insurance that takes a middle route between the 1942-1954 law and the 1954 Code:

> Where the decedent makes an inter vivos transfer of a life insurance policy the gift tax will apply to the transfer. Moreover, the transfer does permit the donee to obtain the present enjoyment of some part of the policy, since he can presently obtain the cash surrender value. The [1942-1954] premium payment test included under the estate tax the entire proceeds of the policy and gave a credit for any gift tax paid. It did not take account of the ability of the donee to obtain the cash surrender value during the decedent's lifetime. The [A.L.I.] Draft, however, proceeds on the premise that recognition should be given to this factor. Thus, suppose a decedent purchased and transferred a paid-up policy which cost $40,000, had a cash surrender value of $60,000 at his death, and had a face amount of $75,000. The gift tax would be imposed on $40,000. If recognition is to be given to the present interest of the decedent, then the estate tax should include only $75,000 less $40,000. Under this view, the entire policy would be subject to the transfer taxes, $40,000 to the gift tax and $35,000 to the estate tax. There would be no gift tax credit. If the policy was not fully paid up and the decedent after the transfer continued to pay the annual premiums, then the amount to be subtracted from the face amount would be the sum of the initial amount subject to the gift tax plus each annual premium, which in turn was subject to the gift tax. In fact, probably only the portion of each annual premium which was reflected in the increase in the terminal reserve value should be counted, since the balance went to the current year's insurance protection. This last limitation would be consistent with the gift tax value counted for the initial transfer. However, those that stress the view that recognition should be given to the ability of the donee to obtain the cash surrender value during the decedent's life also stress that under this approach it is more appropriate to subtract the cash surrender value just prior to the decedent's death. If the donee had acted to obtain this amount, that would have ended the matter and any difference between that value and the amounts previously subject to gift tax would go untaxed.
>
> The fact that the donee does not terminate the policy should not alter the result. Hence, in the above example, it is urged that the estate tax apply to the face amount, $75,000, less the cash surrender value of $60,000 or $15,000. This would leave $40,000 subject to the gift tax and $20,000 not subject to either tax. There would be no gift tax credit.
>
> The Draft in section X2013(b)(2)(A) takes the latter view. Basically it subjects to the estate tax the difference between the face amount and the cash surrender value immediately prior to the decedent's death. [American Law Institute, Federal Income, Estate and Gift Tax Statute 227 (Tent. Draft No. 10, 1955).]

NOEL'S ESTATE v. COMMISSIONER *

39 T.C. 466 (1962)

[Decedent was killed in a plane crash between New York International Airport and Venezuela, a few hours after applying for two policies of air travel accident

* Reversed, 332 F.2d 950 (3d Cir. 1964), on the ground that the contract was a policy of accident, rather than life, insurance.

insurance aggregating $125,000 at a booth maintained by a sales agent for the insurer at the airport. Both applications named his wife as beneficiary. The Internal Revenue Service asserted that the proceeds were includible in the decedent's gross state under §2042.]

RAUM, Judge: . . .

1. At the outset we are met by petitioner's contention that the policies in question are not "policies on the life of the decedent" within the meaning of the statute. Petitioner argues that these policies are of the type often characterized as "accident insurance" or "flight insurance," and do not possess many of the features of what is commonly referred to as "life insurance." But the question raised is no longer open.

A similar contention was rejected some 33 years ago in Leopold Ackerman, 15 B.T.A. 635, where it was held that amounts paid on account of accidental death under accident policies were amounts received "as insurance under policies taken out by the decedent upon his own life" within section 302(g) of the Revenue Act of 1924. The 1954 Code before us, although significantly different in other respects, is substantially identical in relation to the question whether the accident policies constitute "insurance . . . on the life of the decedent." While recognizing that there are distinctions between life insurance and accident insurance, *Ackerman* nevertheless held that both may be "upon the life" of the insured. "In each case the risk assumed by the insurer is the loss of the insured's life, and the payment of the insurance money is contingent upon the loss of life." 15 B.T.A. at 637. It is too late to raise the issue herein. The matter has been settled for too long a period to warrant reexamination. The statutory provisions involved are substantially identical as they relate to this question. We follow *Ackerman* here.

2. We pass therefore to consider whether the insurance proceeds are otherwise covered by section 2042(2). Our inquiry is simply whether in relation to these policies, "the decedent possessed at his death any of the incidents of ownership, exercisable either alone or in conjunction with any other person." These provisions appeared for the first time in the 1954 Code. Whether the policies were "taken out" by the decedent or whether he paid the premiums are no longer the touchstone of taxibility under the new statute. Both the House and Senate Committee reports accompanying the new legislation contained the following statement:

> This section revises existing law so that payment of premiums is no longer a factor in determining the taxability under this section of insurance proceeds. Insurance proceeds payable to the executor will continue to be taxed as under existing law. This section also requires the inclusion in the decedent's estate of insurance proceeds receivable by all other beneficiaries under a policy on the decedent's life with respect to which the decedent at death possessed any of the incidents of ownership exercisable either alone or in conjunction with any other person. . . .

H. Rept. No. 1337, 83d Cong., 2d Sess., p. A316; S. Rept. No. 1622, 83d Cong., 2d Sess., p. 472.

Did the decedent herein possess any of the incidents of ownership in the two policies before us? An examination of both policies requires an unequivocally affirmative answer. In each policy there is a paragraph entitled "Change of Beneficiary," in each of which the following appears:

> Change of Beneficiary: The right to change of beneficiary is reserved to the Insured and the consent of the beneficiary or beneficiaries shall not be requisite to surrender or as-

signment of this policy or to any change of beneficiary or beneficiaries, or to any other changes in this policy.

It is argued by petitioner that the foregoing provision in the policies was merely "boiler plate," that the decedent did not desire any such right, and that he could not have obtained the policies without such provision. Granted that all this be true, it does not advance petitioner's position. Whether or not the right to change the beneficiary was "boiler plate," it was part of the contractual relationship with each insurance company and defined a legal right of the decedent.[1] The right to change beneficiaries is one of the recognized "incidents of ownership," and accordingly the statute is applicable.

Nor is a different result required by reason of the contention that the decedent's wife paid the premiums or that the policies were "assigned" to her. To be sure, we heard testimony that she paid the premiums, but we were not entirely convinced, and since taxability under the 1954 Code does not depend upon who paid the premiums, we have not made any finding one way or the other as to this matter. To establish an assignment, the decedent's wife testified that the decedent told the clerk at the airport to give the policies to her, that they "now belonged" to her, and that "he had nothing more to do with them." We think that the delivery of the policies to her in such circumstances hardly establishes an assignment. It must be recalled that the policies contained provisions for insurance in respect of various bodily injuries short of death, and in such circumstances we are not convinced that petitioner intended to part with all rights in the policies. Rather, the testimony, even if strictly accurate, suggests merely that the decedent was indulging in a common practice of giving physical possession of the policies to the beneficiary so that, in the event of a fatal accident, she would be in a position to assert her rights under the policies. We do not find that by these oral statements, the decedent intended to make any irrevocable disposition of all his rights under the policies,[2] even assuming that he could legally do so in that manner.[3]

Petitioner makes the further contention that the right to change the beneficiary was illusory since, as a practical matter, the decedent would have been unable to exercise that right during flight. The argument proves too much. The same would be true with respect to any policy of life insurance, and the mere fact that the insured at the moment of death might be temporarily incapacitated from exercising his rights has never been thought to vitiate the effect of such retained rights. . . . Moreover, it must be remembered that the policies were not limited to accident on a one-way voyage; they covered a *round trip*, and in the normal course the right to change the beneficiary would have been meaningful prior to commencement of the return trip. Of course, decedent's wife was in possession of the policies, and to the extent that her acquiescence may have been necessary

---

1 This is not a case of erroneous provisions in the policies or the inclusion of provisions which resulted from unauthorized action by an insurance agent, which might have been corrected by reformation of the policies after they were issued. Cf. Schongalla v. Hickey, 149 F.2d 687 (C.A. 2), and National Metropolitan Bank v. United States, 87 F. Supp. 773 (Ct. Cl.), relied upon by petitioner.

2 Compare in this respect Franklin Life Insurance Company v. Falkingham, 229 F.2d 300 (C.A. 7), where the physical delivery of a policy to the insured's wife was held not to be an assignment even where such delivery was accompanied by the following declaration (p. 304): "Here, Honey, is your insurance. Take it and keep it. You are the *beneficiary*. And never let it go, regardless of what happens to me. It is yours."

3 We accordingly do not consider whether such alleged oral assignment would have been valid under the law of New York where the delivery of the policies occurred and where such assignment was alleged to have taken place. Cf. McNamee v. Griffin, 285 App. Div. 886, affirmed 309 N.Y. 864; Katzman v. Aetna Life Ins. Co., 285 App. Div. 446, reversed 309 N.Y. 197.

in order to effectuate a change of beneficiary such circumstances would not render the statute inapplicable. For, the statute speaks in terms of incidents of ownership "exercisable either alone or in conjunction with any other person." And the unrestricted words "in conjunction with any other person" include persons having an adverse beneficial interest. Helvering v. City Bank Farmers Trust Co., 296 U.S. 85; Hall v. Wheeler, 174 F. Supp. 418, 421 (D. Maine).

We hold that the proceeds of the two policies in controversy are includable in the decedent's gross estate.

NOTE

1. *Payment of premiums by beneficiary or third person.* Is there any constitutional objection to including the proceeds of an insurance policy in the insured's gross estate because he possessed one or more of the incidents of ownership, if the premiums were paid by the beneficiary or a third person? What if the decedent could exercise the incidents of ownership only with the consent of the beneficiary? Should the decedent in such cases be viewed as having a power of appointment over property created or transferred by someone else, with the tax results depending on the rules that govern powers of appointment? As will be seen (infra p. 1264), the decedent's gross estate does not include property over which he has a power of appointment unless he can exercise it in his own favor, and even then the property is excluded if he must act in conjunction with the person who created the power or with a person who has a substantial adverse interest in the property.

2. *Unwanted incidents of ownership.* With the "reformation" cases cited in footnote 1 of the opinion in *Noel's Estate,* see Piggott's Estate v. Commissioner, ¶63,061 P-H Memo T.C. (policy payable to decedent's family corporation; held, proceeds includible because decedent retained right to change beneficiary, even though retention may have been inadvertent); Hall v. Wheeler, 174 F. Supp. 418 (D. Me. 1959) (accord). See also Regs. §20.2042-1(c)(2) ("incidents of ownership" include power to change beneficiary reserved to corporation of which decedent is sole shareholder).

If the proceeds of a policy payable to the decedent's corporation are included in his gross estate under §2042, can they also be taken into account by the government in valuing the stock of the corporation includible under §2033?

3. *Life insurance as community property.* If the premiums on a life insurance policy are paid with community property, the proceeds will ordinarily constitute community property under local law, and only one half will be includible in the insured's estate under §2042 even though he reserved the incidents of ownership. See Regs. §20.2042-1-(c)(5) and (b)(2). Between 1942 and 1948, when the "economic source" rule (supra p. 1110) was in force, the proceeds of life insurance were ordinarily includible in full in the husband's estate, if the premiums were attributable to his personal earnings and he predeceased the beneficiary. With the repeal of the economic source rule in 1948, local law has controlled the gift tax, as well as estate tax, consequences of community property life insurance: thus, a gift of a community property life insurance policy to a child is treated as made one half by each spouse. See generally Thurman, Federal Estate and Gift Taxation of Community Property Life Insurance, 9 Stan. L. Rev. 239 (1957); Commissioner v. Chase Manhattan Bank, 259 F.2d 231, 244-255 (5th Cir. 1958).

When local community property law regained its primacy in this area in 1948, the common law states were compensated by the marital deduction and "split-gift" provisions discussed infra page 1286.

4. *Apportionment of estate tax against beneficiaries of life insurance.* As early as 1919, Congress provided that the beneficiaries of includible life insurance must pay their share of the federal estate tax to the executor, unless the decedent's will directs otherwise, so that the legatees and other recipients of the decedent's probate estate will not have to bear the full weight of the tax resulting from the inclusion of insurance in the gross estate. See §2206 (infra p. 1354).

FIDELITY-PHILADELPHIA TRUST CO. v. SMITH
356 U.S. 274 (1958)

MR. CHIEF JUSTICE WARREN delivered the opinion of the Court.

The question before the Court is whether the proceeds of certain insurance policies on the life of the decedent, payable to named beneficiaries and irrevocably assigned by the insured, should be included in the estate of the decedent for the purposes of the federal estate tax. The facts are not in dispute. In 1934 decedent, then aged 76, purchased a series of annuity-life insurance policy combinations. Three single-premium life insurance policies, at face value of $200,000, $100,000, and $50,000, respectively, were obtained without the requirement of a medical examination. As a condition to selling decedent each life insurance policy, the companies involved required decedent also to purchase a separate, single-premium, nonrefundable life annuity policy. The premiums for each life insurance policy and for each annuity policy were fixed at regular rates. The size of each annuity, however, was calculated so that in the event the annuitant-insured died prematurely the annuity premium, less the amount allocated to annuity payments already made, would combine with the companion life insurance premium, plus interest, to equal the amount of insurance proceeds to be paid.[1] Each annuity policy could have been purchased without the insurance policy for the same premium charged for it under the annuity-life insurance combination.

The decedent's children were primary beneficiaries of the insurance policies; the Fidelity-Philadelphia Trust Company, as trustee of a trust established by decedent, was named beneficiary of the interests of any of decedent's children who predeceased her. In the year of purchase, decedent assigned all rights and benefits under two of the life insurance policies to her children and under the other to the Fidelity-Philadelphia Trust Company as trustee. These rights and benefits included the rights to receive dividends, to change the beneficiaries, to surrender the policies, and to assign them. Dividends were received, but, as far as the record discloses, none of the other rights was exercised. A gift tax on these transfers was paid by the decedent in 1935. In 1938 decedent amended the above-mentioned trust so that it became irrevocable. As the Government concedes, the decedent retained no beneficial or reversionary interest in the trust.

The insured died in 1946. The proceeds of the three insurance policies were not included in her estate in the estate tax return. The Commissioner of Internal Revenue determined that these proceeds should have been included and assessed a deficiency accordingly. The adjusted tax was paid by the executors, and when claim for refund was denied, this action for refund followed. The District Court entered judgment for the taxpayers, but the Court of Appeals for the Third Circuit reversed. 241 F.2d 690. We granted certiorari. 354 U.S. 921.

It is conceded by the parties that the question of whether the proceeds should be included in the estate is not determinable by the federal estate tax provision dealing with life insurance proceeds. Cf. Helvering v. Le Gierse, 312 U.S. 531. To support the decision below, the Government argues that the proceeds are includible in the estate under [§2036(a), relating to transfers under which the decedent retained the income from the transferred property]. The Government contends that the annuity payments, which were retained until death, were income from property transferred by the decedent to her children through the use of the life insurance policies.

1 Of course, an additional amount is added to the premiums to compensate the insurance companies for expenses.

On the other hand, petitioners, executors of the estate, assert that the annuity payments were income from the annuity policies, which were separate property from the insurance policies, and that since decedent had assigned away the life insurance policies before death, she retained no interest in them at death.

The Government relies on Helvering v. Le Gierse, supra, where this Court also had before it the issue of the taxability of proceeds from a life insurance policy in an annuity-life insurance combination. After holding that the taxability of these proceeds was not to be determined for estate tax purposes according to the statutory provisions dealing with life insurance,[2] the Court held that the proceeds were includible in the estate under Section 302(c) of the Revenue Act of 1926 because they developed on the beneficiaries in a transfer which took "effect in possession or enjoyment at or after . . . death." 312 U.S., at 542. However, in reaching this conclusion the decision did not consider the problem in the case at bar, for in *Le Gierse* the insured had retained the rights and benefits of the insurance policy until death. The facts in the instant case on this point are fundamentally different. Prior to death, the decedent had divested herself of all interests in the insurance policies, including the possibility that the funds would return to her or her estate if the beneficiaries predeceased her. The assignees became the "owners" of the policies before her death; they had received the right to the immediate and unlimited use of the policies to the full extent of their worth. The immediate value of the policies was always substantial. In the year of assignment their total cash surrender value was over $289,000; in the year of death it was over $326,000. Under the assignment, the decedent had not become a life tenant who postpones the possession and enjoyment of the property by the remaindermen until her death.[3] . . . On the contrary, the assignees held the bundle of rights, the incidents of ownership, over property from which the decedent had totally divorced herself. . . .

Illustrative of the distinction between Helvering v. Le Gierse and the case at bar is the fact that the Government has not endeavored here to sustain the tax under the statutory provision applied in that case. Instead of the provision taxing transfers "intended to take effect in possession or enjoyment at or after" the transferor's death, the provision applied in Le Gierse, the Government relies on the provision [§2036(a)(1)] taxing transfers in which the transferor has retained until death "the right to income from" the transferred property. However, the Government's position that the annuities were income from property which the insured transferred to her children under the life insurance policies is not well taken.

To establish its contention, the Government must aggregate the premiums of

---

2 Section 302(g) of the Revenue Act of 1926 exempted from the estate proceeds up to $40,000 "receivable . . . as insurance" by persons other than the executor. The proceeds in Helvering v. Le Gierse were not considered to have arisen from "insurance" as Congress meant the word to be used because the ordinary "insurance risk" was not present. The insurance company had not undertaken to shift the risk of premature death from the insured and to distribute the risk among its other policyholders. On the contrary, by requiring a concurrent purchase of a nonrefundable annuity contract, the company had neutralized the risk at the expense of the "insured." The remaining risk, whether the annuitant would live beyond the actuarial prediction and after the insurance policy had been surrendered, was considered not an insurance risk but a risk of ordinary investment. . . .

3 Nor are the assignees like second annuitants in survivorship annuities or joint annuitants in joint and survivor annuities. The doner's and donee's annuities have a common fund as the source so that if the source of the donor's annuity is extinguished, the donee's annuity is destroyed. The entire economic enjoyment of the second annuitant must, realistically speaking, await the death of the first annuitant, and a substantial portion of the surviving joint annuitant's enjoyment is similarly postponed. Cf., e.g., Commissioner v. Wilder's Estate, 118 F.2d 281; Commissioner v. Clise, 122 F.2d 998; Mearkle's Estate v. Commissioner, 129 F.2d 386.

the annuity policies with those of the life insurance policies and establish that the annuity payments were derived as income from the entire investment. This proposition cannot be established. Admittedly, when the policies were purchased, each life insurance-annuity combination was the product of a single, integrated transaction. However, the parties neither intended that, nor acted as if, any of the transactions would have a quality of indivisibility. Regardless of the considerations prompting the insurance companies to hedge their life insurance contracts with annuities, each time an annuity-life insurance combination was written, two items of property, an annuity policy and an insurance policy, were transferred to the purchaser. The annuity policy could have been acquired separately, and the life insurance policy could have been, and was, conveyed separately. The annuities arose from personal obligations of the insurance companies which were in no way conditioned on the continued existence of the life insurance contracts. These periodic payments would have continued unimpaired and without diminution in size throughout the life of the insured even if the life insurance policies had been extinguished.[4] Quite clearly the annuity payments arose solely from the annuity policies. The use and enjoyment of the annuity policies were entirely independent of the life insurance policies. Because of this independence, the Commissioner may not, by aggregating the two types of policies into one investment, conclude that by receiving the annuities, the decedent had retained income from the life insurance contracts.

Accordingly, the judgment of the Court of Appeals is

Reversed.

MR. JUSTICE BURTON with whom MR. JUSTICE BLACK and MR. JUSTICE CLARK join, dissenting.

For the reasons stated by the court below, 241 F.2d 690, and also in Conway v. Glenn, 193 F.2d 965, and Burr v. Commissioner, 156 F.2d 871, it seems to me that, for federal estate tax purposes, this case is indistinguishable from one in which a settlor places a sum in trust under such terms that he shall receive the income from it for life, and the principal shall be payable to designate beneficiaries upon his death. As the principal, in that event, would be includable in the settlor's estate for federal estate tax purposes, so here the proceeds of the insurance policies should be included in this decedent's estate. Accordingly, I would affirm the judgment of the Court of Appeals.

NOTE

1. *Life insurance-annuity combination.* If the transferred insurance policies included an option under which the beneficiaries would be paid an annuity, could its value be included in the insured's gross estate under §2039 of the 1954 Code?

If the insured died within three years after transferring the insurance policies, would §2035 be applicable?

2. *Other problems in defining "insurance."* In Commissioner v. Treganowan, 183 F.2d 288 (2d Cir. 1950), cert. denied, 340 U.S. 853, the court had to say whether the gross estate included a "death benefit" of $20,000 paid to the decedent's widow by the "Trustees of the

---

[4] Where a decedent, not in contemplation of death, has transferred property to another in return for a promise to make periodic payments to the transferor for his lifetime, it has been held that these payments are not income from the transferred property so as to include the property in the estate of the decedent. E.g., Estate of Sarah A. Bergan, 1 T.C. 543, acq., 1943 Cum. Bull. 2; Security Trust & Savings Bank, Trustee, 11 B.T.A. 833; Seymour Johnson, 10 B.T.A. 411; Hirsh v. United States, 35 F.2d 982 (Ct. Cl. 1929); cf. Welch v. Hall, 134 F.2d 366. In these cases the promise is a personal obligation of the transferee, the obligation is usually not chargeable to the transferred property, and the size of the payments is not determined by the size of the actual income from the transferred property at the time the payments are made.

Gratuity Fund" of the New York Stock Exchange, of which the decedent had been a member:

> Since 1873 the Exchange has had a plan providing for the payment by the surviving members of a certain sum to the families of deceased members. The constitution of the Exchange sets up for this purpose a Gratuity Fund and provides that before any one may be elected to membership in the Exchange he must make a contribution to the Gratuity Fund of $15. By the constitution the member also "pledges himself to make, upon the death of a member of the Exchange, a voluntary gift to the family of each deceased member in the sum of fifteen dollars." The constitution also pledges the faith of the Exchange to pay, out of these assessments, $20,000, or so much thereof as may have been collected, to the persons named in the next section of the document. The persons there named were the widow and children of the member or issue of a deceased child or children, or if he died leaving neither widow, child, nor issue of a child, then to his legal heirs or the persons who would, under the laws of New York, take the same by reason of relationship to him had he owned the same at the time of his death. No member has at any time had the right to name, select, or designate any beneficiary or beneficiaries other than those named above, nor may the proceeds be assigned or pledged for the payment of any debt.
>
> Although the constitution provides that the beneficiaries of a deceased member are to receive the full $20,000 only if that amount is collected, practically it is certain that the full amount will be paid. Under Art. X, §5, of the constitution of the Exchange, members are subject to loss of their seats for failure to meet any assessment, including the contribution due on decease of a member. [183 F.2d at 289.]

Was the "death benefit" insurance? If so, did the decedent have any of the incidents of ownership within the meaning of §2042?

See Rev. Rul. 57-54, 1957-1 C.B. 298, regarding a contract of insurance under which the insurer agreed to pay the owner of an airplane all sums which the latter might become liable to pay by reason of liability for accident to any passenger, provided the passenger or his representatives executed a full release of all claims for damages against the insured. The Internal Revenue Service ruled that the amounts received by the personal representatives of a deceased passenger are not insurance within the meaning of §2042(1), even though paid without proof of the insured's legal liability for the passenger's death. The ruling goes on to say:

> However, if the contract between the insurance carrier and the owner of the airplane had provided that the insurance company would unconditionally pay an agreed amount to the estate of any passenger who died as a result of an accident while a passenger on the airplane, the acceptance of such amount would have constituted insurance receivable by the executor of the decedent's estate and includible in the decedent's gross estate for Federal estate tax purposes under section 2042 of the Code.

If under local law the proceeds of such a policy would serve to mitigate the damages for which the insured might be liable, is the ruling correct? What if the proceeds were payable to the insured's next of kin? Does Goodman v. Granger, supra page 1084, have any bearing on these questions?

2. *Policies Owned or Paid for by Decedent on Life of Third Person*

Section 2042 is concerned only with "policies on the life of the decedent," and has no application to policies owned or paid for by the decedent on the life of another person. If the decedent owns such a policy at the time of his death, its value will be includible in the gross estate by virtue of §2033. See Du Pont's Estate v. Commissioner, 233 F.2d 210 (3d Cir. 1956), cert. denied, 352 U.S. 878, rejecting the theory that the amount includible under §2033 is limited to the policy's cash surrender value and applying instead the gift tax valuation princi-

ples of Guggenheim v. Rasquin, supra page 1248. Even if the decedent did not own the policy at death, however, it may be includible in his gross estate because he transferred it during his lifetime in a taxable manner, as the following case demonstrates.

PYLE'S ESTATE v. COMMISSIONER

313 F.2d 328 (3d Cir. 1963)

Before STALEY, HASTIE and SMITH, Circuit Judges.

HASTIE, Circuit Judge.

The Tax Court has held that the proceeds of an insurance policy on the life of Wallace Pyle are includible in the gross estate of his widow, Ida Pyle, who has since died, as property which she transferred, reserving a life estate, within the meaning of section 2036 of the 1954 Internal Revenue Code. This ruling resulted in a determination of an estate tax deficiency. The executor of Mrs. Pyle's estate has brought the case here for review.

Mrs. Pyle applied for and obtained a $30,000 insurance policy on her husband's life, payable on his death to her. The policy granted Mrs. Pyle all the rights accorded the "insured" under the policy and she was the named beneficiary. Thus, it is clear that when the policy was issued Mrs. Pyle alone enjoyed the various incidents of ownership, including the rights of borrowing, assignment and cash surrender. She also had the right to change the beneficiary and to elect among settlement alternatives.

At Mrs. Pyle's request, during the life of her husband, a rider was attached to the policy providing that, upon the death of the insured husband, the proceeds would be retained by the company which would pay Mrs. Pyle 3% interest thereon, plus dividends, for the remainder of her life. Thereafter, the earnings, and ultimately the proceeds of the policy, were to be paid to her children. Mrs. Pyle reserved the right to revoke and change this revised method of settlement until the death of her husband, but did not do so. Upon the husband's death, the revised scheme of settlement became irrevocable.

Section 2036 of the 1954 Code requires that there shall be included in the gross estate of a decedent the value of "any interest [in property] . . . of which the decedent has at any time made a transfer . . . under which he has retained for his life . . . the right to income from, the property . . ." The Tax Court concluded that, in the circumstances outlined above, Mrs. Pyle's action during the lifetime of her husband in changing the disposition to be made of the proceeds of the life insurance policy upon maturity constituted a transfer of property under which she retained a life estate.

Challenging this conclusion, the petitioner argues that it was the death of the insured husband rather than the earlier action of Mrs. Pyle which in legal contemplation effected the transfer of property. The fact that Mrs. Pyle's election as to the disposition of proceeds at maturity was revocable until her husband died and that interests in such proceeds were contingent or inchoate until her husband's death are thought to support this contention.

We think petitioner's argument is unsound. The only transfer of property with which we are concerned is the transfer of the right to receive proceeds upon maturity. That transfer could be accomplished only through the exercise of ownership rights created by the terms of the policy and vested exclusively in Mrs. Pyle from the date of issuance until her husband's death. The fact that the husband's death was the event which caused the policy to mature and made Mrs. Pyle's election as to changes in the disposition of the proceeds irrevocable did not make him a transferor. For he had no power over the disposition of the pro-

ceeds during his lifetime and no interest in them which could pass to another at his death. An instructive analogy is provided by Goodnow v. United States, Ct. Cl., 1962, 302 F.2d 516, where a wife was held not to have been the transferor of the proceeds of a policy on her husband's life because he was the legal owner of the policy, with a vested right to elect among optional dispositions of the proceeds. As concerns the proceeds, the position of the husband there was essentially the position of the wife here.

Petitioner also points out that some of the premiums on the policy were paid by the husband. But certainly this gave him no interest in and no power over the disposition to be made of the proceeds upon his death. That is the only transfer which is relevant here. There are other cases, notably Estate of Susie C. Haggett, 1950, 14 T.C. 325, acq., 1950-2 Cum. Bull. 2, upon which petitioner relies, in which the original purchase of insurance or an annuity was a transaction constituting a transfer of property which was to become effective in some degree only upon the purchaser's death. The present case is different because it was neither the original purchase of insurance nor the payment of premiums which in fact or in law accomplished the decisive shifting of the right to proceeds. Those transactions are simply irrelevant.

Here again, Goodnow v. United States, supra, is helpful. For in that case the wife paid certain premiums on policies on her husband's life, but the husband was vested with ownership rights in the policies, including control over the disposition of proceeds. In these circumstances, the wife's payment of premiums did not make her a transferor of any property interest in the policies.

It remains only to consider whether Mrs. Pyle's election of an alternative disposition of the proceeds was such a transaction as amounts to a transfer of property with a retained life estate, within the meaning of section 2036. Mrs. Pyle was the beneficiary originally named in the policy and as such was entitled to receive the entire proceeds of the policy on her husband's death. Then, as was her right under the terms of the policy, she caused the dispositive provisions of the policy to be changed so that she would receive only interest on the proceeds during her life, with ownership and enjoyment of this property passing to other designated persons upon her death. If it had been after maturity that Mrs. Pyle gave up her absolute right to the proceeds of the policy and elected instead to receive income for life with remainder to others, the transaction would clearly have been a transfer of property within section 2036. Estate of John Joseph Tuohy, Jr., 1950, 14 T.C. 245; Estate of Mabel E. Morton, 1949, 12 T.C. 380. This case is different only in two respects. Mrs. Pyle acted while enjoyment of her right to the proceeds was still prospective and contingent upon her husband's death. Thereafter, so long as her husband lived, she could have revoked her action. While such circumstances may affect the time when in legal contemplation the transfer is accomplished, they do not make the actor any less a transferor of an interest in property. Cf. Adele F. Goodman, 1944, 4 T.C. 191, aff'd, 2d Cir., 1946, 156 F.2d 218, 166 A.L.R. 444.

NOTE

1. *Pyle's Estate.* If the trust had been created by a transfer of existing policies by the decedent's husband, and the decedent had thereafter paid the premiums (e.g., because of a fear that payment by him would constitute transfers in contemplation of death), would anything have been includible in her estate under §2036(a)? In Goodnow's Estate v. United States, 302 F.2d 516 (Ct. Cl. 1962), cited in *Pyle's Estate,* nothing was included in the wife's estate despite her payment of the premiums on policies so transferred:

> It is clear, of course, that Mrs. Goodnow transferred, either directly or indirectly, the requisite funds for the payment of premiums. She was also entitled, under the

express terms of the trust instrument, to the income from the insurance proceeds for life. The relevant inquiry here is, granting the transfer of property, whether her life estate under the trust amounts to a *retention by her* of a life estate *in the property she transferred*. It does not. She herself retained no interest in the funds she transferred. She did have a contingent life interest in the income from the insurance proceeds. This interest, however, was not retained by her in the funds she provided for the payment of premiums. It was granted to her by the express terms of the trust instrument executed by her husband. Further, there is no indication that the Goodnows agreed sub rosa that she should have a life estate in the trust income if she would make the requisite premium payments. This is particularly true in view of the fact that the trust instrument, as originally written, provided that Mrs. Goodnow's interest would terminate upon her subsequent remarriage.

In addition to the necessity of finding that Mrs. Goodnow *herself* retained a life interest in the property she transferred, it is also necessary to find, under section 2036(a)(1), that she retained the life interest in the *same* property she transferred. In other words, assuming *arguendo* that Mrs. Goodnow herself retained a life interest, the question then becomes whether she had a life interest in the premium payments she transferred. In order to justify such a conclusion, we would have to hold that, as a matter of law, the premium payments and the income from the insurance proceeds are one and the same. That this is obviously not the case may be seen from the fact that there is no necessary relationship between the premiums and the ultimate investment income. The premiums were not simply funnelled through the insurance companies and returned to Mrs. Goodnow in another form. Rather, they were received by the insurance companies as the consideration for the promises contained in the insurance contracts. If there was any funnelling process at all, it ceased when the funds were received by the companies. [302 F.2d at 520-521.]

The trust in *Goodnow's Estate* was revocable by the husband throughout the period of his wife's premium payments and until his death. Would this fact have been a more persuasive reason for reaching the court's result? If the trust in *Goodnow's Estate* had been irrevocable, would the rationale of *Pyle's Estate* have led to a different result?

Should the payment of premiums by either the insured or his wife in *Pyle's Estate* have been treated as gifts for gift tax purposes? See Commissioner v. Berger, 201 F.2d 171 (2d Cir. 1953).

Section B. Powers of Appointment: §2041

Chapters 12 and 13 of this book are concerned primarily with property that the decedent either owned when he died or transferred during his life by testamentary disposition. This section concerns itself with the taxability of property which the decedent never owned but over which he had a power of appointment. In Helvering v. Safe Deposit & Trust Co., supra page 1098, it was pointed out that the Revenue Act of 1916 said nothing about property over which the decedent had a power of appointment, and that United States v. Field, 255 U.S. 257 (1921), held that such property was not the "property" of the decedent within the meaning of the predecessor of §2033. The court also held that such property was not reached by the postponed-possession-or-enjoyment clause because that clause embraced only transfers of the decedent's own property.

The Revenue Act of 1918. The 1916 omission was remedied by the Revenue

Act of 1918, providing for the inclusion in the decedent's gross estate of "any property passing under a general power of appointment exercised by the decedent (1) by will, or (2) by deed executed in contemplation of, or intended to take effect in possession or enjoyment at or after, his death . . ." * Because the property was not subject to the estate tax under the 1918 provision unless the power was exercised, the holder of the power (the "donee") could enjoy the control of an absolute owner with impunity. Helvering v. Safe Deposit & Trust Co., supra page 1098. For example, the head of a family could transfer his entire fortune in trust, giving his son the income for life and a general power of appointment over the corpus and designating his grandchildren as takers in default. The son's estate would not be taxed on the corpus, despite his dominion and control over it, if he was content to have it go to the takers in default. Moreover, if the son's power was not a "general" power of appointment, he could exercise it without incurring estate tax liability. Thus, if in the example just given the son's power was a power to appoint only to his wife or children, the property would not be included in his estate even if he exercised the power. In Clauson v. Vaughan, 147 F.2d 84 (1st Cir. 1945), a son was given a power to appoint to anyone except his wife (from whom he was later divorced) and her family. Admitting that "a trivial or fake limitation obviously imposed for the purpose of tax evasion" might be ignored, the court held that the power in question was not "general" even though the son could appoint to anyone in the world, including himself, so long as none of the property went directly or indirectly to his first wife or her family.

Statutory reform: the 1942 legislation. In 1942, the powers of appointment provision was completely revised. The 1942 legislation made economic power or dominion, rather than actual exercise of the power, the criterion for taxing property subject to a power of appointment: the property was includible if the decedent possessed a power of appointment at the time of his death, whether he exercised it or not. In reaching unexercised powers, the 1942 legislation was analogous to §2038, which reaches property transferred by the decedent if he retains a power over it until his death. The 1942 provision also taxed property of the decedent during his life if he exercised or released a power of appointment in contemplation of death or by other testamentary disposition. In addition to abandoning the 1918-1942 dichotomy between exercised and unexercised powers, Congress in 1942 adopted a statutory definition of the term "power of appointment," instead of leaving to the courts the determination of what powers were sufficiently "general" to be subject to tax. Under the 1942 law, the term "power of appointment" meant any power to appoint exercisable by the decedent alone or in conjunction with another person unless (a) the decedent could appoint only to certain members of his family or of the donor's family or to charities, or (b) the decedent had a quasi-fiduciary power to appoint only within "a restricted class" and could not exercise the power in his own behalf. Special provision was made for powers created on or before October 21, 1942, when the new legislation was adopted. See generally Eisenstein, Powers of Appointment and Estate Taxes: II, 52 Yale L.J. 494 (1943); Alexander, Taxation of Powers of Appointment Under the Revenue Act of 1942, 56 Harv. L. Rev. 742 (1943); Griswold, Powers of

* The Revenue Act of 1932 added, after the quoted language, the following: "or (3) by deed under which he has retained for his life or any period not ascertainable without reference to his death or for any period which does not in fact end before his death (A) the possession or enjoyment of, or the right to the income from the property, or (B) the right, either alone or in conjunction with any person, to designate the persons who shall possess or enjoy the property or the income therefrom; . . ."

Appointment and the Federal Estate Tax, 52 id. 929 (1939); response by Leach, id. 961; reply by Griswold, id. 967.

The Powers of Appointment Act of 1951. The powers of appointment area was again sweepingly revised by the Powers of Appointment Act of 1951, whose rules were carried forward by §2041 of the 1954 Code. The 1951 Act not only rejected in large part the underlying philosophy of the elaborately drafted 1942 statute, but also applied the new rules retroactively for estates whose decedents died between 1942 and 1951.

The reasons for the extensive changes in 1951 were set out as follows by Guterman, The Powers of Appointment Act, 29 Taxes 631, 632 (1951):

> The 1942 amendments were designed to give recognition to the fact that broad powers of appointment, even though not within the common law definition of a general power of appointment, were substantially equivalent to ownership. The amendments came about as a result of the incongruity of treatment of this type of right of disposition of property as against other rights under the estate tax which had been swept into the category of substantial equivalent of ownership. The form of the 1942 amendments created certain burdens in dealing with powers of appointment which were not consistent with the general recognition of their importance and utility in the disposition of property. Thus, for example, the amendments granting immunity from taxation to a nonbeneficial power exercisable by a fiduciary were found to preclude in many cases, except under the most awkward limitations, the naming of executors and trustees who might be closely related to the decedent. Because such fiduciaries frequently had some kind of contingent interest in property subject to the power, there was a possibility of estate tax on the property subject to the power in the fiduciary's estate. In some cases, will draftsmen were impelled to exclude the participation of such close relative in the exercise of any power and to confine the exercise of such power to so-called disinterested trustees, that is, usually persons unrelated to the decedent. This problem was aggravated by the fact that a mere right to invade principal in favor of a beneficiary was by regulation swept within the category of a power of appointment, so that the common provision in a will of this kind created serious dangers of taxation, unless the particular beneficiary came within the limited statutory group in whose favor powers could be held without estate taxation or, as indicated above, unless the right to act in favor of the beneficiary was confined to disinterested trustees. The question of how remote an interest a fiduciary might have and still be subject to the danger of estate tax on a fiduciary power became a subject of much discussion and controversy. This area obviously called for a statutory change.
>
> Another problem that arose in connection with the 1942 amendments was the absolute subjection to taxation of any power in a case where the donee of the power created a further power. This provision was primarily designed to avoid, without violating, the provisions of certain state laws whose rules against perpetuities permitted the indefinite creation of powers of appointment from generation to generation.* In this way property

* Since the exercise of a special power of appointment was not subject to tax under the 1942 legislation, A's will could leave his property in trust for his son B, with a power in B to appoint among his issue; B could exercise his power by a testamentary provision directing the income to be paid to his son C for life, with a power in C to appoint among his issue; and this process could be repeated in successive generations. The only restriction on the possibility of indefinitely avoiding the estate tax (except on the first estate), was the rule against perpetuities; and in Delaware, by virtue of a 1933 statute, even this restriction was ineffective because the relevant period was measured from the exercise of a power, rather than from the creation of the first power. This "lawyer's Utopia" — see Leach, Powers of Appointment, 24 A.B.A.J. 807 (1938) — was invaded by the enactment in the 1951 Act of §2041(a)(3), under which the appointive property is includible in the estate of the donee of a power (even though not a "general" power) if he exercised the power by creating another power which under local law can postpone vesting or suspend ownership or alienation of the property for a period that is not related to the date the first power was created.

Query: What if local law provides that successive powers are permissible but that the property must ultimately vest not later than 5 centuries after the first power was created? — ED.

could be indefinitely taken out of subjection to estate tax. In the effort to circumvent this result, certain other types of dispositions were swept within the purview of estate taxation. For example, where the donee of a properly limited power otherwise nontaxable exercised such power by a creation of a trust and provided that the trustee should have the right in his discretion to pay over principal to the beneficiary, the otherwise tax-free power of appointment was rendered taxable, since such right to pay principal is classified as a power of appointment. This result would appear not to have been within the intended purpose of this provision of the law and created a limitation unrelated to tax avoidance and contrary to accepted methods of draftsmanship of wills and trusts.

See also Craven, Powers of Appointment Act of 1951, 65 Harv. L. Rev. 55, 61-64 (1951), which contains an interesting account of the important role played by the American Bar Association in securing enactment of the 1951 Act.

The 1951 Act dealt separately with powers created on or before October 21, 1942 — the period when the statute spoke only of "property passing under a general power of appointment exercised by the decedent" — and those created after that date.

Definition of "general power of appointment": §2041(b)(1). Before we turn to the distinction between pre- and post-1942 powers, a fundamental premise common to both should be noted: only "general powers of appointment" (as defined) are subject to tax. The 1942 statute, as just stated, proceeded on the assumption that the donee of a power should in general be taxed if he had any control over appointive property; the only exceptions were for powers to appoint only among specified close relatives of the donor or to charities and for powers that were "fiduciary" in nature. The 1951 Act adopts the fundamentally contrary premise that the property should be taxed in the donee's estate only if he had a power to appoint to himself, his estate, his creditors, or his estate's creditors.* The "or" in §2041(b)(1) has been construed as disjunctive, so that a power is "general" if the holder can appoint the property either to himself, or to his estate, or to his creditors, or to his estate's creditors. Edelman's Estate v. Commissioner, 38 T.C. 972 (1962). Any power not capable of such an exercise, however, is not a "general power of appointment" no matter how extensive the holder's control over the property, and hence it may be held, exercised, or released free of tax. What is the justification for imposing an estate tax under §2038 on trusts which the decedent had a nonbeneficial power to alter or amend (see Porter v. Commissioner, supra page 1144), while exempting property subject to identical control under a power of appointment?

A power need not be labelled as such to qualify as a general power of appointment within the meaning of §2041. Thus, in Wolf's Estate v. Commissioner, 29 T.C. 441 (1957), aff'd on other issues, 264 F.2d 82 (3d Cir. 1959), an employee's power to designate the recipient of payments under a pension agreement with his employer was treated as a power of appointment; see also Regs. §20.2041-1(b) (term includes all powers "which are in substance and effect powers of appointment regardless of the nomenclature used in creating the power and regardless of local property law connotations"). Was the decedent's power in Goodman v. Granger (supra p. 1084) a general power of appointment?

In an omitted portion of the opinion in Second National Bank of Danville v. Dallman, supra page 1101, the court held that the decedent did not possess a general power of appointment (under 1942-1951 law):

---

* But see §2041(a)(3) (exercise of a power by creating another power, where rule against perpetuities is ineffective, is taxable; supra page 1263 note).

[Section 811(f)(3) of the 1939 Code] defines a general power of appointment thus: "For the purposes of this subsection the term *general power of appointment* means a power which is exercisable in in favor of the decedent, his estate, his creditors, or the creditors of his estate . . ." . . . We think it obvious that decedent had no general power of appointment and certainly she was not endowed with power to dispose of the insurance proceeds by will. This power of appointment of which the statute and the cases speak is not something to be plucked out of the air; it must be created before it can be exercised. Decedent's power, such as it was, must be found in the insurance contract between her father and the insurance company and not elsewhere.

The salient provisions of this contract have heretofore been noted and need not be repeated in detail. It is sufficient to state that the sole and only power reposed in decedent was the right to appoint a contingent beneficiary. If this power had been exercised, which it was not, the beneficiary thus appointed would have been entitled to take the insurance proceeds. And even the exercise of this meager power was limited, that is, it was required to be made in "writing and filed at the Home Office of the Company (accompanied by the Policy for suitable endorsement) prior to or at the time this Policy shall become payable." It thus appears plain that as a prerequisite to any valid change of beneficiary, decedent was required not only to nominate but also to take the prescribed steps in order to make such nomination effective, all to be performed prior to her death. This was not done, and as a result the proceeds were payable at decedent's death not by her direction but by that of her father as contained in the contract. There is not so much as an intimation in the contract of any right possessed by decedent to dispose of the proceeds at her death, by will or otherwise. Every vestige of right or interest which decedent had in these proceeds was extinguished by death; nothing passed from her to the executor of her estate. Any exercise of power in this respect by decedent in her testamentary capacity must have been of her own creation; it certainly was not that of her father.

We have examined the many cases called to our attention and we find none where the right to make a disposition of property, testamentary or otherwise, by power of appointment was not derived from a donor. [209 F.2d at 323-324.]

The Internal Revenue Service has announced that it does not accept the *Second National Bank of Danville* case as a precedent in disposing of similar cases. Rev. Rul. 55-277, 1955-1 C.B. 456.

Certain powers that would otherwise qualify as "general" powers are exempted by paragraphs (A), (B), and (C) of §2041(b):

1. *Powers subject to an "ascertainable standard."* A power held by the decedent to consume, invade, or appropriate property for his own benefit is exempt by virtue of §2041(b)(1)(A) if exercisable only under "an ascertainable standard relating to [his] health, support or maintenance." Why this exception? Litigation under §2038 (see Jennings v. Smith, supra p. 1155) and under §2055 (infra p. 1280) foreshadows difficulty with this provision and casts doubt upon the draftsmen's belief that the 1951 provisions made "the law simple and definite enough to be understood and applied by the average lawyer." Senate Finance Committee, S. Rept. No. 382, 82d Cong., 1st Sess. 3. Will a power be exempt if the donee may exercise it "to maintain himself in the style to which he has been accustomed"? In the style to which his family background entitles him "to become accustomed"? In the style "that an annual income of $100,000 would assure"? In Barritt v. Tomlinson, 129 F. Supp. 642 (S.D. Fla. 1955), it was held that an income beneficiary's right "to use all or any part of the principal as she may see fit," was, under local law, exercisable only "to that extent which was necessary for her support," and that it was a restricted power under §2041(b)(1)(A). See also Pittsfield National Bank v. United States, 181 F. Supp. 851 (D. Mass. 1960) (ostensibly unlimited power interpreted as limited by ascertainable standard in light of local law); Snyder v. United States, 203 F. Supp. 195 (W.D. Ky. 1962) (widow's power to consume property held unrestricted by ascertainable standard);

Strite v. McGinnes, 330 F.2d 234 (3d Cir. 1964) (requirement that donee of power act in "good faith" held not to exempt it from category of "general" powers; suggestion that Regulations under §2041 rely too heavily on §2055 cases, relating to charitable deduction).

See Regs. §20.2041-1(c)(2), which serves as a guide to draftsmen who wish to create a power "limited by an ascertainable standard" under §2041(b)(1)(A) of the Code.

2. *Pre-1942 joint powers.* A power created on or before October 21, 1942, is exempt under §2041(b)(1)(B) if exercisable by the decedent only in conjunction with another person. This exemption carries forward the conclusion of a few courts that a joint power could not be "general" under the 1918-1942 law.

3. *Post-1942 joint powers.* A post-1942 joint power is exempt under §2041(b)-(1)(C) if exercisable by the decedent only in conjunction with the donor of the power or a person having a substantial adverse interest. If the person whose consent is required falls into neither of these categories but is a potential appointee, only an appropriate fraction of the property is taxed to the decedent. The concept of a substantial adverse interest — hitherto unknown to the estate tax statute — is given some definiteness by §2041(b)(1)(C)(ii), but for the most part its meaning will have to be developed by analogy from the income and gift tax law. See Camp v. Commissioner, supra page 1164.

Bearing in mind that only property subject to a general power, as just defined, is taxable in any event, we may now turn to the differences under the 1951 Act between pre- and post-1942 powers:

(1) Powers created on or before October 21, 1942.* Property subject to these powers is taxed only if the power is exercised by the decedent by will or by other testamentary disposition. Is a power "exercised" if the donee provides that the property shall go to the taker in default? If the appointees renounce their rights under the appointment? See Regs. §20.2041-1(d); Wilson v. Kraemer, 190 F.2d 341 (2d Cir. 1951), cert. denied, 342 U.S. 859; Moran's Estate v. Commissioner, 16 T.C. 814 (1951); Keating v. Mayer, 236 F.2d 478 (3d Cir. 1956); Gartland's Estate v. Commissioner, 293 F.2d 311 (7th Cir. 1961); McMullin, Estate Tax Effect of Compromised Powers of Appointment, 102 Trusts & Estates 263 (1963).

The student should contrast the divergent approaches of the 1942 and 1951 amendments to pre-1942 powers. Both recognized that some allowance should be made for powers created when the pre-1942 statute was in effect. The 1951 Act provides for a tax only if the power is exercised; the 1942 Act provided for a tax whether the decedent exercised the power or died without exercising it, but allowed a limited period (repeatedly extended by Congress) for releasing the power free of gift tax.

The 1951 Act also provides that if a general power has been appropriately "whittled down" to a non-general power by partial release during the donee's lifetime, his subsequent exercise of the power as thus reduced will not be taxable under certain conditions. §2041(a)(1), last sentence. See Nossaman, Release of Powers of Appointment, 56 Harv. L. Rev. 757 (1943); McCoid, The Non-General Power of Appointment — A Creature of the Power of Appointment Act of 1951, 7 Vand. L. Rev. 53 (1953); Freeman, If This Be Simplification — A View of Pre-1942 Powers of Appointment and the 1954 Internal Revenue Code Section 2041, 40 Cornell L. Rev. 500 (1955).

(2) Powers created after October 21, 1942. Property subject to a post-1942

* For the date of "creation" of a power of appointment, see §2041(b)(3); (date of power created by will); Regs. §20.2041-1(e) (date of power created by inter vivos instrument). The latter provision of the Regulations was promulgated in 1961, following the decision in United States v. Turner, 287 F.2d 821 (8th Cir. 1961); see also Rev. Rul. 63-74, 1963-1 C.B. 176; Berall, Powers of Appointment Created by Revocable Trust or Settlement Option, 101 Trusts & Estates 338 (1962).

power will be taxed if the power is either possessed at death or exercised or released by testamentary disposition.* To this extent, the 1951 Act accepts the premise of the 1942 amendments (and of such other portions of the Code as §2038) that the estate tax should concern itself with the decedent's control over property, whether he exercised it affirmatively or not. On the other hand, §2041-(a)(2) provides that a disclaimer or renunciation of a power shall not be deemed a release, although in point of fact a disclaimer or renunciation, like a release, may be a method of transmitting the property to those whom the donee of the power wishes to benefit. The Congressional reports on the 1951 Act state that the disclaimer or renunciation "must be made within a reasonable time after learning of the power." See Regs. §20.2041-3(d)(6).

Lapse of "general power" during donee's lifetime. Section 2041(b)(2), added by the 1951 Act, deals leniently with the lapse of certain powers of appointment, and may come to have a substantial impact upon estate planning. It sets out as a general principle that the lapse of a power of appointment shall be treated as a release of the power, but provides an exemption for the greater of $5000 per year and 5 per cent of the value of the appointive property. What are the tax consequences, under §2041(b)(2), of these facts: The decedent was the income beneficiary for life of a trust of $200,000 and he had, in addition, the right to withdraw $50,000 from the corpus, this power to lapse on his reaching the age of 50; he died at 65 without having exercised his power? What would be the tax consequences of these facts in the absence of §2041(b)(2)?

The area in which §2041(b)(2) will be most important is the trust under which a widow or child is the income beneficiary with a power to withdraw, say, $5000 per year. What will be included in the gross estate of the widow or child? What would the result have been if §2041(b)(2) had not been enacted? The purpose of this provision is to permit flexibility to be introduced into trust instruments, without tax cost, where the settlor of a trust is afraid that the income alone may prove to be insufficient for the income beneficiary needs. See page 1105 supra. Query: Can this tax-free flexibility be reconciled with the Act's policy of otherwise treating the donee of a general power of appointment as an absolute owner? If §2041(b)(2) were repealed, would a settlor be able to achieve about the same result by giving to the income beneficiary a power of appointment restricted under §2041(b)(1)(A)?

Restricted powers where donee is taken in default. As stated earlier, §2041(b)-(1) defines the term "general power of appointment" to mean "a power which is exercisable in favor of the decedent, his estate, his creditors, or the creditors of his estate." Suppose the power is exercisable only in favor of a restricted class, such as the donee's nieces and nephews, but in default of appointment, the property will go to the donee's estate. With such a power, the donee has as much freedom as though he were expressly empowered to appoint to his estate. Is it a "general power of appointment"? If he dies without exercising the power, can the property be included in his gross estate under §2033, i.e., does he have an "interest therein . . . at the time of his death"? If he exercises the power in favor of his nieces and nephews in contemplation of death, has he made a "transfer" of an "interest" in property under §2035(a)? In this connection, consider again the *Safe Deposit & Trust Co.* case, supra page 1098.

What if the power is exercisable in favor of the donee's wife or minor chil-

---

* The Internal Revenue Service has ruled that a post-1942 power is taxable under §2041(a)(2) even though the holder was unable to exercise it, by reason of mental incapacity, from the time the power was created until his death. It was apparently assumed that the power could have been exercised, on behalf of the holder, by the appropriate local court. Rev. Rul. 55-518, 1955-2 C.B. 384; see also Edelman's Estate v. Commissioner, 38 T.C. 972, 977 (1962) (accord, where donee of power was not an adjudicated incompetent).

dren? See Regs. §20.2041-1(c) (a power exercisable "for the purpose of discharging a legal obligation of the decedent or for his pecuniary benefit is considered a power of appointment exercisable in favor of the decedent or his creditors"); cf. *Dwight's Estate*, supra page 1188.

A related problem is presented by the so-called "reverse power." Suppose Smith is the remainderman of a trust created by his father, and that he is empowered to advance principal to the life beneficiary. If he refrains from exercising his power, his estate will include either the entire corpus or his remainder interest, depending upon whether he survives or predeceases the income beneficiary. Does this mean that his power to advance principal to the income beneficiary is, in substance, a general power of appointment because by refraining from exercising it he may acquire the entire corpus? See Johnson, Powers of Appointment, 29 Taxes 965, 977-978 (1951).

Insurance on decedent's life: §2041 vs. §2042. Under §2042(2), the decedent's gross estate includes the proceeds of life insurance on his life if he possessed at his death any of the incidents of ownership, even though he paid none of the premiums (supra p. 1247). If his wife paid the premiums and he had the power to change the beneficiary with her consent, §2042(2) requires the proceeds to be included in his estate — but note that if he had a similar power over some other type of property, it would not be a "general power of appointment" by virtue of §2041(b)(1)(C)(i) (power exercisable only in conjunction with creator of the power). Is there a similar disparity between §2042(2) and §2041 as respects a power to appoint within a class of persons? Such a power is not a general power of appointment if the holder cannot appoint to himself, his estate, his creditors, or the creditors of his estate. Does it constitute an "incident of ownership" within the meaning of §2042(2)? Is there any reason to tax the insured who did not pay for an insurance policy because he possesses an incident of ownership if a comparable power of appointment would not have resulted in an estate tax? Can the "incidents of ownership" rule of §2042(2) be avoided by placing the policies in trust, designating the trustee as the beneficiary, and giving the insured a non-general power to appoint the corpus of the trust? See Estate of Karagheusian v. Commissioner, 233 F.2d 197 (2d Cir. 1956) (decedent's power to alter life insurance trust created by his wife treated as an incident of ownership in insurance policy held by trust to avoid sanctioning tax avoidance "by means of insubstantial alterations in the forms of ownership").

Allocation of tax burden to appointive property: §2207. Because the 1942 legislation imposed an estate tax on some powers of appointment that the decedent could not have exercised for his own benefit, a provision was enacted to protect the natural objects of his bounty by allocating an appropriate portion of the estate tax to the appointive property. Such a provision became less necessary with the 1951 revision; since appointive property is now includible only if the decedent could have appointed to himself, his creditors, his estate, or his estate's creditors, the holder of a taxable power can protect his family by an inter vivos or testamentary exercise of the power to the extent necessary to exonerate his own property from the burden of the tax. Even so, the provision has been carried forward as §2207 of the 1954 Code. It is similar to §2206, allocating the estate tax burden caused by the proceeds of life insurance to the beneficiaries, supra page 1254.

Income tax basis. Before 1954, property subject to a power of appointment took on a new income tax basis on the death of the donee of the power if it passed under a general power exercised by will, under what is now §1014(b)(4). Section 1014(b)(9) of the 1954 Code, however, extended the principle of a stepped-up (or stepped-down) basis to any property acquired "from the decedent by rea-

son of death, form of ownership, or other conditions (including property acquired through the exercise or non-exercise of a power of appointment)" if the property was includible in the donee's estate. Would this cover property acquired when the decedent-donee released his power?

Powers of appointment and the gift tax. Before 1942, there was no specific mention of powers of appointment in the gift tax provisions of the Code. A leading case held that the exercise of a power of appointment did not constitute a taxable gift by the donee, primarily because the Supreme Court had held in the *Field* case, supra page 1261, that appointive property was not includible in the donee's gross estate in the absence of specific legislation. Commissioner v. Walston, 168 F.2d 211 (4th Cir. 1948). But other cases pointed in the opposite direction and the Regulations adhered to the approach of these cases. Cerf v. Commissioner, 141 F.2d 564 (3d Cir. 1944); Richardson v. Commissioner, 151 F.2d 102 (2d Cir. 1945), cert. denied, 326 U.S. 796; Regs. 108 §86.2(b)(7).

In 1942, the gift tax statute was amended to provide explicitly: "An exercise or release of a power of appointment shall be deemed a transfer of property by the individual possessing such power." The new statute went on to provide that the term "power of appointment" did not include powers of the type immune from estate tax under the 1942 law, i.e., powers to appoint only within the donor's or donee's family or to charities, and so-called fiduciary powers. Just as property subject to such limited powers was not part of the donee's gross estate for the estate tax, so it could be routed during the donee's lifetime to an appointee (by exercise of the power) or to a taker in default (by release of the power) without payment of gift tax by the donee.

Quite naturally, the 1951 Powers of Appointment Act swept aside the 1942 provisions governing the gift tax liability of the donee of a power of appointment and substituted principles (embodied without change in §2514 of the 1954 Code) in harmony with the new estate tax provisions. The gift tax now applies, like the estate tax, only to a "general power of appointment," and this term is defined in the same way for both taxes. Next, §2514(b) provides that the exercise or release of a post-1942 power "shall be deemed a transfer of property by the individual possessing such power." (Special provision is made by §2514(a) for pre-1942 powers.) Finally, §2514(e) brings the gift tax into harmony with the estate tax with respect to lapsed powers.

"Reverse powers" and the gift tax. If the donee of a power may appoint only to his nieces and nephews but his estate is the taker in default, does he make a gift by exercising the power in favor of a niece or nephew? We considered earlier, supra page 1268, the question whether the power is a "general power of appointment." The "reverse power" also poses gift tax questions that are parallel to the estate tax questions already raised. Does the income beneficiary of a trust who can advance principal to the remainderman make a gift when he exercises his power? If so, how is the amount to be measured? What of a remainderman who exercises a power to advance principal to the life beneficiary? See Self v. United States, 142 F. Supp. 939 (Ct. Cl. 1956).

Creation of power of appointment: A taxable gift? The statute does not state whether the *creation* of a power of appointment is a taxable gift. If A creates in B a power to appoint to himself, or if he gives B a power to appoint to others and names B as the taker in default, has A made a gift? If A confers on B the power to appoint to C or D, naming X as the taker in default, has A made a taxable gift to B, C, D, and/or X? Is an exclusion allowed under §2503(b)?

Mention has already been made (supra p. 1263n) of §2041(a)(3), under which a non-general power of appointment is subject to the estate tax if it is exercised to create another power in a state in which the rule against perpetuities permits the

indefinite suspension of ownership by the creation of successive powers. In keeping with the special estate tax rule for such powers, §2514(d) provides that the inter vivos exercise of a power by the creation of another power in such a state is to be treated as a gift of the appointive property.

Renunciations, disclaimers, and releases. If A is a legatee under the will of B and renounces his legacy, does he thereby make a gift for gift tax purposes to the residuary legatee or other person who takes the renounced property? In a leading case, it was held that a renunciation by a legatee, in contemplation of death, of an interest in his wife's estate was not a "transfer of property" for estate tax purposes:

> The decedent never owned nor had control of the property as donee. All that he had was a right to accept. Coupled with this right was an equal right to reject. Either could be exercised so long as the estate was in administration. He did reject. The government had no fixed prior right such as a precedent judgment creditor might have had. . . . What it did was to collect a tax, not upon the transfer of an interest in property, but upon the exercise of a right to refuse a gift of property. This we think it had no right to do. [Brown v. Routzahn, 63 F.2d 914, 917 (6th Cir. 1933), cert. denied, 290 U.S. 641.]

The case has often been cited, but other courts have ordinarily applied it only if the taxpayer's renunciation was unequivocal; if there was a partial acceptance of the gift, renunciation of the balance may be treated as a transfer for gift or estate tax purposes. Cerf v. Commissoner, 141 F.2d 564 (3d Cir. 1944); Morton's Estate v. Commissioner, 12 T.C. 380 (1949); see also Fuller v. Commissioner, 37 T.C. 147 (1961) (renunciation after long delay treated as taxable gift). It has also been held that an intestate successor's renunciation is a gift if under state law title vested in him immediately on the intestate's death. Hardenbergh v. Commissioner, 198 F.2d 63 (8th Cir. 1942), cert. denied, 344 U.S. 836. In the *Bergan* case, supra page 1182, it was argued that Miss Bergan had "renounced" her interest in Mrs. Johnson's estate (except for the $50,000 of bonds) within the meaning of Brown v. Routzahn, but the court held that she had transferred this share as consideration for Mrs. Gogin's promise to support her.

Should all renunciations be treated like exercises of a general power of appointment? Note that §2514(b) provides that a renunciation or disclaimer of a power of appointment shall not be treated as a release, i.e., it is not a taxable gift under §2514. See Regs. §25.2514-3(c)(5). The Exemption, Deductions, and Credits

Section A. The $60,000 Exemption: §2052

The "gross estate" comprises all of the property described in §§2031-2042, which are examined in Chapters 12-14. The "taxable estate," to which the tax rates set out in §2001 are applied, is defined by §2051 as the "gross estate" less the $60,000 exemption of §2052 and the deductions of §§2053-2056. One other definition is important: the "marital deduction" of §2056 may not exceed 50 per cent of the value of the "adjusted gross estate," a term defined by §2056(c)(2)(A) as the "gross estate" less the deductions permitted by §§2053 and 2054. For estates containing community property, see §2056(c)(2)(B).

An estate tax return must be filed whenever the gross estate of a citizen or resident alien exceeds $60,000, even though no tax is due because of the exemption and deductions. §6018(a)(1). During the calendar year 1961, about 65,000 estate tax returns were filed, of which 19,000 showed no tax due. In the same year, according to the World Almanac, there were 1,700,000 deaths in the United States. Although these figures are not entirely parallel, because the estate tax return is not due until 15 months after death, they do demonstrate that only a small fraction of the population is sufficiently affluent to be concerned about the federal estate tax. The taxable returns filed in 1961 reported aggregate gross estates of about $12.7 billion, aggregate exemptions of about $2.7 billion, and tax liability of about $1.6 billion. The non-taxable returns reported aggregate gross estates of about $1.9 billion.

Before 1954, the estate tax structure consisted of a "basic" and an "additional" estate tax. An exemption of $100,000 was allowed in computing the basic tax, but the exemption for the additional estate tax was $60,000. The only function of the separate computations was to serve as a ceiling on the credit for state death taxes, which was limited, for historical reasons set out infra pages 1325-1326, to 80 per cent of the federal basic tax. The computation of the estate tax was simplified in 1954 by combining the two taxes in §2001, without any change in the total tax due (except for some nonresident aliens). Because some state laws refer to the federal "basic" estate tax, however, §2011(d) provides a method of computing it.

Section B. Expenses, Indebtedness, Taxes: §2053

Section 2053(a) authorizes the deduction of such amounts for funeral expenses, administration expenses, claims against the estate, and unpaid mortgages or other debts in respect of includible property that are allowable by the law of the jurisdiction in which the estate is being administered. (For the proper treatment of community debts in a community property state, see United States v. Stapf, 375 U.S. 118 (1963), holding that only one half of such debts may be deducted from the decedent's half of the community property, even if his will provides for their payment in full.) The deductions may not exceed the value of the property subject to claims under local law, except to the extent that the payments have in

fact been made before the estate tax return is due. See Regs. §20.2053-1(c), Examples (1) and (2). Section 2053(b) supplements §2053(a) by permitting the deduction of expenses incurred in administering property not subject to claims but includible in the gross estate (e.g., trustee's commissions and attorney's fees paid on the termination of an inter vivos trust whose corpus was includible in the gross estate under §2036). To be deductible, §2053(b) expenses must be of a type that would have been deductible under §2053(a) if the property were subject to claims, and they must have been paid before the time for assessment of the estate tax has expired. See Regs. §20.2053-8; Mary E. Burrow Trust v. Commissioner, 39 T.C. 1080 (1963).

Although §2053(a) explicitly (and §2053(b) implicitly) requires claims and expenses for which a deduction is taken to be "allowable" under local law, allowance by the local probate court is not necessary; conversely, it will not ipso facto insure their deductibility. In general, however, a local decree will be accepted, even if rendered by consent "provided the consent was a bona fide recognition of the validity of the claim (and not a mere cloak for a gift) and was accepted by the court as satisfactory evidence upon the merits." Regs. §20.2053-1(b)(2); see also page 1080 supra.

1. *Funeral Expenses*

It has been held that an amount set aside by the decedent's will for perpetual maintenance of a family mausoleum in which she was interred is deductible under §2053(a)(1) if it is allowable as a funeral expense under state law. Estate of Cardeza v. Commissioner, 5 T.C. 202, 220-221 (1945), aff'd, 173 F.2d 19 (3d Cir. 1949); see Igleheart v. Commissioner, 77 F.2d 704, 712-713 (5th Cir. 1935), disallowing a deduction where it was not shown that the amount was allowable under state law. If the decedent makes a bequest for acquisition or maintenance of a family cemetery plot in an amount exceeding what would be allowable under state law in the absence of a bequest, can the excess be treated as an "expense" under §2053(a)(1)?

2. *Administration Expenses*

At the time the estate tax return is filed, the amount of the executor's and attorney's commissions will often be as yet undetermined. The Regulations provide that the deduction may be based upon an estimate of the amount to be paid. Regs. §20.2053-3(b) and (c).

If suit is brought for a refund of federal estate tax, the judgment will bar a later suit for a refund based on the expenses of litigating the first suit. To protect itself, the estate can follow the procedure prescribed by Regs. §20.2053-3(c)(2), which came into the Regulations in 1947. See Bohnen v. Harrison, 232 F.2d 406 (7th Cir. 1956); Frank v. Granger, 145 F. Supp. 370 (W.D. Pa. 1956); and, for historical background, First Nat. Bank of Atlanta v. Allen, 100 F. Supp. 133 (M.D. Ga. 1951).

The Regulations provide that a bequest to the executor in lieu of commissions may not be deducted. §20.2053-3(b). See page 144 supra for the income tax status of such an arrangement, so far as the executor is concerned.

Some administration expenses may also be "ordinary and necessary expenses" incurred in carrying on a trade or business or in producing or collecting income (§§162 and 212), thus qualifying as deductions in computing the estate's *income* tax liability. The executor may not deduct such expenses in the income tax

return unless he waives the right to deduct them in the estate tax return. §642(g). Before 1942, when this subsection was enacted, the possibility existed of deducting some expenses both on the estate tax return as administration expenses and on the estate's income tax return as ordinary and necessary business expenses. See Adams v. Commissioner, 110 F.2d 578 (8th Cir. 1940). Were it not for the enactment of §642(g), this possibility would have been greatly enlarged after 1942 because of the enactment in that year of §212. Section 642(g) does not, however, prevent so-called "deductions in respect of a decedent" from being deducted under §2053 in computing the taxable estate even though they are also deducted under §691(b)(1) on the income tax return of the estate or of the heir who pays them. An example is a §162 or §212 expense that accrued during the decedent's life, but was not deducted by him because he reported his income on the cash receipts and disbursements basis and had not paid the item before his death. The opprobrious connotation of "double deduction" is not applicable to these items, however, because if they had been paid by the decedent during his lifetime they would have reduced both his taxable income and his taxable estate; and allowing them to be deducted under both §2053 and §691(b)(1) produces substantially the same result. See also Mary E. Burrow Trust v. Commissioner, 39 T.C. 1080, 1090 (1963) (deduction of same item in computing taxable income of trust and taxable estate).

The election to deduct expenses on the estate's income tax return rather than on its estate tax return may have important substantive consequences for the decedent's heirs, especially if the amount left to the surviving spouse is fixed by reference to the "adjusted gross estate" as determined for federal estate tax purposes. See Matter of Inman, 22 Misc. 2d 573 (N.Y. 1959); see also Empire Trust Co. v. United States, 226 F. Supp. 623 (S.D.N.Y. 1963); Halbach, Post-Mortem Estate Planning, 1963 U. of Ill. L.F. 212, 246-251; Miller, Check List for Estate Tax Deductions, 102 Trusts & Estates 859 (1963); Holzman, Estate Administration Planning, 39 Taxes 578 (1961).

3. *Claims, Mortgages, and Indebtedness*

COMMISSIONER v. WRAGG

141 F.2d 638 (1st Cir. 1944)

Before MAHONEY and WOODBURY, Circuit Judges, and PETERS, District Judge.

WOODBURY, Circuit Judge.

This is a petition by the Commissioner of Internal Revenue for review of a decision of the Tax Court of the United States holding that there is no deficiency in the federal estate tax paid by the respondent on the Estate of one George H. Lowe, Sr. The statute involved is [§2053(a)(3)].

The Tax Court found the following facts. Between 1883 and 1910 the decedent devoted his time exclusively to the business of Carter, Rice and Co., Inc., and Nashua Gummed and Coated Paper Co., both successful corporations, and during that time the decedent acquired substantial amounts of stock in both of them. This stock was closely held, unlisted and without a ready market.

About 1910 the decedent and his son, George H. Lowe, Jr., organized the Weymouth Art Leather Company, a corporation which engaged in the business of manufacturing a leather substitute by painting cloth. The decedent furnished the original capital for this corporation and served as an officer and a director of it until 1932. He placed his son in charge of its affairs.

During the period from 1917 or 1918 to 1925 the decedent pledged all of his shares of stock in Carter, Rice and Co., Inc., and Nashua Gummed and Coated Paper Co. as collateral to secure various promissory notes for money borrowed from individuals and banking institutions by George H. Lowe, Jr. Some of these notes the decedent also either signed as co-maker or endorsed. A substantial part of the money borrowed by the son and for which the decedent pledged his stocks was used to finance Weymouth. Weymouth was solvent when the loans were negotiated and both the decedent and his son expected that the loans would be repaid.

By 1932 the decedent's health had begun to fail and the various holders of the notes and obligations which had been created by George H. Lowe, Jr. and the decedent were pressing for payment and threatening to sell the shares owned and deposited by the decedent as collateral. In this state of affairs on February 25, 1932, Samuel H. Wragg, the respondent, was appointed conservator of the decedent's estate by the Norfolk County Probate Court. Immediately upon his appointment the conservator brought a petition in the above Probate Court seeking to restrain the various persons and institutions holding collateral notes from selling the collateral, and after hearing on the merits, that court enjoined all parties holding such securities from selling them. When the conservator took office the total obligations for which the decedent had pledged his shares in Carter, Rice and Co., Inc., and Nashua Gummed and Coated Paper Company amounted to approximately $233,000 and the pledged shares had a book value of about double that amount.

For a number of years prior to 1932 the decedent had also given direct financial assistance to his son, some of which the son had from time to time repaid. In 1934, the conservator brought an action in the Municipal Court of the City of Boston against the son for the money advanced directly to him and recovered a judgment therein in the amount of two hundred and forty-five thousand dollars. Execution issued on November 3, 1934, but it does not appear that it was ever levied upon or that anything was ever paid in satisfaction thereof.

During the course of his duties as conservator the respondent refinanced certain of the loans secured by pledge of the decedent's stocks in order to save the equity in those stocks for the estate, it being necessary for him to secure title to the pledged stocks in order to sell them in one block.

George H. Lowe, Sr., died, testate, a resident of Needham, Massachusetts, on February 11, 1937, and his former conservator was appointed and duly qualified as administrator c.t.a.d.b.n. of his estate. In his estate tax return he deducted the amounts due at the date of death, that being the date selected for valuing the estate, on the notes endorsed by his decedent or signed by him as co-maker, or secured by collateral owned by him, and he also deducted the amounts due on notes signed by himself as conservator, the proceeds of which had been used to discharge similar notes. The question is whether these deductions are authorized.

The Commissioner does not question the sufficiency of the evidence to support the Tax Court's finding that "There can be no question as to the bona fides of the several transactions here questioned. Nor is there any doubt as to the obligations being contracted for adequate and full consideration in money or money's worth. All were normal business deals." * Neither does he again urge, as he has so many times in the past, always in vain, that the deductions taken cannot be

* See §2053(c)(1)(A), providing that if a claim against the estate is "founded on a promise or agreement," it may be deducted only if "contracted bona fide and for an adequate and full consideration in money or money's worth," subject to an exception for certain charitable pledges. — ED.

allowed because the consideration for the claims against the estate did not flow to the decedent. . . . His position here, to quote from his brief, is that "The claim and the indebtedness in respect to the property of the decedent were on account of obligations in respect to which the son was primarily liable. The estate, therefore, had a right to indemnity or of contribution against the son. In allowing the deductions here in controversy, the Tax Court erred in ignoring this right of indemnity or contribution from the son. The record does not show nor did the Tax Court find that the son was insolvent or unable to reimburse the estate for the sums paid in satisfaction of the son's indebtedness." That is to say, the Commissioner contends that a bona fide business obligation of a secondary nature undertaken for money or money's worth cannot be deducted for estate tax purposes unless the value of the decedent's right over against the primary obligor is included in computing the gross estate, and since there was no evidence presented to, or finding made by, the Tax Court that the decedent's right over against his son was valueless, the deduction ought not to be allowed because the person claiming a deduction has the burden of proving that he is entitled to it.

The statute makes no specific mention of rights of reimbursement, contribution or indemnity, but it does provide for inclusion in the gross estates of decedents of the value at the time of death of "all property, real or personal, tangible or intangible, wherever situated" [§2031(a)], and these words are clearly broad enough to include such rights. The courts in the cases to be cited hereafter have, at least tacitly, so construed them. The crucial question in cases of this sort is what such a right is worth. If it is worth one hundred cents on the dollar, an estate will not be reduced by a secondary obligation of the decedent, but if it is worth nothing, a secondary obligation will be as effective as a primary one to reduce the net value of an estate. It is upon this truism that the courts and the Board of Tax Appeals appear, if inarticulately, to have proceeded in the past.

Thus when it has appeared that the decedent's right over against the primary obligor was worth its face value, no deduction has been allowed for a secondary liability . . . ; but when it has appeared that the right over was valueless a deduction for it has been allowed. . . . And, when it has appeared that the right was worth something but not its face value a deduction has been allowed to the extent of the amount which actually had to be paid and could not be recovered from the primary obligor by the estate. . . . In view of these cases . . . it does not seem to us that the Tax Court in the case at bar would have allowed the deduction unless it had come to the conclusion that the right of the estate over against the primary obligor, the decedent's son, was valueless. To be sure it made no such finding categorically, but nevertheless we feel that such a finding is implicit in the factual background of the case and that it must have been assumed by the Tax Court that the estate would ultimately have to bear the loss or else it would not have reached the result which it did. The facts upon which we base our conclusion are that at various times the creditors had threatened to sell the collateral pledged to secure the notes; that upon some occasions actions were instituted by creditors against the decedent's estate on the notes, and that the execution on the judgment obtained by the conservator against the son was never levied upon or satisfied although the conservator as a fiduciary was under a legal duty to collect on his judgment, regardless of the family relationship involved, if he could. It seems to us that the creditors would not have taken the steps which they did if the son had been solvent, and that the conservator, if possible, would have collected on his judgment against the son. In the absence of evidence we cannot assume that he neglected to do so in breach of his fiduciary duties. Thus we think that the Tax Court must have concluded, but merely failed to state, that the right of the estate over against the son was value-

less, and, this being so, we see no point in remanding the case for a definite finding to that effect.

The decision of the Tax Court of the United States is affirmed.

NOTE

1. *Right of subrogation.* In DuVal's Estate v. Commissioner, 152 F.2d 103 (9th Cir. 1945), cert. denied, 328 U.S. 838 (1946), where it was argued that the estate's right of subrogation could not be included under §2031 in determining the value of the gross estate because the right would arise only on payment and hence did not exist "at the time of [the decedent's] death" within the meaning of §2031, the court responded:

> Whether the rights over be called a right of subrogation or a right of contribution, or a right to a right of subrogation or contribution, decedent at her death had property rights of value, and the right upon payment [of the principal debt] to acquire the right of subrogation is the property right which must be included in the gross estate. [152 F.2d at 104.]

2. *Consideration that did not augment decedent's estate.* As to the deductibility of a claim founded on a promise or agreement if the consideration "did not flow to the decedent," compare the view of the court in the *Wragg* case with the statement of the Supreme Court in Commissioner v. Wemyss, supra page 1025: "If we are to isolate as an independently reviewable question of law the view of the Tax Court that money consideration must benefit the donor to relieve a transfer by him from being a gift, we think the Tax Court was correct." In Latty v. Commissioner, 62 F.2d 952, 954 (6th Cir. 1933), construing the words "consideration in money or money's worth" in the predecessor of §2053(c)(1)(A), the court said:

> We think that ordinarily these words must be construed to evidence an intent upon the part of Congress to permit the deduction of claims only to the extent that such claims were contracted for a consideration which at the time either augmented the estate of the decedent, granted to him some right or privilege he did not possess before, or operated to discharge a then existing claim, as for breach of contract or personal injury.

Would the claims against the estate in the *Wragg* case have been deductible if the son had been insolvent at the time the decedent endorsed the notes, so that the endorsements were an indirect method of making gifts to the son? See Woody's Estate v. Commissioner, 36 T.C. 900 (1961) (obligation incurred to make a gift is deductible under §2053).

3. *Non-contractual claims.* Since 1932, §2053(c)(1)(A) has required claims against the estate to be supported by full consideration in money or money's worth only if "founded on a promise or agreement." The pre-1932 requirement of full consideration applied to all claims, and thus might have been construed to bar the deduction of a tort claim (e.g., in a personal injury case against the decedent) or a liability imposed by law (e.g., the decedent's unpaid income taxes) on the ground that the claim was not supported by full consideration in money or money's worth.

Note the exception in §2053(c)(1)(A) for charitable pledges; even though the charity's claim is "founded on a promise or agreement," it need not have been contracted for full consideration in money or money's worth. This exemption was enacted in 1942, to overrule Taft v. Commissioner, 304 U.S. 351 (1938), holding that the predecessor of §2053(c)(1)(A) barred a deduction for a claim against the estate arising out of a charitable pledge by the decedent during his lifetime.

GOWETZ v. COMMISSIONER

320 F.2d 874 (1st Cir. 1963)

Before WOODBURY, Chief Judge, and HARTIGAN and ALDRICH, Circuit Judges.

ALDRICH, Circuit Judge.

The question raised in this petition to review a decision of the Tax Court is what deduction may be made from the gross estate of a Massachusetts decedent because of an obligation to pay alimony to his former wife. Prior to a divorce the decedent had entered into a separation agreement to pay $500 a month to his wife for life as long as she remained unmarried. It was not expressly stated that the obligation would continue after the husband's death. The ensuing divorce decree did not in terms incorporate the agreement, but notice was taken thereof and no independent financial provision was made for the wife.[1] In the estate tax return the executors, present petitioners, claimed a deduction in a sizable amount because of the future requirements of the agreement. It is conceded that their figure was supported by accepted actuarial tables as being the fair discounted value, as of the date of decedent's death, of an obligation to pay $500 a month to a woman of the former wife's then age for life or until she remarried. At the same time, vis-a-vis the former wife, they denied all liability, and resisted suit in the state court. No Massachusetts case had passed on the precise question and we accept the executors' assertion that they believed in good faith that there was a reasonable possibility that their defense would be successful. During the pendency of that suit the wife remarried. This, of course, terminated any future rights, and in effect reduced the estate's maximum obligation for monthly payments to a much lower figure than the one indicated by the actuarial tables. Thereafter the executors lost the state court suit, Taylor v. Gowetz, 1959, 339 Mass. 294. The Commissioner limited the deduction to the amount actually payable, and the Tax Court sustained that determination.

Expressly rejecting the broad arguments the government now urges,[2] the Tax Court stated that the executors' total asserted deduction would have been proper, citing Commissioner v. Maresi, 2 Cir., 1946, 156 F.2d 929, had it not been for the fact that the estate's liability was contested. This uncertainty is regarded as fatal. In its opinion the court distinguished uncontested claims with respect to which the amount eventually payable could be approximated by the use of actuarial tables, and "disputed," "contingent" and "potential" claims not so measurable. It described the present claim prior to the final state court decision as "contingent," but rather than saying that initially the deduction was not allowable because it had not been determined that anything would ever be paid, it concluded that until the state court had acted "[t]he value of the claim for deduction purposes was not reasonably ascertainable."

Although we agree with its result we do not altogether adopt the court's reasoning. We question whether, viewing the claim as of the date of death, its value as a claim was necessarily unascertainable. Even a disputed claim may have a value, to which lawyers who settle cases every day may well testify, fully as measurable as the possible future amounts that may eventually accrue on an uncontested claim. If the court was to rest its decision on ascertainable value we think it would have been more appropriate to point out that the executors failed to ascertain it for the reason that in taking a figure based on actuarial tables only, with no allowance for the fact that liability was contested, they made a totally unrealistic appraisal. Obviously a disputed claim is of less value than one which is uncontested.

---

1 The government has not contended that the claim is founded on an agreement and to any extent lacked consideration in money or money's worth. See 1954 I.R.C. §§2043(b), 2053(e)(1)(A); Rev. Rul. 60-160, 1960-1 Cum. Bull. 374, modifying E.T. 19, 1946-2 Cum. Bull. 166; cf. Harris v. Commissioner, 1950, 340 U.S. 106; McMurtry v. Commissioner, 1 Cir., 1953, 203 F.2d 659. We are not to be taken as ruling that this was a necessary concession.

2 The government's general approach to unliquidated claims seems andabatarian. We do not find it necessary to pass on it.

The executors are on the horns of a dilemma. If they are correct in saying that Ithaca Trust Co. v. United States, 1929, 279 U.S. 151, requires the claim to be valued as of the date of death irrespective of future events,[3] they have failed to prove its then value. If they wish to relax that principle to the extent of looking to subsequent events to eliminate the question of liability, they cannot object to the government's looking at least that far into the future to remove the other uncertainty.

We need decide no more. At the same time we must observe that the executors' basic position appears in conflict with the statutory scheme, which has frequently been construed to encompass after events rather than to require valuation as of the date of death. See, e.g., Commissioner v. State Street Trust Co., 1 Cir., 1942, 128 F.2d 618; Commissioner v. Shively's Estate, 2 Cir., 1960, 276 F.2d 372; Jacobs v. Commissioner, 8 Cir., 1929, 34 F.2d 233, Jacobs v. Lucas, cert. den., 280 U.S. 603; Estate of William P. Metcalf, 1946, 7 T.C. 153, aff'd without opinion, 6 Cir., May 5, 1947. How far into the future it may be appropriate to go we need not determine.

Judgment will be entered affirming the decision of the Tax Court.

NOTE

1. *Events after death affecting amount "allowable."* In *Shivley's Estate,* described by the court as construing "the statutory scheme . . . to encompass after events rather than to require valuation as of the date of death," the court held that the amount deductible in respect of a similar separation agreement was the amount actually paid between the date of death and the date (one year later) of the ex-wife's remarriage, on the ground that she was not entitled to receive anything more under local law. In the *State Street Trust Co.* case, the ex-wife was entitled to $1000 per month under a divorce decree, but she entered into a "compromise agreement" with the executors under which she received $30,000 plus $650 per month; the court held that the commuted value of the payments due under the compromise, rather than the larger commuted value of the amounts payable under the decree, was deductible. (The opinion does not state whether the "compromise" resulted from a dispute over the validity of the divorce decree.) In *Jacobs* (also cited by the court in the *Gowetz* case), the decedent's widow had a $75,000 claim against the estate under an antenuptial contract, which she relinquished in favor of a bequest of the income for life from $250,000; the court did not allow the estate to deduct either the $75,000 claim or the commuted value of the bequest for which she surrendered the claim. (Under §2053(c)(1)(A) of current law, the claim would be disallowed on the alternative ground that it was founded on a promise but not supported by full and adequate consideration.)

For another reference to post-death events in order to disallow an otherwise allowable deduction, see Rev. Rul. 60-247, 1960-2 C.B. 272 (claim against estate cannot be deducted if it became unenforceable by reason of the creditor's failure to present it for payment within the period specified by local law); cf. Winer v. United States, 153 F. Supp. 941 (S.D.N.Y. 1957) (contra).

2. *Claims arising out of separation and divorce.* Was the claim in the *Gowetz* case "founded on a promise or agreement" within the meaning of §2053(c)(1)(A) so as to be deductible only if "contracted bona fide and for an adequate and full consideration in money or money's worth"? See Harris v. Commissioner, supra page 1036; Commissioner v. Watson, 216 F.2d 941 (2d Cir. 1954) (claim not founded on agreement that was incorporated in later divorce decree, although agreement was to survive divorce); Bowers' Estate v. Commissioner, 23 T.C. 911, 920-923 (1955) (under local law, agreement was independent of decree).

---

[3] Ithaca Trust involved the value of a charitable remainder subject to a life estate. The court held that the remainder did not become more valuable, from the standpoint of a deduction from the gross estate, when the life tenant died before reaching her actuarial expectancy.

When the ex-wife's claim is unmistakably "founded on a promise or agreement" (e.g., if there is no decree of separation or divorce), E.T. 19 (supra p. 1033) concedes that a release of support rights constitutes "full and adequate consideration in money or money's worth" to the extent of the value of the support rights. How is E.T. 19 to be applied if a husband's duty to support his wife terminates at his death? Does footnote 1 of the *Gowetz* opinion imply that E.T. 19 cannot be reconciled with §2043(b) (release of marital rights does not constitute, to any extent, consideration in "money or money's worth") and that it is needlessly generous to the taxpayer?

Does §2516 (supra p. 1048) have any bearing on the deductibility of claims in computing the taxable estate? If not, how would the results in this area be changed if there were an estate tax provision parallel to §2516?

Section C. Casualty Losses: §2054

Section 2054 allows the deduction of losses incurred during the settlement of estates "arising from fires, storm, shipwrecks, or other casualties, or from theft," if not compensated for by insurance or otherwise. The specified causes are identical with those in §165(c)(3), supra page 192. A loss that is claimed in computing the estate tax, however, may not be deducted a second time in computing the estate's income tax. §165(c)(3), §642(g).

Section 165(c)(3) is explicitly restricted to losses of *property*. Is §2054 similarly restricted, or could a loss of potential profits, brought on by shipwreck or fire, be deducted from the value of the gross estate? The deduction under §165(c)(3) may not exceed the "basis" of the lost property, by virtue of §165(b); see also Helvering v. Owens, supra page 195. In the case of a loss under §2054, may the full value of property at the time of the loss be deducted, even if by reason of inflation it exceeds the estate tax value? If property declines in value after the date of death, how is the loss to be computed?

In Leewitz v. United States, 75 F. Supp. 312 (Ct. Cl. 1948), cert. denied, 335 U.S. 820 (1948), the court made this comment on §2054:

> At the outset it should be observed that we are here concerned with losses for estate tax purposes where the only losses allowable are those above mentioned, as contrasted with losses allowable for income tax purposes, which include business losses, such as from bad debts, and losses on transactions entered into for profit as well as losses of the kind allowed for estate tax purposes. Only one estate tax return is filed and therefore, once a deduction is allowed, there is no chance for adjustment in another estate tax return in the event there should be some recovery on account of the item for which the deduction was allowed. On the other hand, income tax returns are filed on an annual basis and any recoveries with respect to a deduction allowed in one year will be reflected in income adjustments in a subsequent year. This comparison becomes significant as indicating the nature of the losses which are allowable for estate tax purposes; namely, losses from which no recovery would ordinarily be expected, such as from fires or storms. In addition, these losses have reference to destruction of or damage to physical property where the extent of the loss can be fully measured as of the time the loss is allowed without the necessity for future readjustment. [75 F. Supp. at 317.]

Assuming that a loss did result from casualty, within the meaning of §2054, must the *amount* of the loss be proved with greater accuracy than is required under §165(c)(3)?

A similar problem arises with respect to proof that the loss is not compensated for by insurance or otherwise. The extent of compensation is often undetermined in the year the casualty occurs; in the income tax field, it is only a matter of timing whether the taxpayer holds the item in abeyance until his claim for compensation is settled or deducts the full amount of the loss in the earlier year

and reports the insurance or other recovery as income in the year of settlement. Supra page 196. If the amount of a loss was uncertain when the estate tax return was filed, can it be claimed on an amended return when finally liquidated? Must a loss, to be deducted under §2054, occur before the estate tax return is due?

SECTION D. CHARITABLE BEQUESTS: §2055

MERCHANTS NATIONAL BANK v. COMMISSIONER

320 U.S. 256 (1943)

MR. JUSTICE RUTLEDGE delivered the opinion of the Court.

Ozro M. Field died in Massachusetts in 1936, leaving a gross estate of some $366,000. In his will he provided, after certain minor bequests, that the residue of his estate be held in trust, the income to go to his wife for life, and on her death all but $100,000 of the principal [1] to go "free and discharged of this trust" to certain named charities. Under the trust set up by the will, the trustee, petitioner here, was authorized to invade the corpus "at such time or times as my said Trustee shall in its sole discretion deem wise and proper for the comfort, support, maintenance, and/or happiness of my said wife, and it is my wish and will that in the exercise of its discretion with reference to such payments from the principal of the trust fund to my said wife, May L. Field, my said Trustee shall exercise its discretion with liberality to my said wife, and consider her welfare, comfort and happiness prior to claims of residuary beneficiaries under this trust."

[Under what is now §2055, the executor deducted as charitable bequests the value of the remainder interest in the trust, without making any allowance for the trustee's power to invade the principal for the benefit of the widow. The deduction was disallowed by the Commissioner, the executor filed a petition in the Tax Court and won, the Court of Appeals for the First Circuit reversed, and the Supreme Court granted certiorari.]

There is no question that the remaindermen here were charities. The case, at least under [§2055], turns on whether the bequests to the charities have, as of the testator's death, a "presently ascertainable" value or, put another way, on whether, as of that time, the extent to which the widow would divert the corpus from the charities could be measured accurately.

Although Congress, in permitting estate tax deductions for charitable bequests, used the language of outright transfer, it apparently envisaged deductions in some circumstances where contingencies, not resolved at the testator's death, create the possibility that only a calculable portion of the bequest may reach ultimately its charitable destination.[2] The Treasury has long accommodated the administration of the section to the narrow leeway thus allowed to charitable donors who wish to combine some private benefaction with their charitable gifts. The limit of permissible contingencies has been blocked out in a more convenient administrative form in Treasury Regulations which provide that, where a trust is created for both charitable and private purposes the charitable bequest, to be deductible, must have, at the testator's death, a value "presently ascertainable,

[1] The $100,000 was to remain in trust, the income to go in equal shares to his three adopted children and a niece of his wife, and on the death of the last of these beneficiaries the corpus was also to go to the named charities.

[2] E.g., the not unusual case of a bequest of income for life intervening between the testator and the charity, requiring computation, with the aid of reliable actuarial techniques and data, of present value from future worth.

and hence severable from the interest in favor of the private use," and further, to the extent that there is a power in a private donee or trustee to divert the property from the charity, "deduction will be limited to that portion, if any, of the property or fund which is exempt from an exercise of such power." * These Regulations are appropriate implementations of [§2055], and, having been in effect under successive reenactments of that provision, define the framework of the inquiry in cases of this sort. . . .

Whatever may be said with respect to computing the present value of the bequest of the testator who dilutes his charity only to the extent of first affording specific private legatees the usufruct of his property for a fixed period, a different problem is presented by the testator who, preferring to *insure* the comfort and happiness of his private legatees, hedges his philanthropy, and permits invasion of the corpus for their benefit. At the very least a possibility that part of the principal will be used is then created, and the present value of the remainder which the charity will receive becomes less readily ascertainable. Not infrequently the standards by which the extent of permissible diversion of corpus is to be measured embrace factors which cannot be accounted for accurately by reliable statistical data and techniques. Since, therefore, neither the amount which the private beneficiary will use nor the present value of the gift can be computed, deduction is not permitted. Cf. Humes v. United States, 276 U.S. 487.

For a deduction under [§2055] to be allowed, Congress and the Treasury require that a highly reliable appraisal of the amount the charity will receive be available, and made, at the death of the testator. Rough guesses, approximations, or even the relatively accurate valuations on which the market place might be willing to act are not sufficient. Cf. Humes v. United States, 276 U.S. 487, 494. Only where the conditions on which the extent of invasion of the corpus depends are fixed by reference to some readily ascertainable and reliably predictable facts do the amount which will be diverted from the charity and the present value of the bequest become adequately measurable. And, in these cases, the taxpayer has the burden of establishing that the amounts which will either be spent by the private beneficiary or reach the charity are thus accurately calculable. . . .

In this case the taxpayer could not sustain that burden. Decedent's will permitted invasion of the corpus of the trust for "the comfort, support, maintenance and/or happiness of my wife." It enjoined the trustee to be liberal in the matter, and to consider her "welfare, comfort and happiness prior to the claims of residuary beneficiaries," i.e., the charities.

Under this will the extent to which the principal might be used was not restricted by a fixed standard based on the widow's prior way of life. Compare Ithaca Trust Co. v. United States, 279 U.S. 151.† Here, for example, her "happi-

* The requirement that the value of the charitable bequest be "presently ascertainable" and "severable" from the noncharitable interest is carried forward by §20.2055-2(a) of the current regulations. The provision relating to bequests subject to diversion has been eliminated, but see §20.2055-2(b). — Ed.

† In the *Ithaca Trust Co.* case, the value of the remainder interest in a trust was allowed as a charitable bequest, although the decedent's widow had (in addition to a life interest in the income) the right to use principal to such extent as "may be necessary to suitably maintain her in as much comfort as she now enjoys." The court said: "The standard was fixed in fact and capable of being stated in definite terms of money. It was not left to the widow's discretion. The income of the estate at the death of the testator, and even after debts and specific legacies had been paid, was more than sufficient to maintain the widow as required. There was no uncertainty appreciably greater than the general uncertainty that attends human affairs." The court also held that in valuing the charitable bequest, allowance had to be made for the life interest of the widow computed on an actuarial basis as of the date of the decedent's death although she had died before the estate tax return was due. — Ed.

ness" was among the factors to be considered by the trustee. The sums which her happiness might require to be expended are of course affected by the fact that the trust income was not insubstantial and that she was sixty-seven years old with substantial independent means and no dependent children.[3] And the laws of Massachusetts may restrict the exercise of the trustee's discretion somewhat more narrowly than a liberal reading of the will would suggest, although that is doubtful. . . . Indeed one might well "guess, or gamble . . . , or even insure against" the principal being expended here. Cf. Humes v. United States, supra. But Congress has required a more reliable measure of possible expenditures and present value than is now available for computing what the charity will receive. The salient fact is that the purposes for which the widow could, and might wish to have the funds spent do not lend themselves to reliable prediction.[4] This is not a "standard fixed in fact and capable of being stated in definite terms of money." Cf. Ithaca Trust Co. v. United States, supra. Introducing the element of the widow's happiness and instructing the trustee to exercise its discretion with liberality to make her wishes prior to the claims of residuary beneficiaries brought into the calculation elements of speculation too large to be overcome, notwithstanding the widow's previous mode of life was modest and her own resources substantial. We conclude that the commissioner properly disallowed the deduction for estate tax purposes. . . .

Accordingly, the decision of the Court of Appeals is affirmed.

MR. JUSTICE DOUGLAS, with whom MR. JUSTICE JACKSON concurs, dissenting:

The Tax Court applied the correct rule of law in determining whether the gifts to charity were so uncertain as to disallow their deduction. That rule is that the deduction may be made if on the facts presented the amount of the charitable gifts are affected by "no uncertainty appreciably greater than the general uncertainty that attends human affairs." Ithaca Trust Co. v. United States, 279 U.S. 151, 154. In that event the standard fixed by the will is "capable of being stated in definite terms of money." Id., p. 154. The mere possibility of invasion of the corpus is not enough to defeat the deduction. The Tax Court applied that test to these facts. 45 B.T.A. 270, 273-274. Where its findings are supported by substantial evidence they are conclusive. We may modify or reverse such a decision only if it is "not in accordance with law." [§7482(c)(1).] See Wilmington Trust Co. v. Helvering, 316 U.S. 164, 168. The discretion to pay to the wife such principal amounts as the trustee deems proper for her "happiness" introduces of course an element of uncertainty beyond that which existed

3 The Board of Tax Appeals found that decedent had adopted three children — two girls and a boy — before his marriage to the present Mrs. Field. She never adopted the children. The two girls were married to husbands fully able to support them, and the boy was nearly twenty-one at the testator's death.

Immediately after decedent's death the widow owned income-producing property worth about $104,000. Her total income from her own property and the trust, and the amounts she has actually expended have been as follows:

Period	*Income*	*Expenditures*
1936 (7 months)	$10,735.35	$ 1,853.99
1937	24,738.57	10,357.91
1938	17,480.85	11,055.91
1939	17,448.23	12,024.92
1940	16,959.66	13,389.31
	$87,362.66	$48,682.04

4 E.g., the Board found that since her husband's death, Mrs. Field purchased two automobiles and a fur coat, took two pleasure trips, gave financial assistance to a niece, helped send a grand nephew through medical school, and purchased a fur coat for one of her husband's daughters.

in the *Ithaca Trust Co.* case. There the trustee only had authority to withdraw from the principal and pay to the wife a sum "necessary to suitably maintain her in as much comfort as she now enjoys." But the frugality and conservatism of this New England corporate trustee, the habits and temperament of this sixty-seven year old lady, her scale of living, the nature of the investments — these facts might well make certain what on the fact of the will might appear quite uncertain. We should let that factual determination of the Tax Court stand, even though we would decide differently were we the triers of fact.

NOTE

1. *Later cases re charitable remainders subject to invasion.* Several years later, this issue was before the Supreme Court again. In Henslee v. Union Planters Nat. Bank & Trust Co., 335 U.S. 595 (1949), a deduction was denied under these circumstances: the decedent's will provided that his gross estate of about $500,000 was to be held in trust for his mother, aged 85, to pay her $9000 per year for life, with the remainder (after certain legacies) to go to charities. The trustees could also pay the decedent's mother any part of the estate for her "pleasure, comfort and welfare." The estate was earning a net income of about $15,000 at the time of the decedent's death, and his mother, a woman "of moderate needs and without dependents," had investments of her own worth about $100,000. The Court held:

> We do not overlook the unlikelihood that a woman of the mother's age and circumstances would abandon her customary frugality and squander her son's wealth. But, though there may have been little chance of that extravagance which would waste a part or consume the whole of the charitable interest, that chance remained. What common experience might regard as remote in the generality of cases may nonetheless be beyond the realm of precise prediction in the single instance. The contingency which would have diminished or destroyed the charitable interest here considered might well have been insured against, but such an arithmetic generalization of experience would not have made this charitable interest "presently ascertainable." [335 U.S. at 599.]

Justices Douglas and Jackson dissented on the grounds stated in their dissent in the *Merchants Nat. Bank* case. Mr. Justice Frankfurter wrote:

> Wisdom too often never comes, and so one ought not to reject it merely because it comes late. Since I now realize that I should have joined the dissenters in the *Merchants Nat. Bank* case, 320 U.S. 256, I shall not compound error by pushing that decision still farther. I would affirm the judgment, substantially for the reasons given below. [335 U.S. at 600.]

The lower courts have had a hard time finding their way between the *Ithaca Trust Co.* case and the *Merchants Nat. Bank* case. For a summary of the decisions, see Kline v. United States, 202 F. Supp. 849 (N.D.W. Va. 1962); and see also the "ascertainable standard" cases, supra page 1157. In Blodget v. Delaney, 201 F.2d 589, 594-595 (1st Cir. 1953), Judge Magruder commented:

> If there is a "clear Congressional policy not to benefit the national revenue at the expense of charitable institutions," it seems that the decided cases have drawn an unfortunate line in denying a charitable deduction wherever the power to invade corpus is conferred in terms embracing "factors which cannot be accounted for accurately by reliable statistical data and techniques," 320 U.S. at page 261, even though on the existing facts and circumstances one might conclude to a moral certainty that the power would never be exercised and that the unimpaired remainder would go to the charity upon the death of the life tenant. . . . Instead of having to split hairs between "comfort and welfare" on the one hand and "comfort, support, maintenance, and/or happiness" on the other, it might seem more logical to adopt either of two alternatives: (1) To deny the charitable deduction unless the testator has

given an indefeasible remainder to charity upon the death of the life tenant, or (2) to allow the deduction in full wherever it is properly found as a fact upon consideration of all the circumstances that the chance of invasion of the corpus is negligible, however broadly or narrowly the power to invade corpus may be expressed in the will.

Would it be feasible to hold the disputed deduction in abeyance until the charitable remainder falls in, and allow it at that time?

2. *Conditional charitable bequests.* In Commissioner v. Sternberger's Estate, 348 U.S. 187 (1955), the Supreme Court had to pass on the deductibility of a bequest to charities that would take effect only if the decedent's daughter died without descendants surviving her and her mother. At the time of the decedent's death, his daughter was divorced, had not remarried, and had no children. Before the Tax Court, the decedent's executor introduced actuarial tables to establish the probability of the daughter's remarrying and having a child. On the basis of this evidence, the Tax Court allowed a deduction of about $180,000, representing the value at the time of the decedent's death of a conditional bequest of about one half of a $2,000,000 estate. The Court of Appeals for the Second Circuit affirmed. The Supreme Court reversed, resting primarily on Regs. §20.-2055-2(b), providing in part:

> If, as of the date of a decedent's death, a transfer for charitable purposes is dependent upon the performance of some act or the happening of a precedent event in order that it might become effective, no deduction is allowable unless the possibility that the charitable transfer will not become effective is so remote as to be negligible. [348 U.S. at 193.]

The Court also argued that the actuarial tables were misleading because they did not, and presumably could not, reflect the daughter's pecuniary incentive, created by the terms of the trust itself, to remarry and have children. To the executor's argument that Regs. §20.2055-2(a) provides for a deduction of the actuarial value of a remainder bequeathed to charity, the Court answered that this provision of the regulations is restricted to "deferred, but assured, bequests." It explained the *Ithaca Trust Co.* case as follows: "Where the amount [of the conditional bequest to charity] has been determinable, the deduction has . . . been allowed where the designated charity has been sure to benefit from it." Justices Reed and Douglas dissented.

United States v. Dean, 224 F.2d 26 (1st Cir. 1955), concerned the deductibility of a charitable bequest that would take effect if a woman of 82 predeceased two women aged 67 and 68. An actuarial computation showed that the charity had ten chances in eleven to take. The court held that the *Sternberger* case's rejection of actuarial tables was not controlling on these facts, since

> . . . here the chance that charity will take does not depend upon the probability of anyone having issue, a matter involving an element of volition. In this case the chance that charity will benefit depends entirely upon the relative longevity of three persons, a matter unaffected by volition or personal inducement, for it would be preposterous to assume that either [of the two younger women] would choose to commit suicide in order to defeat the decedent's bequest to charity. [224 F.2d at 28.]

But the deduction was denied on the ground that under the *Sternberger* case, a contingent bequest was to be allowed in full only if the chance of its not taking was so remote as to be negligible, but disallowed otherwise. See also Rev. Rul. 59-143, 1959-1 C.B. 247 (charitable bequest contingent on death of two women, aged 55 and 59, without issue; held, statistical probability of issue so remote as to be "negligible" so deduction is allowable); Bankers Trust Co. v. United States, 191 F. Supp. 792 (S.D.N.Y. 1961), aff'd per curiam, 299 F.2d 936 (2d Cir. 1962) (contra as to woman of 47, especially in view of "factor of individual volition").

Suppose the life beneficiary of a trust, the remainder of which will go to a charity, is to receive an annuity that, if he greatly outlives his life expectancy, will exhaust both the income and the principal of the trust. Will the actuarial value of the charitable

bequest be deductible? Does the annuitant have an incentive to live carefully? According to an old saw, "Annuitants never die; pensioners live forever."

What is the effect of a charitable bequest that is conditioned upon specified action by the recipient, for example, to Yale, to establish the Josef Djugashvilli Professorship of Political Economy? See Churchill v. United States, 68 F. Supp. (E.D. Wis. 1946) (bequest to local and state government of farm, to be used as public park, with gift over to an individual legatee if the property was not accepted for such use or if it ceased to be so used; held, although property was accepted for park use 4 years after decedent's death, the possibility of non-acceptance was more than negligible, so no deduction allowed; in a dictum, the court suggested that prompt acceptance would have justified a deduction because later divestment for failure to continue the public use would have been a negligible possibility). See Perry v. United States, supra page 75, for another contingent gift to charity.

3. *Disclaimer of intervening noncharitable bequest.* The parenthetical clause of §2055(a) provides a method by which an intervening noncharitable bequest, power of invasion, etc. may be relinquished in order to save the charitable deduction. As to a purported disclaimer of rights under a spendthrift trust, see Schoonmaker's Estate v. Commissioner, 6 T.C. 404 (1946). The final sentence of §2055(a) was added in 1954 to insure that a charitable deduction would be allowed if the intervening right to invade corpus for a noncharitable purpose terminated by reason of the beneficiary's death before the estate tax return was due. The provision was explained at 100 Cong. Rec. 9496 (1954) as especially intended to protect the charitable deduction where the beneficiary was in such bad health when the decedent died that he could not execute the disclaimer authorized by the parenthetical clause of §2055(a).

The decedent executed a will by which he made certain charitable bequests, and died within 30 days thereafter. The law of his state (Pennsylvania) provided that bequests for charitable or religious uses made by will within 30 days of death "shall be void and go to the residuary legatee or devisee, heirs or next of kin, according to law." The residuary legatees waived any objection to a distribution of the estate according to the terms of the will, however, and the probate court ordered distribution to be made accordingly. The Tax Court held that because of the state statute the attempted gift to charities were void so that there were no "bequests, legacies, devises, or transfers" *from the decedent,* and that what the charities received was a gift from the residuary legatees. The "disclaimers" were held to be irrelevant, on the ground that the parenthetical clause of §2055(a) permits a deduction only if an interest "falls into" a bequest, etc., as a result of the disclaimer. The court distinguished two similar cases allowing the deduction on the ground that the state statutes there involved made the charitable bequests "voidable rather than void." (In fact, one statute used the term "void" and the other the term "invalid.") Estate of Carey v. Commissioner, 9 T.C. 1047 (1947), aff'd without opinion sub nom. Marine Nat. Bank v. Commissioner, 168 F.2d 400 (3d Cir. 1948).

4. *Fulfillment of condition after decedent's death as validating a contingent bequest.* If the daughter in *Sternberger's Estate* had died without issue shortly after the decedent's death and thus insured that the charity would take the remainder interest, would the rationale of the *Gowetz* case, supra page 1276, have justified a charitable deduction? The Regulations state that a deduction is allowable only if "as of the date of a decedent's death" the possibility that the charity will not take the bequest is so remote as to be negligible. Regs. §20.2055-2(b). Is there a difference between §2053 and §2055 in their tolerance for evidence based on post-death events? Does the last sentence of §2055(a) (bequest deductible if power to consume, etc. terminates before estate tax return is due, without having been exercised) give rise to a negative inference that no other events occurring after the death of the decedent will serve to qualify a charitable bequest for a deduction?

5. *Computation of amount of charitable bequest.* Section 2055(c) provides that if any death taxes are payable out of the charitable bequest, the deduction is limited to the net amount receivable by the charity. This provision overrules Edwards v. Slocum, 264 U.S. 61 (1924), holding under prior law that the gross amount of a residuary bequest to charities could be deducted even though they would receive the residue less federal and

state death taxes. In Harrison v. Northern Trust Co., 317 U.S. 476 (1943), the taxpayer contended — after the statute had been amended — for a similar result on the ground that the federal estate tax was not "payable . . . out of" the residuary (charitable) bequest because under Illinois law it was a *charge* against the entire estate, though its ultimate *burden* was admittedly on the residue. The Court held that "Congress used the words 'payable out of' in the sense of 'diminished or reduced by' the payment of the tax." Since the taxes due depend on the size of the charitable deduction and vice versa, computation of the taxes payable in such cases requires trial and error or the use of algebraic formulas, details of which may be found in the loose-leaf tax services. See also Burstein and Stein, Computation of Estate Tax When Interdependent Deductions Are Present, 29 Taxes 455 (1951).

In Luehrmann's Estate v. Commissioner, 287 F.2d 10 (8th Cir. 1961), in which the executors elected to deduct administration expenses on the income tax return rather than on the estate tax return (supra p. 1272), the court held that if the corpus of the estate was in fact diminished by the expenses, the charitable deduction was limited to the amount actually payable to the charity. The Tax Court (33 T.C. 277) had held that even if the expenses were paid out of income, the estate could deduct only the bequest less the expenses, on the theory that the additional amount received by the charity was a contribution by the income beneficiary rather than the estate.

See Rev. Rul. 145, 1953-2 C.B. 273, involving a compromise agreement under which the decedent's second will was admitted to probate with the consent of a charity that was to have received a bequest under an earlier will; the Service ruled that the amount actually paid to the charity under the compromise was deductible, even though it exceeded the amount specified in the second will; DuMont's Estate v. Commissioner, 150 F.2d 691 (3d Cir. 1945) (amount paid to charity under compromise deductible under doctrine of Lyeth v. Hoey, supra p. 145).

Section 2053(d), enacted in 1956 but retroactive to January 1, 1954, is concerned with an intricate aspect of this already complicated area. Some states levy an inheritance tax on charitable bequests. If the state tax is paid out of the amount that would otherwise go to the charity, only the net amount qualifies as a charitable deduction under §2055(c); and if the resulting increase in federal estate tax must also be paid out of the bequest, the charity's share will be reduced still further. The executor may elect under §2053(d) to deduct the state inheritance tax in such a case, provided the resulting decrease in the federal estate tax will inure to the benefit of the charity. See Darlington's Estate v. Commissioner, 36 T.C. 599 (1961).

See Drye, Testamentary Gifts of Income to Charity, 13 Tax L. Rev. 49 (1957), discussing certain tax and other benefits that may result from making a charitable bequest in the form of income (e.g., a testamentary trust under which the income will go to charity for 5 years), rather than in the form of an outright bequest.

6. *Qualified charitable donees.* To qualify for the deduction, the charitable bequest must be to or for the use of an organization described in §2055(a). As pointed out supra page 175, the provisions for income, estate, and gift tax deductions for charitable contributions largely overlap in specifying the characteristics of qualifying organizations, but there are some unaccountable minor variations.

SECTION E. THE MARITAL DEDUCTION: §2056 *

UNITED STATES v. STAPF

375 U.S. 118 (1963)

MR. JUSTICE GOLDBERG delivered the opinion of the Court.

Respondents brought this suit against the Government in the District Court for the Northern District of Texas for a refund of estate taxes paid pursuant to an asserted deficiency. The Court of Appeals for the Fifth Circuit held that respondents were entitled to certain marital deductions under [§2056]. . . .

* For background, see pages 1110 et seq. supra.

Lowell H. Stapf died testate on July 29, 1953, a resident and domiciliary of Texas, a community property jurisdiction. At the time of his death he owned, in addition to his separate estate, a substantial amount of property in community with his wife. His will required that his widow elect either to retain her one-half interest in the community or to take under the will and allow its terms to govern the disposition of her community interest. If Mrs. Stapf were to elect to take under the will, she would be given, after specific bequests to others, one-third of the community property and one-third of her husband's separate estate. By accepting this bequest she would allow her one-half interest in the community to pass, in accordance with the will, into a trust for the benefit of the children. It was further provided that if she chose to take under the will the executors were to pay "all and not merely one-half" of the community debts and administration expenses.

The relevant facts and computations are not in dispute. The decedent's separate property was valued at $65,100 and the community property at $258,105. The only debts were community debts totalling $32,368. The administration expenses, including attorneys' fees, were $4,073. If Mrs. Stapf had not elected to take under the will, she would have retained her fully vested one-half interest in the community property ($129,052) which would have been charged with one-half of the community debts ($16,184) and 35% of the administration expenses ($1,426). Thus, as the parties agree, she would have received a net of $111,443.

In fact Mrs. Stapf elected to take under the will. She received, after specific bequests to others, one-third of the combined separate and community property, a devise valued at $106,268, which was $5,175 less than she would have received had she retained her community property and refused to take under the will.[1]

In computing the net taxable estate, the executors claimed a marital deduction under [§2056] of the Internal Revenue Code of [1954] for the full value of the one-third of decedent's separate estate ($22,367) which passed to his wife under the will. The executors also claimed a deduction for the entire $32,368 of community debts as "claims against the estate" under [§2053(a)(3)] and for the entire $4,073 of expenses as "administration expenses" under [§2053(a)(2)]. The Commissioner of Internal Revenue disallowed the marital deduction and the deductions for claims and administration insofar as these represented debts (50%) and expenses (35%) chargeable to the wife's one-half of the community. Respondents then instituted this suit for a tax refund. The District Court allowed the full marital deduction but disallowed the disputed claims and expenses. 189 F. Supp. 830. On cross-appeals the Court of Appeals, with one judge dissenting on all issues, held that each of the claimed deductions was allowable in full. 309 F.2d 592. For reasons stated below, we hold that the Commissioner was correct and that none of the disputed deductions is allowable.

I. The Marital Deduction

By electing to take under the will, Mrs. Stapf, in effect, agreed to accept the property devised to her and, in turn, to surrender property of greater value to the

[1] The parties agree that the net effect of taking under the will may be computed by another method. As explained by the Court of Appeals, "Computed differently but with the same result, the widow retained a one-third interest out of the one-half of the community owned by her, thereby transferring only a one-sixth interest under the election to take. Under this method of computation she transferred property having a valuation of $27,541.16 and received property being the one-third interest in the separate property of the husband and the one-half interest in the automobile of the aggregate value of the $22,366.66, making a net loss to her of $5,174.50." 309 F.2d 592, 594.

trust for the benefit of the children. This raises the question of whether a decedent's estate is allowed a marital deduction under [§2056(b)(4)(B)] where the bequest to the surviving spouse is on the condition that she convey property of equivalent or greater value to her children. The Government contends that, for purposes of a marital deduction, "the value of the interest passing to the wife is the value of the property given her less the value of the property she is required to give another as a condition to receiving it." On this view, since the widow had no net benefit from the exercise of her election, the estate would be entitled to no marital deduction. Respondents reject this net benefit approach and argue that the plain meaning of the statute makes detriment to the surviving spouse immaterial.

Section [2056(b)(4)] deals specifically with the question of valuation:

> (4) Valuation of Interest Passing to Surviving Spouse. — In determining for the purposes of [§2056(a)] the value of any interest in property passing to the surviving spouse for which a deduction is allowed by this section —
>
> . . .
>
> (B) where such interest or property is incumbered in any manner, or where the surviving spouse incurs any obligation imposed by the decedent with respect to the passing of such interest, such incumbrance or obligation shall be taken into account in the same manner as if the amount of a gift to such spouse of such interest were being determined.

The disputed deduction turns upon the interpretation of (1) the introductory phrase "any obligation imposed by the decedent with respect to the passing of such interest," and (2) the concluding provision that "such . . . obligation shall be taken into account in the same manner as if the amount of a gift to such spouse of such interest were being determined."

The Court of Appeals, in allowing the claimed marital deduction, reasoned that since the valuation is to be "as if" a gift were being taxed, the legal analysis should be the same as if a husband had made an inter vivos gift to his wife on the condition that she give something to the children. In such a case, it was stated, the husband is taxable in the full amount for his gift. The detriment incurred by the wife would not ordinarily reduce the amount of the gift taxable to the husband, the original donor.[2] The court concluded:

> Within gift tax confines the community property of the widow passing under the will of the husband to others may not be "netted" against the devise to the widow, and thus testator, were the transfer inter vivos, would be liable for gift taxes on the full value of the devise. 309 F.2d 592, 598.

This conclusion, based on the alleged plain meaning of the final gift-amount clause of [§2056(b)(4)(B)], is not supported by a reading of the entire statutory provision. First, [§2056(a)] allows a marital deduction only for the decedent's gifts or bequests which pass "to his surviving spouse." In the present case the effect of the devise was not to distribute wealth to the surviving spouse, but instead to transmit, through the widow, a gift to the couple's children. The gift-to-the-surviving-spouse terminology reflects concern with the status of the actual recipient or donee of the gift. What the statute provides is a "marital deduction" — a deduction for gifts *to the surviving spouse* — not a deduction for gifts

---

[2] See, e.g., Commissioner v. Wemyss [supra p. 1025]. There the Court stated that under the Revenue Act of 1932 mere detriment to the transferee did not constitute the requisite "consideration in money or money's worth" to the transferor so as to relieve him of gift tax liability. Respondents' reliance on this case ignores that it involved neither a determination of who was to be considered the beneficial donee nor a valuation of the gift received by such donee.

to the children or a deduction for gifts to privately selected beneficiaries. The appropriate reference, therefore, is not to the value of the gift moving from the deceased spouse but to the net value of the gift received by the surviving spouse.

Second, the introductory phrases of [§2056(b)(4)(B)] provide that the gift-amount determination is to be made "where such interest or property is incumbered in any manner, or where the surviving spouse incurs any obligation imposed by the decedent with respect to the passing of such interest. . . ." The Government, drawing upon the broad import of this language, argues: "An undertaking by the wife to convey property to a third person, upon which her receipt of property under the decedent's will is conditioned, is plainly an 'obligation imposed by the decedent with respect to the passing of such interest.'" Respondents contend that "incumbrance or obligation" refers only to "a payment to be made *out of* property passing to the surviving spouse." Respondents' narrow construction certainly is not compelled by a literal interpretation of the statutory language. Their construction would embrace only, for example, an obligation *on* the property passing whereas the statute speaks of an obligation "*with respect* to the passing" gift. Finally, to arrive at the real value of the gift "such . . . obligation shall be taken into account. . . ." In context we think this relates the gift-amount determination to the net economic interest received by the surviving spouse.

This interpretation is supported by authoritative declarations of congressional intent. The Senate Committee on Finance, in explaining the operation of the marital deduction, stated its understanding as follows:

> If the decedent bequeaths certain property to his surviving spouse *subject,* however, *to her agreement,* or a charge on the property, for payment of $1,000 to X, the value of the bequest (and, accordingly, the value of the interest passing to the surviving spouse) is the value, reduced by $1,000, of such property." S. Rep. No. 1013, 80th Cong., 2d Sess., Pt. 2, p. 6. (Emphasis added.)

The relevant Treasury Regulation is directly based upon, if not literally taken from, such expressions of legislative intent. Treas. Reg. [§20.2056(b)-4(b)]. The Regulation specifically includes an example of the kind of testamentary disposition involved in this case:

> A decedent bequeathed certain securities to his wife in lieu of her interest in property held by them as community property under the law of the State of their residence. The wife elected to relinquish her community property interest and to take the bequest. For the purpose of the marital deduction, the value of the bequest is to be reduced by the value of the community property interest relinquished by the wife.[3]

We conclude, therefore, that the governing principle, approved by Congress and embodied in the Treasury Regulation, must be that a marital deduction is allowable only to the extent that the property bequeathed to the surviving spouse exceeds in value the property such spouse is required to relinquish.

[3] The Regulation provides another relevant illustration "of property interests which passed from the decedent to his surviving spouse subject to the imposition of an obligation by the decedent: (1) A decedent devised a residence valued at $25,000 to his wife, with a direction that she pay $5,000 to his sister. For the purpose of the marital deduction, the value of the property interest passing to the wife is only $20,000."

See Lowndes and Kramer, Federal Estate and Gift Taxes (1962), §17.4: "[W]hat the Regulations are driving at seems to be this. If a decedent bequeaths property to his wife in lieu of her interest in community property, which is not part of his estate and which does not pass to her from him, it seems clear that the only thing which the surviving spouse actually receives from the decedent is the excess of the interest bequeathed to her over and above the value of her interest in the community property. Therefore, this should be the only amount which qualifies for the marital deduction. . . ."

Our conclusion concerning the congressionally intended result under [§2056] accords with the general purpose of Congress in creating the marital deduction. The 1948 tax amendments were intended to equalize the effect of the estate taxes in community property and common-law jurisdictions. Under a community property system, such as that in Texas, the spouse receives outright ownership of one-half of the community property and only the other one-half is included in the decedent's estate. To equalize the incidence of progressively scaled estate taxes and to adhere to the patterns of state law, the marital deduction permits a deceased spouse, subject to certain requirements, to transfer free of taxes one-half of the non-community property to the surviving spouse. Although applicable to separately held property in a community property state, the primary thrust of this is to extend to taxpayers in common-law States the advantages of "estate splitting" otherwise available only in community property States. The purpose, however, is only to permit a married couple's property to be taxed in two stages and not to allow a tax-exempt transfer of wealth into succeeding generations. Thus the marital deduction is generally restricted to the transfer of property interests that will be includible in the surviving spouse's gross estate. Respondents' construction of [§2056] would, nevertheless, permit one-half of a spouse's wealth to pass from one generation to another without being subject either to gift or estate taxes.[4] We do not believe that this result, squarely contrary to the concept of the marital deduction, can be justified by the language of [§2056]. Furthermore, since in a community property jurisdiction one-half of the community normally vests in the wife, approval of the claimed deduction would create an opportunity for tax reduction that, as a practical matter, would be more readily available to couples in community property jurisdictions than to couples in common-law jurisdictions. Such a result, again, would be unnecessarily inconsistent with a basic purpose of the statute.

Since in our opinion the plain meaning of [§2056] does not require the interpretation advanced by respondents, the statute must be construed to accord with the clearly expressed congressional purposes and the relevant Treasury Regulation. We conclude that, for estate tax purposes, the value of a conditional bequest to a widow should be the value of the property given to her less the value of the property she is required to give to another. In this case the value of the property transferred to Mrs. Stapf ($106,268) must be reduced by the value of the community property she was required to relinquish ($111,443). Since she received no net benefit, the estate is entitled to no marital deduction.

II. Claims Against the Estate and Administration Expenses

[Omitted.]

NOTE

References. On the question whether the marital deduction has achieved the equalization between community property and common law states for which it was enacted, see Anderson, The Marital Deduction and Equalization Under the Federal Estate and Gift

[4] The Court of Appeals recognized the effect of its decision: "Here estate taxes are due now on the property of the husband with the devise to the widow excluded. It is a part of the marital deduction or exclusion on which taxes are deferred to the estate of the widow to be assessed on so much of it as survives on another day. The net of the transfer by the widow became subject to gift taxes at the time of the transfer. The property transferred by the widow will, to the extent of an amount equal to the devise to her, escape both gift and estate taxes." 309 F.2d 592, 598. For an illustration of the tax effects of the decision, see the dissent of Judge Wisdom. 309 F.2d, at 608-609.

Taxes Between Common Law and Community Property States, 54 Mich. L. Rev. 1087 (1956); Surrey, Federal Taxation of the Family — The Revenue Act of 1948, 61 Harv. L. Rev. 1097, 1117-1159 (1948); De Wind, The Approaching Crisis in Federal Estate and Gift Taxation, 38 Calif. L. Rev. 79, 86-91 (1950).

VERMILYA'S ESTATE v. COMMISSIONER

41 T.C. 226 (1963)

FAY, Judge: The respondent determined a deficiency of $1,265.44 in the estate tax of the petitioner. The only issue for decision is whether the petitioner is entitled to the estate tax marital deduction with respect to the property passing from the decedent to his wife under the decedent's will.

All of the facts are stipulated and are found as stipulated.

The petitioner, the estate of James Mead Vermilya, by its executor, George H. Vermilya, filed its Federal estate tax return with the district director of internal revenue, St. Paul, Minnesota.

The decedent during his lifetime was married to Anna Vermilya. On August 8, 1957, decedent and Anna executed a joint and reciprocal will which provided as follows:

JOINT LAST WILL AND TESTAMENT

I, Mead Vermilya, and I, Anna Vermilya, husband and wife, and each of us, and both of us, being of sound mind and memory, and realizing the uncertainty of life, and the certainty of death, and wishing to direct how our property shall be distributed on the death of each of us, and both of us, do hereby make, publish and declare this to be our Last Will and Testament, and do hereby revoke all former wills and codicils by us made.

ARTICLE I

It is the will of each of us, and of both of us, that all our just debts and funeral expenses, and costs of administration be paid as soon after our death as practical.

ARTICLE II

It is the will and desire of each of us, and the mutual wish and desire of both of us that on the death of either of us all the property of the deceased party, whether real, personal or mixed shall become the property of the surviving party in fee simple and absolute.

In furtherance of this intention, I, Mead Vermilya, and I, Anna Vermilya, and each of us for ourselves do hereby give, devise and bequeath to the survivor of us all of the property, both real and personal, of which I may die seized, possessed or entitled, to have and to hold in fee simple and absolute.

ARTICLE III

After the death of both of us, and of the survivor of us, we give, devise and bequeath to Kenneth Majerus, an undivided one-half interest in and to our home farm, being that parcel of land in the County of Olmsted, and State of Minnesota, described as follows. . . .

[Articles IV-VII, making similar bequests, omitted.]

ARTICLE VIII

After the death of both of us and of the survivor of us, we direct that our executor liquidate and convert into cash all the assets remaining after the payment of the specific legacies hereinbefore set forth in Articles I to VII inclusive, and that of the sum so realized, we give, devise and bequeath as follows:

[Fractional shares to various relatives omitted.]

On February 10, 1959, with the will still in effect, James died. On February 21, 1959, Anna petitioned the Probate Court of Wabasha County, Minnesota, to admit this will to probate. After a hearing, the will was admitted to probate on March 30, 1959. George H. Vermilya, who was appointed executor in the will, was issued letter testamentary authorizing him to act as executor on April 6, 1959.

At the time of his death, James owned the following property, valued as of that time:

1. [Land]	$46,000.00
2. 65 shares of common stock of Vermilya Brothers, Incorporated	20,930.00
3. Other stocks and bonds	767.00
4. Jointly owned property	7,304.88
5. Miscellaneous personal property	13,732.00
Total	$88,733.88

The estate incurred and claimed deductible funeral and administrative expenses in the amount of $1,720.49.

On July 11, 1959, the executor filed a final accounting for the estate. After a hearing was held on this final accounting, an order of distribution was entered by the Probate Court of Wabasha County on September 23, 1959, vesting the entire estate in Anna in fee simple.

On its estate tax return the estate claimed a marital deduction in the amount of $43,506.69, which was one-half of the adjusted gross estate. The respondent determined that the estate was not entitled to a marital deduction for the property passing to Anna under the will, and accordingly disallowed the deduction claimed except for the amount of $7,304.88, which was the value of joint property passing to Anna.

The respondent contends, on two separate grounds, that the decedent's wife received only a "terminable interest" in the property she received under the decedent's will, and thus the petitioner is not entitled to claim the marital deduction with respect to it. This contention is based on section 2056(b)(1). . . .

As the first ground for the respondent's contention, he urges that the decedent's will grants only a life estate to the surviving spouse in the property passing under it.

In determining what estate was created in the surviving spouse by the will, we must look to state law, Morgan v. Commissioner, 309 U.S. 78 (1940). It is true that Minnesota, in which the decedent was domiciled at his death, applies the general rule in construing wills that the intent of the testator governs. In re Freeman's Estate, 151 Minn. 446, 187 N.W. 411 (1922). Furthermore, the intent of the testator, as determined by a reading of the entire will, may control in spite of specific language in the will indicating a contrary result. In re Quinlan's Estate, 233 Minn. 35, 45 N.W.2d 807 (1951). However, Minnesota cases lead us to conclude that the Minnesota courts would hold the will granted a fee simple absolute title to the surviving spouse. In re Wadsworth's Estate, 176 Minn. 445, 223 N.W. 783 (1929); In re Hasey's Estate, 192 Minn. 582, 257 N.W. 498 (1934). Since we reach the same conclusion as the Minnesota Probate Court, we need not consider the effect of that court's decree of distribution.

As a second ground for the respondent's contention, he urges that the joint and reciprocal will evidences a contract between the decedent and his spouse that each would leave his property on death in the manner provided in the will. Thus, he says, all property which the surviving spouse received from the decedent was received subject to a contract duty to will it in a specific way. Therefore, he would conclude that all of the interests in property received by the surviving spouse under the will were "terminable interests" within the meaning of section 2056(b)(1)

of the Code and, thus, not qualified for the marital deduction. He bases the latter conclusion on section 20.2056(e)-2(a), Estate Tax Regs., which provides:

> The deduction may not be taken with respect to a property interest which passed to such spouse merely as trustee, or subject to a binding agreement by the spouse to dispose of the interest in favor of a third person. . . .

The States are divided on the question whether the existence of a contract can be inferred from a joint and reciprocal will alone. We find no Minnesota case settling the matter in that jurisdiction.

Contracts to dispose of property in a certain way are recognized as lawful in Minnesota. Mosloski v. Gamble, 191 Minn. 170, 253 N.W. 378 (1934). The case of Mosloski v. Gamble, supra, explains the effect of these contracts under Minnesota law. Where a promisor under such a contract makes a will carrying out the terms of the contract, the will remains revocable. Whether the will is revoked or not, the property owned by the promisor at his death will pass through his probate estate. If no effective will is left carrying out the terms of the contract, the beneficiary under the contract may bring a collateral action in an equity court and have a constructive trust impressed upon the property which is subject to the contract.

If, as the respondent contends, the joint will here is contractual as well as testamentary, then the terms of the contract would be found in the provisions of the will. In the will each spouse leaves everything absolutely to the surviving spouse. By the remaining testamentary provisions the last spouse to die leaves all property owned at death to certain collateral relatives of each testator. Thus, if the will evidences an agreement, that agreement was as follows: That in return for the reciprocal gifts and for each other's promise each spouse agreed to leave his property, at death, in the manner provided in the joint will. This agreement would apply to two classes of property. It would apply on the one hand to specific items of property referred to in the joint will, and on the other hand, to all other property of the last spouse to die, whether acquired from the other spouse or not. Thus, the agreement was to make certain specific devises and certain general devises of all other property owned at death. We point out this dichotomy because, as we shall show, promises to leave specific property and promises to leave all property owned at death are treated differently.

Where a contract is made to devise specific property, a conveyance of that property by the promisor during his lifetime is a breach of contract. . . . If the conveyance is to a bona fide purchaser who takes legal title for value and without notice of the contract, the conveyance cannot be set aside. . . . If, however, the grantee of such a conveyance did not give value or had notice of the contract at the time of the grant, the conveyance may be set aside. . . .

The situation is different in the case of a contract to devise some general class of property such as "all property owned at death." Under such a contract, the promisor may deal with the property involved as he wishes and may even make gifts if they are reasonable in amount and not in fraud of the rights of the contract beneficiary. . . .

Having considered the rights conferred on the contract beneficiary by each type of contract, we must now determine whether property received subject to such contracts should be considered as a "terminable interest" under the language of section 2056(b) of the Internal Revenue Code of 1954.

The first requirement of a "terminable interest" under section 2056(b) is that "an interest in such property passes or has passed (for less than an adequate and full consideration in money or money's worth) from the decedent to any person other than such surviving spouse (or the estate of such spouse)." Under a con-

tract to devise specific property, the rights of the contract beneficiary might be considered sufficiently extensive to justify a conclusion that the beneficiary has received an interest in the property at the time the contract is made. We believe that it is to property subject to this type of contract that the provision of the Estate Tax Regulations (section 20.2056(e)-2(a), supra), upon which the respondent relies, refers.

However, in the case of a contract to leave all property owned at death, it cannot be said that any interest in property is received by the beneficiary upon the making of the contract. This type of contract does not apply to any specific property. Such property as the promisor has at any time during his lifetime may be used up or conveyed away by the time the promisor is ultimately required to perform. A contract of this kind may operate actually only on property acquired by the promisor after he has made the contract, as, for example, in the case where the promisor had no property at the time the contract was made. Therefore, during the lifetime of the promisor the beneficiary cannot be considered as having an interest in the property. . . . Thus, if a decedent leaves property to his spouse, that property is not disqualified for the marital deduction as a "terminable interest" merely because it would, if held until the death of the second spouse, be subject to a contract to leave all property owned at death in a certain manner.

In applying these rules to the circumstances before us, we find that provision was made for a specific devise of a one-half interest in certain lands. It appears that at the death of the decedent he owned other land in addition to that mentioned in the will. However, even if half of the value of all of the land he owned at death was excluded from the marital deduction, there would still remain a sufficient deduction to eliminate any estate tax upon the estate. . . .

For the same reason, it is unnecessary for us to decide whether the specific gifts in the will of shares of stock in Vermilya Brothers, Incorporated, were intended to constitute specific devises or general devises. Even if the value of the 32½ shares of stock mentioned in the will was to be excluded from the marital deduction, no tax would result.

No other property is specifically mentioned in the will. Thus, all other property received by the decedent's spouse could be subject only to a general promise to leave all the property owned by her at her death in the manner provided in the will. We hold that such other property qualifies for the marital deduction.

Finally, it might be pointed out that our case here differs from Estate of Emmet Awtry, 22 T.C. 91 (1954), reversed 221 F.2d 749 (C.A. 8, 1955). In that case the will specifically granted a life estate only to the surviving spouse, whereas here the will grants a fee simple estate. This case also differs from Estate of Gust Marion Peterson, 23 T.C. 1020 (1955), reversed per curiam 229 F.2d 741 (C.A. 8, 1955). In the *Peterson* case we held that the will granted a life estate only to the surviving spouse under the laws of Nebraska. Here we have a case arising in Minnesota, and under Minnesota law it appears clear that the surviving spouse would be held to receive a fee simple estate. Lastly, the interest given the surviving spouse here differs from the life estate with power of invasion with which we dealt in Estate of Francis F. Field, 40 T.C. 802 (1963). There we held a life estate with power of invasion disqualified for the marital deduction because the surviving spouse could not appoint to herself or her estate. Here the surviving spouse received the full fee simple title to the property involved, and, if she owns it at her death, it will pass through her probate estate.

Reviewed by the Court.

Decision will be entered for the petitioner.

WITHEY, J., concurring: I concur in the result herein in view of the wording of Article II of the will. In the first paragraph it is unequivocally stated that the

intention of the mutual testators is that all property of the deceased testator "shall become the property of the surviving party in fee simple and absolute" and the bequest contained in the second paragraph of Article II to the effect that all such property shall go to the survivor "to have and to hold in fee simple and absolute" is in pursuance of that clearly stated intention. Differentiation in this opinion between property bequeathed generally and property which is devised specifically is therefore, in my view, unwarranted. With an intention so clearly stated and so clearly carried out I cannot conclude but what, should it have been necessary for the taxpayer herein or should she have merely desired to use all of the property passing to her from her deceased husband under their mutual will a Minnesota Court would not have prevented her from doing so.

BRUCE, FISHER, and MULRONEY, JJ. agree with this concurring opinion.

NOTE

1. *Joint and reciprocal wills.* In *Vermilya's Estate,* the court held that the widow's interest in the property bequeathed to her by her husband was not "terminable" within the meaning of §2056(b). Did the court also hold, by implication, that the limitation of §2056(b)(4), regarding the effect of encumbrances on the value of the surviving spouse's interest, was not applicable? Does the *Stapf* case, supra page 1286, require any revision in the result or reasoning in *Vermilya's Estate?*

In view of the restrictions (described in *Vermilya's Estate*) imposed by a joint and reciprocal will on the survivor's power to dispose of specific property owned by him or acquired by inheritance from his spouse, is such property includible in his gross estate? See Olson v. Reisimer, 271 F.2d 623 (7th Cir. 1959).

2. *Reference.* Comment, Joint and Mutual Wills and the Martial Deduction, 44 Marq. L. Rev. 209 (1960); Comment, The Mysterious Non-Terminable Terminable Interest: Reciprocal Wills, Inter-Spousal Contracts, Joint Tenancies, and the Federal Estate Tax Marital Deduction, 55 Nw. U.L. Rev. 727 (1961).

PIATT v. GRAY

321 F.2d 79 (6th Cir. 1963)

Before MILLER, Circuit Judge, and MCNAMEE and BOYD, District Judges.

MCNAMEE, District Judge.

This appeal challenges the correctness of the judgment of the District Court in disallowing a marital deduction for an interest passing under the will of Thomas Carr Piatt to his widow, Jane G. Piatt. Thomas Carr Piatt died at his residence in Fayette County, Kentucky on November 14, 1953. His will was admitted to probate on November 23, 1953. Item III of the will gives rise to this controversy, and, in pertinent part, provides:

> All of the rest and residue of my personal estate consisting of my personal property of any nature or description whatsoever after the payment of debts and these specific bequests above set out, I give and bequeath the same to my beloved wife, Jane, for and during her natural life. She shall have the power, right and authority whenever, in her opinion, it shall be necesary for her maintenance, comfort or well-being to expend all or any part of the principal of my said personal property without being required to account therefor, and she shall have the further right, power and authority to sell, lease, encumber or otherwise dispose of any and all items of personal property belonging to me and to give any purchaser a good fee simple title thereto.
>
> Upon the death of my beloved wife, Jane, the remainder of my personal estate I give and bequeath to my sister, Nancy Piatt Young, in trust for her life.

with further provision that upon the death of Nancy Piatt Young the property shall pass to her children.

The District Court's disallowance of the claim for marital deduction was on the ground that the surviving spouse lacked the power to make an independent testamentary disposition of the unconsumed portion of the principal of the estate withdrawn by her. The appellee, who of course prevailed in the court below, agrees with the result reached by the District Court but disagrees with that court's determination that to qualify for a marital deduction the widow must have the power to make a testamentary disposition of the property. Appellee asserts, however, that the district court's decision is sustainable on other grounds. It is fundamental that — "[I]f the decision below is correct, it must be affirmed, although the lower court relied upon a wrong ground or gave a wrong reason." Helvering v. Gowran, 302 U.S. 238, 245, and cases cited therein.

We are called upon to decide (A) whether the terms of Item III of the testator's will meet the requirements of [§2056] so as to warrant the allowance of the marital deduction; and (B) to determine the specific legal interest or right created by Item III of the will under the law of Kentucky.

(A)

In the opinion of the appellants the bequest to the widow of the life estate in the testator's personal property with the concomitant powers therein conferred is the equivalent of a life estate with the general power of appointment under [§2056-(b)(5)], as amended by Section 93 of the Technical Amendments Act of 1958.* In support of the foregoing contention appellants rely heavily on the legislative history of Section 93, particularly on House Report No. 1027 of the House Committee on Ways and Means which accompanied H.R. 8881. Appellants place special emphasis on the following language of the Report:

> For example, *if the surviving spouse has, in addition to a life interest, the unrestricted right, in her sole discretion, to invade and use the property generally for her comfort, happiness and well being, such a power would meet the test prescribed in subsection (a) even though there is no separately stated power to dispose of the property.* These broad powers in the surviving spouse to use, consume, or invade give the spouse an interest equivalent to a general power of appointment, which makes the property includible in the spouse's gross estate upon death. (Emphasis added.) 85th Congress, 1st Session, House of Representatives, Report No. 1027, August 7, 1957, pp. 1, 3.

Appellants cite and rely upon Lincoln Rochester Trust Co., Adm'r v. United States, 188 F. Supp. 839 (W.D.N.Y.). In that case the district court relied upon and quoted at length from Report No. 1027. However, the judgment of the district court was reversed in United States v. Lincoln Rochester Trust Co., 297 F.2d 891 (C.A.2) and, as noted by the Court of Appeals, H.R. 8881 never became law. It was passed by the House, referred to the Senate Finance Committee and apparently pigeon-holed there. In Bill form, the Technical Amendments Act was H.R. 8381, which was not associated with House Report 1027. In its opinion in the *Lincoln Rochester Trust* case, the appellate court said, inter alia:

* As originally enacted in 1948, the provision that is now §2056(b)(5) applied only to transfers in trust, under which the surviving spouse was entitled to the income for life and could appoint the corpus. See Pipe's Estate v. Commissioner, 241 F.2d 210 (2d Cir. 1957), cert. denied, 355 U.S. 814 (legal life estate with power to consume; held, not the equivalent of trust). The provision was amended in 1954 to embrace non-trust transfers, provided the surviving spouse received a life estate and a power of appointment. By §93 of the Technical Amendments Act of 1958, the 1954 change was made retroactively applicable to the original enactment (1948) of the marital deduction, with the result that the non-trust transfer in Piatt v. Gray could qualify, although the decedent died in 1953. — Ed.

The language referred to in this report relied upon by the district court was not included in the act as finally adopted. No reliance can therefore be placed upon this portion of the report in interpreting the act.

It is apparent, therefore, that the appellants' reliance upon the district court's decision in *Lincoln Rochester Trust* and upon House Report 1027 was misplaced.

The cases upon which appellants rely in support of their claim for the allowance of a marital deduction are distinguishable as involving bequests which granted to the surviving spouse in those cases powers of disposition of much broader scope than those granted to the widow in the case at bar. See Boyd v. Gray, D.C., 175 F. Supp. 57; Stallworth's Estate v. Commissioner, 5 Cir., 260 F.2d 760; McGehee v. Commissioner, 5 Cir., 260 F.2d 818; Hoffman v. McGinnes, 3 Cir., 277 F.2d 598. In all of the last cited cases the courts held that the widow had unlimited power to invade the corpus which was exercisable by her alone and in all events. Here the widow's power was exercisable by her alone but it was not unlimited or exercisable in all events. . . .

Under her husband's will Mrs. Piatt received a legal life estate in the residue of his personal property with remainder over to the husband's sister. The surviving widow was given the right to expend all or any part of such personal property whenever in her opinion "it shall be necessary for her maintenance, comfort or well being without being required to account therefor," and the further right to sell, lease, encumber or otherwise dispose of any and all items of personal property and to give any purchaser a good fee simple title thereto. The power of appointment requirement referred to in [§2056(b)(5)] which must be exercised by the surviving spouse alone and in all events is defined variously in the Treasury Regulations as:

A power so to appoint fully exercisable in her own favor at any time following the decedent's death (as for example an unlimited power to invade).

or

The power of the surviving spouse must be a power to appoint the entire estate or a specific portion of it as unqualified owner . . . or to appoint the entire interest or a specific portion of it as a part of her estate . . . that is in effect to dispose of it to whomever she pleases. [Regs. §20.2056(b)-5(g)(1)(i) and (g)(2).]

Regs. [§20.2056(b)-5(g)(3)] enumerates the conditions under which the power is not exercisable in all events. In pertinent part this subsection provides:

Further, a power is not "exercisable in all events" if it may be exercised for a limited purpose only . . . Likewise, if there are any restrictions, either by the terms of the instrument or under applicable local law, on the exercise of a power to consume property (whether or not held in trust) for the benefit of the spouse, the power is not exercisable in all events. Thus, if a power of invasion is exercisable only for the spouse's support, or only for her limited use, the power is not exercisable in all events. In order for a power of invasion to be exercisable in all events, the surviving spouse must have the unrestricted power exercisable at any time during her life to use all or any part of the property subject to the power, and to dispose of it in any manner, including the power to dispose of it by gift (whether or not she has power to dispose of it by will).

It requires no unusual powers of discernment to perceive that the relevant statutory provisions and Treasury Regulations applicable to Item III of the testator's will demonstrate clearly that absent local law compelling a contrary conclusion, the surviving spouse did not possess such an unlimited power to invade the corpus of the estate that she is able to appoint herself in all events as an unqualified owner. Nor does she possess the power to dispose of the property by gift.

(B)

The specific legal interest created by the testator is dependent upon the law of the local jurisdiction. Helvering v. Stuart, 317 U.S. 154; Morgan v. Commissioner, 309 U.S. 78.

Appellants cite and rely upon cases decided under the law of Kentucky in which, as they contend, language similar to the terms of the Piatt will was construed as conferring upon the surviving spouse the power to appoint the corpus to herself or to her estate. At least three of such cases, however, are not fairly comparable to the case at bar. In Boyd v. Gray, D.C., 175 F. Supp. 57, 60, the bequest to the widow was of "all of the residue of my property . . . to be used, enjoyed and disposed of by her in any way she may choose." (See also Boyd v. Gray, 162 F. Supp. 307.) In Moore v. Morris, Ky., 258 S.W.2d 908, the widow was granted the power, inter alia, ". . . to sell and dispose of any of said property during her lifetime and to use the proceeds as she may see fit." In Snyder v. United States, D.C., 203 F. Supp. 195, the bequest to the widow was of "all the rest and residue of my estate . . . for and during her life with power of disposition over both the principal thereof and the income received thereform, in such manner as she may see fit." The unfettered powers of disposition bestowed upon the surviving spouses in the above cited cases is in marked contrast to the limited power of disposition conferred upon the widow in the case at bar. Mrs. Piatt did not possess the power to dispose of the property as she might see fit. She was empowered to dispose of the property only when in her opinion it was necessary for her maintenance, comfort or well-being to do so. Despite the fact that she was not required to account to any one, it was expected that the widow would exercise her discretion honestly. . . .

No definite set of principles or guide lines to aid in construction of wills emerge from an examination of the cases cited above. A few of the cases shed light upon the issue to be determined but by and large the Court must rely upon its own interpretation of the language of the will in controversy. To ascertain the intention of the testator from the language used by him is still the cardinal rule of construction. Hanks v. McDanell, 307 Ky. 243. Piatt bequeathed the residue of his personal property to his wife for her natural life with power "whenever in her opinion it shall be necessary for her maintenance, comfort or well-being to expend all or any part of the principal without being required to account therefor together with the further right and power to sell, encumber or otherwise dispose of any and all items of personal property belonging to me and to give any purchaser a good fee simple title thereto." The power of disposition is linked to the power to expend and obviously was designed to enable the surviving spouse to implement the power to use and consume that portion of the personal estate which she considered necessary for her maintenance, comfort or well-being. She was not authorized to dispose of the property "as she may see fit" or "as she may choose" or by words of similar import. She was authorized to give a good title to "any purchaser" but was not granted authority to give good title to a donee. Having reserved and exercised the right to dispose of the property by will, it is unreasonable to assume that the testator would intend that his widow could give the property away. A gift of property by the surviving spouse would have been a fraud on the testator and upon his sister who was entitled to receive the remainder of the property after Mrs. Piatt's death. . . .

Marital deductions have been denied in numerous cases from jurisdictions outside Kentucky where the facts were similar to those at bar, of which the following are representative: Estate of Semmes v. Commissioner, 288 F.2d 664 (C.A. 6th); In re Tarver's Estate v. C.I.R., 255 F.2d 913 (C.A. 4th); Commissioner v.

Ellis' Estate, 252 F.2d 109 (C.A. 3rd); May's Estate v. Commissioner, 283 F.2d 853 (C.A. 2d); United States v. Lincoln Rochester Trust Co., 297 F.2d 891 (C.A. 2), cert. den. 369 U.S. 887.

For the reasons hereinabove assigned, the judgment of the District Court is affirmed.

NOTE

1. *Life estate with power to consume.* In Field's Estate v. Commissioner, 40 T.C. 802 (1963), the Tax Court held that a surviving spouse's power under a trust "to consume my entire estate for any purposes which she shall deem advisable," which was construed by the local probate court to include the power to dispose of the property by gift, did not qualify for the marital deduction:

> We are not unmindful of the fact that the decree of the Probate Court construed the will to give [the surviving spouse] the unrestricted power to dispose of the trust property in any manner, "including the power to dispose of it by gift," and that there is some inference from language in the opinions in decided cases and the language in the last sentence of section 20.2056(b)-5(g)(3), Estate Tax Regs., that the inclusion of the power to dispose of the trust corpus by gift raises an otherwise limited power of invasion to an unlimited power to invade and thus qualifies the spouse's interest as a life estate with power of appointment under section 2056(b)(5) of the Code. We have found no cases which so hold and we think the language used in the regulations pertains only to whether a power of invasion is exercisable "in all events." While a power to dispose of by gift may be a prerequisite to qualify a power of appointment as one exercisable by the spouse "in all events," it does not follow that the power to dispose of trust corpus in any manner, including the power to dispose of it by gift, necessarily qualifies the spouse's interest as a life estate with power of appointment within the meaning of the statute. Under the language of the statute and section 20.2056(b)-5(g)(1), Estate Tax Regs., the interest of the spouse does not qualify for the marital deduction unless the spouse has the power to appoint the trust corpus to herself during her lifetime or to her estate at her death free of the trust. We do not find that either the will of the decedent in this case, as construed under Ohio law, or the decree of the Probate Court goes that far. [40 T.C. at 809-810.]

For a case in which the widow's power to consume property left to her by her husband was held to qualify the bequest for the marital deduction even though the testator provided for remainder interests in other persons on his widow's death, see Hoffman v. McGinnes, 277 F.2d 598 (3d Cir. 1960).

Why does this area give rise to so much litigation?

2. *"Marital deduction" trusts.* Section 2056(b)(5) lays down a pattern for the testator who wishes to leave property in trust for his surviving spouse without losing the marital deduction — the surviving spouse can be given the income for life, with a power (which must be exercisable by her alone and in all events) to appoint the corpus to herself or her estate. On the requirement of §2056(b)(5) that the surviving spouse must be "entitled for life to all the income . . . payable annually or at more frequent intervals," see Regs. §20.2056(b)-5(f), which deals with the effect of powers in the trustee to allocate receipts and charges between income and corpus, to retain unproductive property, to amortize bond premium, etc.; *State Street Trust Co.* case, supra page 1193; Burch, Use and Misuse of the Marital Deduction, 1963 So. Calif. Tax Inst. 609. As indicated supra page 1296n., a non-trust transfer will also qualify as a result of a statutory change in 1954; and see the *Gelb* case, infra page 1305, for the possibility of qualifying a "specific portion" of the transferred property if the surviving spouse is given the income from, and the right to appoint, that part.

A parallel provision, §2056(b)(6), permits the proceeds of insurance on the decedent's life to qualify for the marital deduction even though held by the insurance company under a settlement option, if the surviving spouse is entitled to payments of the principal or interest at annual or more frequent intervals, and can appoint the remaining amounts

payable under the contract. In Werbe's Estate v. United States, 273 F.2d 201 (7th Cir. 1959), it was held that certain minor restrictions on the surviving spouse's right to withdraw the amounts payable disqualified them because her power was not exercisable "in all events" within the meaning of §2056(b)(6). On similar facts, however, the deduction was allowed by the Tax Court in Jennings' Estate v. Commissioner, 39 T.C. 417 (1962), in which the Service has acquiesced (1964-17 I.R.B. 5).

If a testamentary trust does not provide for the periodic payment of income to the surviving spouse, but she has the unrestricted right to receive the corpus and accumulated income on demand, is the marital deduction allowable? In Halsted v. Commissioner, 28 T.C. 1069, 1074 (1957), the marital deduction was denied in computing the husband's gift tax on such a transfer, for want of a provision requiring the income to be paid "annually or at more frequent intervals" to his wife. (But see Regs. §25.2523(e)-1(f)(8), stating that the income requirement of §2523 is satisfied if the surviving spouse has "such command over the income that it is virtually hers.) In view of the wife's power to get the trust property on demand, however, has an "interest" in it been transferred to any other person?

3. *Relation of §2041 (powers of appointment) to marital deduction.* Will the unexpended portion of the assets in the *Piatt* case be includible in the widow's estate on her death? Should an affirmative answer to this question be a prerequisite to allowing a marital deduction to the husband's estate?

Consider the possibility that the surviving spouse's rights will not meet the requirements of §2056, even though they constitute a "general power of appointment" within the meaning of §2041, with the result that the unexpended property will be includible in her estate without generating an offsetting deduction for the husband's estate. One such possibility is suggested by the *Halsted* case, supra. Does *Field's Estate,* supra page 1299, suggest another disparity between §2041 and §2056? Does a power in the surviving spouse to appoint to her creditors or to the creditors of her estate, which is a general power of appointment under §2041, meet the test of §2056(b)(5) — "exercisable in favor of such surviving spouse, or of the estate of such surviving spouse"? See Snyder v. United States, 203 F. Supp. 195 (W.D. Ky. 1962) (power to appoint to donee's creditors taxable under §2041; dictum to effect that it would not qualify for marital deduction because donee could not "appoint to herself as unqualified owner"). Other disparities between the term "general power of appointment" as defined by §2041 and the type of power required by §2056(b)(5) arise from the fact that a §2056(b)(5) power must be vested solely in the surviving spouse and must be exercisable by her "in all events"; yet part of the appointive property subject to a joint power may be taxable under §2041(b)(1)(C)(iii), and a power may be subject to some limitations and yet be taxable because the standard is not within the exclusion of §2041(b)(1)(A).

Should the requirements of §2056(b)(5) and (6) be keyed more precisely to those of §2041(b) — or vice versa?

4. *"Terminable interests" — deductible and non-deductible.* The opinion in Piatt v. Gray is devoted almost entirely to the question whether the widow's life estate is embraced by §2056(b)(5). The inarticulate major premise of the opinion is that unless the conditions of §2056(b)(5) are satisfied, the widow's interest is a non-deductible "terminable interest" within the meaning of the general rule of §2056(b)(1) and hence cannot qualify for the marital deduction. Note the characteristics of a terminable interest set out in §2056(b)(1), especially (A) and (B) thereof. Were they present in Piatt v. Gray?

Patent, annuities, and rights to occupy property rent-free for a term of years are "terminable interests," since they will terminate on the lapse of time. Unless the conditions set out in subparagraphs (A) and (B) of §2056(b)(1) are satisfied, however, they can qualify for the marital deduction. See Regs. §20.2056(b)-1(c), and Examples (3), (5), and (6) of §20.2056(b)-1(g).

See also the last sentence of §2056(b)(1), disqualifying a terminable interest (even if otherwise qualified) if the decedent directs his executor or trustee to acquire it for his surviving spouse. Why is such an interest disqualified?

If the decedent's gross estate includes a non-deductible terminable interest that *could* be used to satisfy a bequest to the surviving spouse, its value must be applied against the value of otherwise qualified interests passing to her even if it is not so used. See §2056(b)(2).

5. *Elections against the will.* If the surviving spouse's interest under a will does not qualify for the marital deduction, as in Piatt v. Gray, can something be salvaged if she renounces the testamentary bequest and elects to take as in intestacy? If the elective share is otherwise qualified (i.e., if it constitutes a fee interest rather than a life estate), it rather than the disqualified testamentary bequest is considered as passing to the surviving spouse. Regs. §20.2056(e)-2(c); Harter v. Commissioner, 39 T.C. 511 (1962). If the alternative elective share would itself not qualify because it consists of a life estate in some or all of the decedent's property (e.g., common law dower), but it is commuted to a cash payment by agreement with the executor, is the deduction allowable? In United States v. Hiles. 318 F.2d 56 (5th Cir. 1963), and cases there cited, the deduction was allowed. Does *Stapf* contain intimations to the contrary?

6. *Payments to surviving spouse in settlement of will contest.* According to the Regulations, a payment to a surviving spouse in settlement of a will contest will be regarded as having "passed from the decedent to his surviving spouse" if it was a "bona fide recognition of enforceable rights of the surviving spouse in the decedent's estate." Regs. §20.2056(e)-2(d)(2); see also Indiana Nat. Bank v. United States, 191 F. Supp. 72 (S.D. Ind. 1961). If the surviving spouse receives $500,000 in settlement of a bona fide threat to contest a will under which she was to receive a life estate worth $100,000, does the *Stapf* case suggest that only $400,000 qualifies for the marital deduction?

Conversely, if a surviving spouse is compelled by a will contest to exchange an otherwise qualified interest for an unqualified interest, the marital deduction will be denied. Tebb's Estate v. Commissioner, 27 T.C. 671 (1957) (fee interest bequeathed to widow, but threatened will contest was settled by her agreement to use property only for her normal living expenses and to leave balance to stepchildren; held, marital deduction denied because her interest was terminable).

MEYER v. UNITED STATES

364 U.S. 410 (1960)

MR. JUSTICE WHITTAKER delivered the opinion of the Court.

Petitioners, who are executors of the estate of Albert F. Meyer, brought this suit to recover an alleged overpayment of federal estate taxes and the District Court granted the relief asked. 166 F. Supp. 629. The Court of Appeals reversed, 275 F.2d 83, and we granted the executors' petition for certiorari, 361 U.S. 929, because of a conflict of decisions in the circuits. Cf. In re Reilly's Estate, 239 F.2d 797, decided by the Court of Appeals for the Third Circuit.

Two policies of life insurance are involved, but since they are in all material respects identical, we need deal with only one of them. The policy obligated the insurer to pay a death benefit of $25,187.50, and that sum was included by the executors in the federal estate tax return and the tax thereon was paid. The decedent had selected an optional mode of settlement which provided for the payment of equal monthly installments to his wife for her life, with 240 installments guaranteed, and further provided that if the wife should die before receiving the 240 installments his daughter would receive the remainder of them, but if both the wife and the daughter died before receiving the 240 installments the commuted value of those unpaid was to be paid in one sum to the estate of the last one of them to die.

Of the total proceeds of the policy of $25,187.50, the insurer determined that $17,956.41 was necessary to fund the 240 monthly payments to the wife, the daughter, or to the estate of the last survivor of them, and that the remaining $7,231.09 was necessary to fund the monthly payments to the wife so long as she might live beyond the 240 months. Accordingly, the insurer made such entries on its books.

Thereafter petitioners, as executors, timely filed a claim for refund of the amount of the tax paid upon the $7,231.09 which the insurer had shown upon its books as necessary to fund the monthly payments to the wife for her actuarial ex-

pectancy beyond the 240 months certain, on the theory that the insurer's treatment of that sum on its books created a separate "property" or fund payable to the wife alone, and hence it qualified for the marital deduction under [§2056]. The claim was denied, and this suit was brought to recover the tax that had been paid on that sum.

Petitioners correctly concede that if the policy constitutes but one "property," within the meaning of the statute,[1] it would not qualify for the marital deduction because the wife's interest in it would be a "terminable" one, within the meaning of the statute, inasmuch as the wife may die before receipt of the 240 guaranteed installments, in which event the unpaid ones must go to the daughter if then living. They concede, too, that the $17,956.41, shown on the insurer's books as necessary to fund the monthly payments for the 240 months certain, does not qualify for the marital deduction for the same reasons. But they contend that, although the policy made no provision therefor, the insurer's bookkeeping entries constituted a real division of the insurance proceeds into, and created, two "properties" — one of $17,956.41 and the other of $7,231.09 — and that the latter qualifies for the marital deduction under the statute because it is payable, if at all, only to the wife — during her lifetime beyond the 240 months — and no other person has any interest in it.

Whether a policy of life insurance may create several "properties" or funds, either terminable or nonterminable or both, we need not decide, for we think the policy here involved constituted only one property, and made only so much of its proceeds payable to the wife as she might live to receive in equal monthly installments, and made any guaranteed balance payable to the daughter. Hence, under the terms of the policy, the "interest passing to the surviving spouse [may] terminate or fail" and a "person other than [the] surviving spouse . . . may possess or enjoy [a] part of such property after such termination or failure of the interest so passing to the surviving spouse; . . ." Therefore the policy and its proceeds — considered apart from petitioners' claim that the insurer's bookkeeping division of the proceeds of the policy into two parts created two "properties" — are disqualified for the marital deduction by the express provisions of [§2056(b)(1)]. The legislative history of the section further supports and compels this conclusion. Illustrating applications of the terminable interest rule, the Senate Committee Report gave an example that is in no relevant way distinguishable from this case,[2] and makes it very clear that the marital deduction is not allowable in the case of an annuity for the surviving spouse for life if "upon the death of the surviving

---

1 "The terms 'interest' and 'property,' as used in [§2056] have separate and distinct meanings. The term 'property' is used in a comprehensive sense and includes all objects or rights which are susceptible of ownership. The term 'interest' refers to the extent of ownership, that is, to the estate or the quality and quantum of ownership by the surviving spouse or other person, of particular property." S. Rep. No. 1013, Part 2, 80th Cong., 2d Sess., p. 4.

2 "*Example* (*2*). The decedent during his lifetime purchased an annuity contract under which the annuity was payable during his life and then to his spouse during her life if she survived him. The value of the interest of the decedent's surviving spouse in such contract at the death of the decedent is included in determining the value of his gross estate. A marital deduction is allowed with respect to the value of such interest so passing to the decedent's surviving spouse inasmuch as no other person has an interest in the contract. If upon the death of the surviving spouse the annuity payments were to continue for a term to her estate, or the undistributed portion thereof was to be paid to her estate, the deduction is nevertheless allowable with respect to such entire interest. *If, however, upon the death of the surviving spouse, the payments are to continue to another person* (*not through her estate*) *or the undistributed fund is to be paid to such other person, no marital deduction is allowable inasmuch as an interest passed from the decedent to such other person.*" (Emphasis added.) S. Rep. No. 1013, Part 2, 80th Cong., 2d Sess., pp. 12-13.

spouse, the payments are to continue to another person (not through her estate) or the undistributed fund is to be paid to such other person. . . ."

We think petitioners' argument — that the insurer's bookkeeping division of the proceeds of the policy into two parts created two properties — cannot withstand the provisions of the policy and the actual facts respecting the insurer's bookkeeping division of its proceeds, under the clear terms of the statute and its legislative history. The policy made no provision for the creation of two separate properties — one a property sufficient to provide payments for 240 months, to the wife while she lived and any remainder to the daughter, and another property sufficient to provide an annuity to the wife for the period of her actuarial expectancy beyond the 240 months — and no such separate properties were in fact created. The allocations made were merely actuarial ones — mere bookkeeping entries — made by the insurer on its own books for its own convenience after the insured, the other party to the contract, had died. The wife and the daughter were, respectively, primary and contingent beneficiaries *of the policy* alone. Neither of them had any title to, nor right to receive, any special fund, and indeed none was actually created. The bookkeeping entries made by the insurer no more created or measured their rights than the insurer's erasure of those entries — which it was free to make at any time — would destroy their rights. Their rights derive solely from the policy. It, not the insurer's bookkeeping entries, created and constitutes the property involved. Any action by the beneficiaries to enforce their rights against the insurer would have to be upon the policy, not upon the entries the insurer had made on its books for its own actuarial information and convenience. Nor would exhaustion of the sum of those entries constitute any defense to the insurer against the claim of either beneficiary for amounts due her under the policy.

The proceeds of the policy were not payable to the wife (or to her estate or appointee) alone and at all events, but were payable in monthly installments to her for life, and if any obligation under the policy remained undischarged at her death it was payable to the daughter if living or, if not, to the estate of the last of them to die. It follows that the "interest passing to the surviving spouse [may] terminate or fail" and that a "person other than [the] surviving spouse . . . may possess or enjoy [a] part of such property after such termination or failure of the interest so passing to the surviving spouse; . . ." and hence the property is disqualified for the marital deduction by the express provisions of [§2056(b)(1)].

Affirmed.

Mr. Justice Douglas, with whom Mr. Justice Clark and Mr. Justice Brennan concur, dissenting.

The decedent had two life insurance policies in two separate companies; and each provided for the payment of the proceeds in 20 annual instalments by monthly payments to decedent's wife, Marion E. Meyer, if living, and thereafter during her lifetime. If the wife was not living at decedent's death, the instalments were to be paid to a daughter. If the wife died after decedent and before payment in full of the instalments, any remaining instalments were to be payable to the daughter. If the wife lived beyond the 20 years, she would be entitled to like monthly payments for her life. Decedent was survived by his wife and daughter, the wife being then 42 years old.

The insurance companies calculated the sums necessary to provide the designated monthly payments for 20 years: $17,956.41 in the case of one policy and $4,012.24 in the case of the other. They then computed the amount necessary to provide a monthly income to the wife in the event she lived beyond the 20-year period: $7,231.09 for one policy; $1,007.36 for the other.

Neither of the policies provided (and decedent did not request) that there be

any segregation of the proceeds between the amounts computable for the term certain and for funding of the contingent life annuity.[1] The amounts required to provide monthly payments for 20 years — $17,956.41 and $4,012.24 — were not claimed as marital deductions. This controversy concerns only the amount needed to fund the contingent life annuities of the wife — $7,231.09 plus $1,007.36, or $8,238.45, which the executors claim as a marital deduction.

Concededly the amount necessary to make the 20-year payments does not qualify as a marital deduction because it may "terminate or fail" within the meaning of the Code, the daughter being entitled to any remaining payments during that term should the wife die before it terminates. The daughter, however, has no *interest* in the annuities payable beyond the 20-year period. And it seems to me that the wife's "interest" in that part of the insurance contracts does not "terminate or fail" within the meaning of [§2056(b)(1)].

If the decedent had taken out *one group of policies* to pay instalments for 20 years to his wife or, if she died within that period, to his daughter, and *another group of policies* to pay instalments to his wife for life if she lived more than 20 years, the former would be nondeductible, but the latter would qualify for the marital deduction.[2] Does then the continuation of the two types of insurance in one policy change the result? The Government maintains that it does because in its view the entire insurance proceeds of each policy are a single "property" as that term is used in the statute; and the Court so holds. Yet, with all deference, that conclusion is wide of the mark.

The Senate Report states that terminable *interests* include all *interests* that are subject to contingencies and conditions. Yet these contingencies and conditions are not all-inclusive. They do not include the death of the transferee. And, as I shall show, contingencies of the kind we have here are not included.

The Court, with all deference, errs in making its decision turn on whether the wife's *interest* after the 20-year term is a separate "property" within the meaning of the statute. The ruling of the Court is on a statutory provision that does not exist. Under the statute the question is not whether "property" is terminable; it is whether an "interest" is terminable. The statute indeed draws a marked distinction between "property" and "interest." Section [2056(a)] speaks not of "property," but of any "interest" in property. Section [§2056(b)] speaks only of an "interest passing to the surviving spouse" that will "terminate or fail." The statute at these points is concerned with "interest" in property — not with "property." Yet the Court, disregarding the statutory scheme, looks only to "property" and finding but one insurance policy denies the deduction.

Plainly there may be more than one "interest" in a single "property." A deduction is not denied merely because the surviving spouse and someone else each have an "interest" in the same "property." S. Rep. No. 1013, 80th Cong., 2d Sess., Pt. 2, p. 8. The Senate Committee gave several examples: ". . . if the decedent by his will devises Blackacre to his wife and son as tenants in common, the marital deduction is allowed, since the surviving spouse's interest is not a terminable interest."

There seems to me to be a like separation of *interests* in the present case. These

[1] It was said, however, on oral argument the insurance companies maintained for their own records separate accounts as to the 20-year monthly income provisions and the contingent life annuity of the wife, without any segregation of funds.

[2] The Court of Appeals in *In re Reilly's Estate,* supra, correctly noted that the purpose of the marital deduction under this Act was "to make more nearly uniform the tax treatment of married persons in community property and non-community property states." Id., at 799. The assets not taxable in the estate of the first spouse to die may be taxed at the death of the survivor. In other words, the property in the marital community is subject to the tax only once in the estate of either.

insurance policies created, of course, no fund or res. The sum of $21,968.65 representing the wife's terminable *interest* and the $8,238.45 representing her other *interest* were, of course, no more segregated in the insurance companies' assets than a customer's checking account is segregated in a commercial bank. Yet that seems immaterial. Each represented a chose in action. The wife or daughter, as the case might be, could sue for the one during the 20-year period. Only the wife could enforce the claim here in question.

That the proceeds of one life insurance policy may create two or more "interests" for purposes of the estate tax is implicit in the Senate Report. Thus one example of a marital deduction that is given is an annuity payable to the decedent during his life and to his spouse during her life if she survived him.

> The decedent during his lifetime purchased an annuity contract under which the annuity was payable during his life and then to his spouse during her life if she survived him. The value of the interest of the decedent's surviving spouse in such contract at the death of the decedent is included in determining the value of his gross estate. A marital deduction is allowed with respect to the value of such interest so passing to the decedent's surviving spouse inasmuch as no other person has an interest in the contract. If upon the death of the surviving spouse the annuity payments were to continue for a term to her estate, or the undistributed portion thereof was to be paid to her estate, the deduction is nevertheless allowable with respect to such entire interest. If, however, upon the death of the surviving spouse, the payments are to continue to another person (not through her estate) or the undistributed fund is to be paid to such other person, no marital deduction is allowable inasmuch as an interest passed from the decedent to such other person. Id., pp. 12-13.

The last sentence of the foregoing quotation, on which the Court relies, describes with accuracy the terminable "interest" of the wife in that part of the annuity payable during the 20-year period after the death of the decedent. It has no relevancy to the "interest" with which we are here concerned, viz., the instalments payable after that 20-year period.

My conclusion is that where the "interest" that accrues to the surviving spouse is, as here, shared with no one else and is subject to no termination except her own death, it qualifies for a marital deduction under this statute, even though another "interest" of hers in the same annuity contract would not qualify.

GELB v. COMMISSIONER

298 F.2d 544 (2d Cir. 1962)

Before CLARK, FRIENDLY and KAUFMAN, Circuit Judges.

FRIENDLY, Circuit Judge.

The executors under the will of Harry Gelb petition for review of a decision of Judge Opper in the Tax Court, 19 T.C.M. 987, which sustained the Commissioner's determination that a residuary trust created by the will did not qualify for the marital deduction. We agree that no deduction was warranted under §812(e)(1)(F) of the Internal Revenue Code of 1939, which was in effect at Gelb's death. However, we hold that a "specific portion" of the trust qualified for the deduction under the retrospective amendment of that section made by §93(a) of the Technical Amendments Act of 1958, 72 Stat. 1606, 1668.

I

The critical provisions of the residuary clause of the will, executed May 27, 1953, are set out in the margin.[1] At the date of Gelb's death, November 16, 1953,

[1] "FIFTH: All the rest, residue and remainder of my property, whether real or personal, and wheresoever situated which I may own or to which I may be entitled at the time of my death, I

the governing statute, cited above, provided that "an interest in property passing from the decedent in trust" should qualify for the marital deduction "if under the terms of the trust his surviving spouse is entitled for life to all the income from the corpus of the trust, payable annually or at more frequent intervals, with power in the surviving spouse to appoint the entire corpus free of the trust (exercisable in favor of such surviving spouse, or of the estate of such surviving spouse, or in favor of either, whether or not in each case the power is exercisable in favor of others), and with no power in any other person to appoint any part of the corpus to any person other than the surviving spouse." The statute added that the provision "shall be applicable only if, under the terms of the trust, such power in the surviving spouse to appoint the corpus, whether exercisable by will or during life, is exercisable by such spouse alone and in all events."

There is no doubt that the residuary trust would fit the statute save for the paragraph with respect to Claire. We find no merit in the Commissioner's contention that this provision violated the requirement that the surviving spouse must be "entitled for life to all the income from the corpus of the trust." The language of the will is plain that the provision in regard to Claire was an additional power to invade corpus, not one to divert income from the widow; if the language were ambiguous, which it is not, the fact that the trust income ranged only from some $3000 to $3500 a year, a probability hardly unknown to the testator, would be determinative in taxpayers' favor. However, the Commissioner and the Tax Court were right that the provision infringed the requirement that there must be "no power in any other person to appoint any part of the corpus to any person other than the surviving spouse," and the converse that the power of the surviving spouse to appoint the entire corpus must be "exercisable by such spouse alone and in all events."

[The court concluded that Claire possessed an enforceable right to receive payments from the trust when the conditions contemplated by the decedent occurred, and that the surviving spouse, even if she were a trustee when the standard was met, could not properly prevent the making of such payments.]

---

give, devise and bequeath to my Trustees hereinafter named IN TRUST nevertheless, to invest, reinvest, and keep the same invested for and during the life of my beloved wife, ROSE GELB, and to collect and pay over to her during her life, in monthly installments, the net income therefrom. In the event that the net income payable to my beloved wife during any year shall amount to less than Ten Thousand ($10,000.00) Dollars, I direct my Trustees to draw upon the principal of the trust fund to the extent of such deficit, and pay such difference to my beloved wife, it being my intent that my beloved wife shall receive at least the sum of Ten Thousand ($10,000.00) Dollars per year in installments of Eight Hundred Thirty-Three and 33/100 ($833.33) Dollars per month from my estate during her life." . . .

"I particularly wish to provide for the support and education of my youngest daughter, CLAIRE LILA GELB. Accordingly, I direct that if, in any year or years, my individual Trustees desire funds from said trust fund to provide for the education, maintenance and upbringing of my said youngest daughter, CLAIRE LILA GELB, then upon application of my individual Trustees, in their sole discretion, my Executors and Trustees are hereby directed to pay to my beloved wife such sums as such individual Trustees shall in writing request, not exceeding the sum of Five Thousand ($5,000.00) Dollars per year and I authorize my individual Trustees to apply said sums so requested and paid for the proper support, maintenance, education and up-bringing of my said daughter, CLAIRE LILA GELB. The receipt of my individual Trustees for such sums shall constitute an acquittance therefor. The said payments referred to in this numbered paragraph shall be in addition to all other payments provided for by this Will to be made during the lifetime of my said wife." . . .

"Upon the death of my said wife, my Trustees are directed to pay over and distribute the then corpus of this trust, to her estate or to any persons or corporations, in such estates, interest and proportions, either outright or in trust and in such manner, without any restriction or limitation whatsoever, as my said wife shall validly appoint by her Last Will and Testament. In default of such valid appointment, the then corpus shall, upon the death of my said wife, be distributed outright or in trust as provided for in paragraph 'SIXTH' of my said Will, as though my wife had predeceased me."

II

The provision of the Internal Revenue Code of 1954, §2056(b)(5), with respect to the qualification for the marital deduction of trusts for the surviving spouse, altered the previous law in an important way. Under the earlier statute, unless a trust qualified in whole, no part of it did. The 1954 Code introduced a new concept — a qualifying "specific portion." Section 93(b) of the Technical Amendments Act of 1958, 72 Stat. 1606, passed after the petition here had been filed in the Tax Court but long prior to the decision, made the new dispensation applicable to estates of decedents who had died after April 1, 1948 and before August 17, 1954, when the provision of the 1954 Code took effect; . . . However, neither the counsel who represented taxpayers in the Tax Court, the Commissioner, nor the Court itself, considered the effect of the amendment, as the Commissioner now properly concedes must be done.

Counsel representing the taxpayers in this court contends that if we reject his argument as to the entire trust, at least "a specific portion" qualifies for the marital deduction — namely, so much of the corpus as could not be diverted to Claire, the latter amount equalling the present value of $5,000 multiplied by Rose's expectancy (more accurately by Rose's and Claire's joint expectancy). The Commissioner says this is not what Congress meant by "a specific portion." He points to the example given in all the Congressional reports, both as to the 1954 Code and the 1958 amendment, namely, that if a testator leaves his spouse the annual income from one-half of the property, and gives her a power of appointment over one-half the property, then one-half the value of the property is deductible. He points also to the reports on the 1954 Code which said "The bill makes it clear . . . that a right to income plus a general power of appointment over only an undivided part of the property will qualify that part of the property for the marital deduction." H. Rep. No. 1337, S. Rep. No. 1622, and to the Senate report on the 1958 Act, S. Rep. No. 1983, which said "Your committee, therefore, has amended the House bill to add a provision to conform the marital deduction provisions of the 1939 Code with the more realistic rules of the 1954 Code." He urges still more vigorously the language of the Regulations, first adopted as §20.2056 (b)-5(c) under the 1954 Code . . . and later made applicable to estates entitled to the benefit of the 1958 amendment to the 1939 Code. . . .

The Commissioner does not argue that the divergence between the extent of Rose's right to income and her power to appoint prevents her interest from constituting a "specific portion." One of the purposes of the 1958 amendment was to remedy the situation under the 1939 Code wherein the deduction was lost altogether unless both these factors were 100%, S. Rep. No. 1983, 85th Cong., 2d Sess., and the Commissioner has recognized that "While the rights over the income and the power must coexist as to the same interest in property, it is not necessary that the rights over the income or the power as to such interest be in the same proportion," Regulations 105, §81.47a(c)(2), added by T.D. 6529 [1961-1 C.B. 753, 768], the deduction being limited to whichever is smaller as between the share over which the power to appoint corpus extends and that to which the income rights pertain. The Commissioner's argument is rather that here even the smaller portion, that over which the right to appoint corpus extends, does not qualify because it is not the "fractional or percentile share" demanded by [Regs. §20.2056(b)-5(c)].

We fail to comprehend why a life interest in a residuary trust which at testator's death amounted to $200,000 and a qualifying power to appoint $100,000 out of it, or a life interest in such a trust and a qualifying power to appoint all

but $100,000 out of it, do not relate to a "specific portion," namely, $100,000, quite as much as if the testator had used a fraction or a percentage with respect to the power over corpus. Example (1) [of Regs. §20.2056(b)-5(c)] says the reason why a trust where the spouse has been given a qualifying power over a specified dollar amount does not meet the statutory test is that "there is no certainty that the value" of the entire corpus "will be the same on the date of the surviving spouse's death as it was on the date of the decedent's death," so that a specific dollar amount fails to meet the Regulations' stricture that the widow's share must reflect "its proportionate share of the increment or decline in the whole of the property" in trust. This elaboration of the statutory language seems to bespeak a desire that the risk of change in value, up or down, should be shared equally by the spouse and the Government. True, when the power is to draw a specific dollar amount the spouse bears no risk of change in the value of the corpus, unless, indeed, it shrinks below the dollar figure; and when the power is over all the corpus except a named dollar amount, the spouse is saddled with a disproportionate risk. However, Congress spoke of a "specific portion," not of a "fractional or percentile share," and nowhere indicated any policy that deductibility of a "specific portion" should be governed by the possibility that the spouse's portion will change in value relatively more or less than the clearly nonqualifying part. Neither has the Commissioner given us any reason why this should be so. A basic purpose of the marital deduction was to reduce the discrimination against taxpayers not in community property states, S. Rep. No. 1013, 80th Cong., 2d Sess., in 1948-1 C.B. at pp. 305-306; see Commissioner v. Estate of Ellis, 252 F.2d 109, 112 (3 Cir. 1958). The liberalization in the provision as to trusts, made in the 1954 Code and applied to earlier years by the Technical Amendments Act, was evidently designed to permit certain normal testamentary dispositions without the total forfeiture of the deduction that the 1939 Code had occasioned in some instances. That Congress gave a fractional interest as an example of a "specific portion" does not warrant a construction that Congress did not mean to include other instances fairly within the language and the underlying policy. We disapprove [Regs. §20.2056(b)-5(c)] insofar as it would limit a "specific portion" to "a fractional or percentile share."

However, the taxpayers here encounter an added difficulty. Rose's qualifying power was not over the entire corpus less a sum described in dollars, but over all less a sum which can at best be estimated by actuarial calculations. It is surely arguable that in the latter case the power is not exercisable over a "specific portion" even though in the former it is — the joint lives of Rose and Claire might differ substantially from their actuarial expectancy. Yet the use of actuarial tables for dealing with estate tax problems has been so widespread and of such long standing that we cannot assume Congress would have balked at it here; the United States is in business with enough different taxpayers so that the law of averages has ample opportunity to work.

The case is remanded to the Tax Court to determine how much of the residuary trust qualifies for the marital deduction under the principles herein stated. The Court should consider whether the power in respect to Claire is not a qualifying power to the extent that it is exercisable during her minority, Regulations [§20.2056(b)-5(j), providing that a power to distribute corpus to the surviving spouse for the support of minor children will not disqualify the trust if she is legally obligated to support them.]

NOTE

"Specific portion." Compare the interpretation of the term "the property" in §2503(c) in the *Herr* case, supra page 1065.

JACKSON v. UNITED STATES

376 U.S. 503 (1964)

MR. JUSTICE WHITE delivered the opinion of the Court.

Since 1948 [§2056(a)] has allowed a "marital deduction" from a decedent's gross taxable estate for the value of interests in property passing from the decedent to his surviving spouse. [Section 2056(b)] adds the qualification, however, that interests defined therein as "terminable" shall not qualify as an interest in property to which the marital deduction applies. The question raised by this case is whether the allowance provided by California law for the support of a widow during the settlement of her husband's estate is a terminable interest.

Petitioners are the widow-executrix and testamentary trustee under the will of George Richards who died a resident of California on May 27, 1951. Acting under the Probate Code of California, the state court, on June 30, 1952, allowed Mrs. Richards the sum of $3,000 per month from the corpus of the estate for her support and maintenance, beginning as of May 27, 1951, and continuing for a period of 24 months from that date. Under the terms of the order, an allowance of $42,000 had accrued during the 14 months since her husband's death. This amount, plus an additional $3,000 per month for the remainder of the two-year period, making a total of $72,000, was in fact paid to Mrs. Richards as widow's allowance.

On the federal estate tax return filed on behalf of the estate, the full $72,000 was claimed as a marital deduction under [§2056]. The deduction was disallowed, as was a claim for refund after payment of the deficiency, and the present suit for refund was then brought in the District Court. The District Court granted summary judgment for the United States, holding, on the authority of Cunha's Estate v. Commissioner, 279 F.2d 292, that the allowance to the widow was a terminable interest and not deductible under the marital provision of the Internal Revenue Code. The Court of Appeals affirmed, 317 F.2d 821, and we brought the case here because of an asserted conflict between the decision below and that of the Court of Appeals for the Fifth Circuit in First National Bank & Trust Co. of Augusta v. United States, 297 F.2d 312. 375 U.S. 894. For the reasons given below, we affirm the decision of the Court of Appeals.

In enacting the Revenue Act of 1948 with its provision for the marital deduction, Congress left undisturbed §812(b)(5) of the 1939 Code, which allowed an estate tax deduction, as an expense of administration, for amounts "reasonably required and actually expended for the support during the settlement of the estate of those dependent upon the decedent." As the legislative history shows, support payments under §812(b)(5) were not to be treated as part of the marital deduction allowed by [§2056]. The Revenue Act of 1950, however, repealed §812-(b)(5) because, among other reasons, Congress believed the section resulted in discriminations in favor of States having liberal family allowances.[1] Thereafter

[1] The legislative history states: "In practice [the support allowance deduction] has discriminated in favor of estates located in States which authorize liberal allowances for the support of dependents, and it has probably also tended to delay the settlement of estates." S. Rep. No. 2375, 81st Cong., 2d Sess., p. 57.

allowances paid for the support of a widow during the settlement of an estate "heretofore deductible under section 812(b) will be allowable as a marital deduction subject to the conditions and limitations of [§2056]." S. Rep. No. 2375, 81st Cong., 2d Sess., p. 130.

The "conditions and limitations" of the marital deduction under [§2056] are several but we need concern ourselves with only one aspect of [§2056(b)(1)], which disallows the deduction of "terminable" interests passing to the surviving spouse. It was conceded in the Court of Appeals that the right to the widow's allowance here involved is an interest in property passing from the decedent within the meaning of [§2056(e)], that it is an interest to which the terminable interest rule of [§2056(b)(1)] is applicable, and that the conditions set forth in [(A) and (B) of §2056(b)(1)] were satisfied under the decedent's will and codicils thereto. The issue, therefore, is whether the interest in property passing to Mrs. Richards as widow's allowance would "terminate or fail" upon the "lapse of time, upon the occurrence of an event or contingency, or upon the failure of an event or contingency to occur."

We accept the Court of Appeals description of the nature and characteristics of the widow's allowance under California law. In that State, the right to a widow's allowance is not a vested right and nothing accrues before the order granting it. The right to an allowance is lost when the one for whom it is asked has lost the status upon which the right depends. If a widow dies or remarries prior to securing an order for a widow's allowance, the right does not survive such death or remarriage. The amount of the widow's allowance which has accrued and is unpaid at the date of death of the widow is payable to her estate but the right to future payments abates upon her death. The remarriage of a widow subsequent to an order for an allowance likewise abates her right to future payments. 317 F.2d 821, 825.

In light of these characteristics of the California widow's allowance, Mrs. Richards did not have an indefeasible interest in property at the moment of her husband's death since either her death or remarriage would defeat it. If the order for support allowance had been entered on the day of her husband's death, her death or remarriage at any time within two years thereafter would terminate that portion of the interest allocable to the remainder of the two-year period. As of the date of Mr. Richards' death, therefore, the allowance was subject to failure or termination "upon the occurrence of an event or contingency." That the support order was entered in this case 14 months later does not, in our opinion, change the defeasible nature of the interest.

Petitioners ask us to judge the terminability of the widow's interest in property represented by her allowance as of the date of the Probate Court's order rather than as of the date of her husband's death. The court's order, they argue, unconditionally entitled the widow to $42,000 in accrued allowance of which she could not be deprived by either her death or remarriage. It is true that some courts have followed this path, but it is difficult to accept an approach which would allow a deduction of $42,000 on the facts of this case, a deduction of $72,000 if the order had been entered at the end of two years from Mr. Richards' death and none at all if the order had been entered immediately upon his death. Moreover, judging deductibility as of the date of the Probate Court's order ignores the Senate Committee's admonition that in considering terminability of an interest for purposes of a marital deduction "the situation is viewed as at the date of the decedent's death." S. Rep. No. 1013, 80th Cong., 2d Sess., Part 2, p. 10. We prefer the course followed by both the Court of Appeals for the Ninth Circuit in *Cunha's Estate,* supra, and by the Court of Appeals for the Eighth Circuit in United States v. Quivey, 292 F.2d 252. Both courts have held the date of death

of the testator to be the correct point of time from which to judge the nature of a widow's allowance for the purpose of deciding terminability and deductibility under [§2056]. This is in accord with the rule uniformly followed with regard to interests other than the widow's allowance, that qualification for the marital deduction must be determined as of the time of death.[2]

Our conclusion is confirmed by [§2056(b)(3)] which saves from the operation of the terminable interest rule interests which by their terms may (but do not in fact) terminate only upon failure of the widow to survive her husband for a period not in excess of six months. The premise of this provision is that an interest passing to a widow is normally to be judged as of the time of the testator's death rather than at a later time when the condition imposed may be satisfied; hence the necessity to provide an exception to the rule in the case of a six months' survivorship contingency in a will. A gift conditioned upon eight months' survivorship, rather than six, is a nondeductible terminable interest for reasons which also disqualify the statutory widow's allowance in California where the widow must survive and remain unmarried at least to the date of an allowance order to become indefeasibly entitled to any widow's allowance at all.

Petitioners contend, however, that the sole purpose of the terminable interest provisions of the Code is to assure that interests deducted from the estate of the deceased spouse will not also escape taxation in the estate of the survivor. This argument leads to the conclusion that since it is now clear that unless consumed or given away during Mrs. Richards' life, the entire $72,000 will be taxed to her estate, it should not be included in her husband's. But as we have already seen, there is no provision in the Code for deducting all terminable interests which become nonterminable at a later date and therefore taxable in the estate of the surviving spouse if not consumed or transferred. The examples cited in the legislative history make it clear that the determinative factor is not taxability to the surviving spouse but terminability as defined by the statute. Under the view advanced by petitioners all cash allowances actually paid would fall outside [§2056(b)(1)]; on two different occasions the Senate has refused to give its approval to House-passed amendments to the 1954 Code which would have made the terminable interest rule inapplicable to all widow's allowances actually paid within specified periods of time.

We are mindful that the general goal of the marital deduction provisions was to achieve uniformity of federal estate tax impact between those States with community property laws and those without them. But the device of the marital deduction which Congress chose to achieve uniformity was knowingly hedged with limitations, including the terminable interest rule. These provisions may be imperfect devices to achieve the desired end, but they are the means which Congress chose. To the extent it was thought desirable to modify the rigors of the terminable-interest rule, exceptions to the rule were written into the Code. Courts should hesitate to provide still another exception by straying so far from the statutory language as to allow a marital deduction for the widow's allowance provided by the California statute. The achievement of the purposes of the marital deduction is dependent to a great degree upon the careful drafting of wills; we have no fear that our decision today will prevent either the full utilization of the marital deduction or the proper support of widows during the pendency of an estate proceeding.

Affirmed.

MR. JUSTICE DOUGLAS dissents.

[2] Bookwalter v. Lamar, 323 F.2d 664 (C.A. 8th Cir.); United States v. Mappes, 318 F.2d 508 (C.A. 10th Cir.); Commissioner v. Ellis' Estate, 252 F.2d 109 (C.A. 3d Cir.); Starrett v. Commissioner, 223 F.2d 163 (C.A. 1st Cir.); Estate of Sbicca v. Commissioner, 35 T.C. 96.

NOTE

1. *Widows' allowances.* As a result of a 1961 amendment, a widow's (or widower's) allowance in Connecticut "shall vest in [the survivor] upon the death of his spouse and shall not terminate with his subsequent death or remarriage." Is this sufficient to qualify the allowance for the marital deduction? Note that the purpose of the allowance is to support the surviving spouse during administration of the estate and that its amount depends upon the probate judge's estimate of the time required for administration. Are these disqualifying conditions under §2056(b)(1)? What would be the effect of an order under the Connecticut statute directing the executor to pay the widow $100 weekly until the estate is finally settled? See Second Nat. Bank of New Haven v. United States, 222 F. Supp. 446 (D. Conn. 1963) (dictum, 1961 Connecticut amendment qualifies); Note, The Widow's Allowance and the Marital Deduction, 77 Harv. L. Rev. 533 (1964) (published prior to *Jackson* case); Mahon, The Widow's Allowance and the Federal Tax Laws, 41 Taxes 692 (1963) (re income tax results of widow's allowance to estate and to recipient).

2. *Transfers to spouse conditioned on surviving to a specified time.* Section 2056(b)(3) provides that an interest is not to be considered as terminable solely because it will fail if the surviving spouse dies within 6 months of the decedent's death or in a common disaster (provided the event does not occur), but other conditions of survivorship may be fatal. Thus, in Bookwalter v. Lamar, 323 F.2d 664 (8th Cir. 1963), it was held that a bequest to the decedent's widow conditioned on her surviving administration of his estate created a non-qualified terminable interest. A similar clause was held non-terminable in Kellar v. Kasper, 138 F. Supp. 738 (D.S.D. 1956), however, on the ground that under local law, title was indefeasibly vested in the widow at the time of the husband's death. The court found that the language of the will was "ambiguous" but that the testator, "astute lawyer that he was, can be presumed to have understood the marital deduction provision of the law, and the record shows that he redrew his will for the sole purpose of taking advantage of such marital deduction," and held that weight must be given to this purpose in construing the language of the will.

In Rev. Rul. 54-121, 1954-1 C.B. 196, the Internal Revenue Service ruled that insurance proceeds received by the decedent's widow would not qualify for the marital deduction if she was to take only if alive when the insurance company received due proof of the insured's death, since that might occur more than six months after his death. But see Eggleston v. Dudley, 257 F.2d 398 (3d Cir. 1958), holding that under local law, taking into account the intent of the insured, such a clause created a vested rather than terminable interest, so as to qualify for the marital deduction.

See also Starrett v. Commissioner, 223 F.2d 163 (1st Cir. 1955) (surviving spouse's power to invade corpus of a trust of which she was the income beneficiary would terminate upon her legal incapacity or upon the appointment of a guardian of her person or property; held, although power would ordinarily be *suspended* during disability and interest would not be disqualified, the condition in dispute *terminated* the power upon disability, so that spouse's recovery would not restore her power of invasion — hence, interest is disqualified).

3. *Common disaster clauses and the "all events" requirement of §2056(b)(5) and (6).* Section 2056(b)(5) creates an exception to the terminable interest rule for trusts under which the surviving spouse is entitled to the income and can appoint the corpus (or a specific portion thereof) to himself or his estate, provided the power is exercisable "by such spouse alone and in all events." If the power is created by a will containing a common disaster clause, is the widow's power exercisable "in all events" in view of the fact that it will not come into play if she fails to survive the common disaster? A similar question arises under the "all events" test of §2056(b)(6), relating to life insurance proceeds. See Davis, Effect of a Time Delay Clause on the Marital Deduction Where Periodic Payments Must Qualify Under Section 2056(b)(5) or Section 2056(b)(6), 51 Ill. B.J. 752 (1963).

REV. PROC. 64-19

1964-15 I.R.B. 30

SECTION 1. PURPOSE.

The purpose of this Revenue Procedure is to state the position of the Internal Revenue Service relative to allowance of the marital deduction in cases where there is some uncertainty as to the ultimate distribution to be made in payment of a pecuniary bequest or transfer in trust where the governing instrument provides that the executor or trustee may satisfy bequests in kind with assets at their value as finally determined for Federal estate tax purposes.

SEC. 2. BACKGROUND.

.01 The Internal Revenue Service has received inquiries concerning the amount of the marital deduction which should be allowed for a pecuniary bequest in a will or for a transfer in trust of a pecuniary amount where the governing instrument not only provides that the executor or trustee may, or is required to, select assets in kind to satisfy the bequest or transfer, but also provides that any assets distributed in kind shall be valued at their values as finally determined for Federal estate tax purposes. The question is the same whether the amount of the bequest or transfer is determined by a formula fixing it by reference to the adjusted gross estate of the decedent as finally determined for Federal estate tax purposes, or its amount is determined in some other fashion by which a fixed dollar amount distributable to the surviving spouse can be computed. Any bequest or transfer in trust described in subsection 2.01 is hereinafter referred to as a "pecuniary bequest or transfer" for purposes of this Revenue Procedure.

.02 Where, by virtue of the duties imposed on the fiduciary either by applicable state law or by the express or implied provisions of the instrument, it is clear that the fiduciary, in order to implement such a bequest or transfer, must distribute assets, including cash, having an aggregate fair market value at the date, or dates, of distribution amounting to no less than the amount of the pecuniary bequest or transfer, as finally determined for Federal estate tax purposes, the marital deduction may be allowed in the full amount of the pecuniary bequest or transfer in trust. Alternatively, where, by virtue of such duties, it is clear that the fiduciary must distribute assets, including cash, fairly representative of appreciation or depreciation in the value of all property thus available for distribution in satisfaction of such pecuniary bequest or transfer, the marital deduction is equally determinable and may be allowed in the full amount of the pecuniary bequest or transfer in trust passing to the surviving spouse.

.03 In many instances, however, by virtue of the provisions of the will or trust, or by virtue of applicable state law (or because of an absence of applicable state decisions), it may not be clear that the discretion of the fiduciary would be limited in this respect, and it cannot be determined that he would be required to make distribution in conformance with one or the other of the above requirements or that one rather than the other is applicable. In such a case, the interest in property passing from the decedent to his surviving spouse would not be ascertainable as of the date of death, if the property available for distribution included assets which might fluctuate in value.

SEC. 3. INSTRUCTIONS TO TAXPAYERS AND SERVICE PERSONNEL.

.01 In cases where it is not clear on the record available that the discretion of the executor would be limited, as set forth in section 2.02, the marital deduction may nevertheless be allowed for the value of such a pecuniary bequest or transfer in trust, under an instrument executed prior to October 1, 1964, if the Internal Revenue Service receives appropriate agreements from the fiduciary

and the surviving spouse that the assets of the estate, both cash and other property, available for distribution will be so distributed between the marital deduction bequest or transfer in trust and the balance of the estate available for distribution in satisfaction of such pecuniary bequest or transfer that the cash and other property distributed in satisfaction of the marital deduction pecuniary bequest or transfer in trust will be fairly representative of the net appreciation or depreciation in the value of the available property on the date or dates of distribution. The execution and performance of such an agreement will not constitute a gift.

.02 If the fiduciary fails to make distribution in accordance with the agreements executed pursuant to the preceding paragraph, and the value of the assets distributed to satisfy the marital bequest or transfer in trust is less than the amount required by such agreements, the surviving spouse will be considered to have made a gift or gifts to the beneficiaries in whose favor the failure occurs, as of the date, or dates, of distribution, unless the surviving spouse, when apprised of the situation, promptly objects and takes those steps appropriate under applicable state law to rectify it.

SEC. 4. SCOPE.

.01 The problem here considered is restricted to the situation involving bequests and transfers in trust described in sections 1 and 2.01. It does not arise in other cases, for example:

(1) In a bequest or transfer in trust of a fractional share of the estate, under which each beneficiary shares proportionately in the appreciation or depreciation in the value of assets to the date, or dates, of distribution.

(2) In a bequest or transfer in trust of specific assets.

(3) In a pecuniary bequest or transfer in trust, whether in a stated amount or an amount computed by the use of a formula, if:

(a) The fiduciary must satisfy the pecuniary bequest or transfer in trust solely in cash, or

(b) The fiduciary has no discretion in the selection of the assets to be distributed in kind, or

(c) Assets selected by the fiduciary to be distributed in kind in satisfaction of the bequest or transfer in trust are required to be valued at their respective values on the date, or dates, of their distribution.

.02 This Revenue Procedure does not relate to any issue arising under the income tax provisions of the Internal Revenue Code.

[Section 5, prescribing the form of agreements to meet the requirements of §3, omitted.]

NOTE

1. *Effect of executor's discretion.* If the executor is not required by local law to make a distribution to the widow that is no less than the pecuniary bequest or that is fairly representative of the appreciation or depreciation in the value of all property distributable in satisfaction of the bequest, does Rev. Proc. 64-19 adopt the view that the marital deduction is to be disallowed in toto? On what part of §2056 does the Internal Revenue Service rely in expressing the view that disallowance is justified?

On local law, see In re Inman's Estate, 196 N.Y.S.2d 369 (N.Y. Surr. 1959) (marital deduction trust is to share in appreciation and depreciation to date of distribution); Matter of Mueller, 34 Misc. 2d 584 (N.Y. 1962); In re Althouse's Estate, 172 A.2d 146 (Pa. 1961) (marital bequest treated as pecuniary gift rather than fractional share of residue; held, it does not participate in appreciation). If there is no controlling local statute or prior decision, will the disallowance threatened by Rev. Proc. 64-19 be avoided if the pro-

bate court having jurisdiction of the estate in question directs that the distribution meet one of the two conditions set out in §2.02?

2. *Income tax effect of using appreciated or depreciated property.* Revenue Proc. 64-19 refrains from commenting on the income tax effect of a distribution of appreciated or depreciated property. Revenue Rul. 56-270, 1956-1 C.B. 325, ruled that a marital deduction clause providing for a bequest equal to the maximum allowable marital deduction creates a pecuniary obligation, so that the use of appreciated or depreciated assets to satisfy the bequest constitutes a taxable realization by the estate of the increase or decrease in value between the date of death (or the optional valuation date) and the date of distribution. The ruling relied on Kenan v. Commissioner and Suisman v. Eaton, supra page 438. See also Rev. Rul. 60-87, 1960-1 C.B. 286, amplifying Rev. Rul. 56-270, and stating that if the surviving spouse is to receive a fraction or percentage of the residue of the testator's estate — so that she shares in the appreciation or depreciation in the assets between the date of death and the date of distribution — the bequest does not provide for a fixed and definite "dollar amount," with the result that gain or loss is not realized by the estate. If there has been a net appreciation in the value of the estate, however, the value of the assets received by the surviving spouse under such a fraction-of-the-residue clause will be greater than necessary to achieve the maximum marital deduction, and the excess will swell the surviving spouse's potential estate tax. The clause that evoked Rev. Proc. 64-19, under which the executor is authorized to satisfy a marital bequest with assets at their estate tax basis, was designed to avoid the realization of gain by the estate on the distribution, but to give the surviving spouse the minimum amount consistent with a maximum marital deduction for the husband's estate. Are these mutually inconsistent aims?

If the estate realizes gain or loss because the assets are distributed in discharge of a "dollar amount" bequest, what is the income tax basis of the assets in the hands of the surviving spouse or the trustee of the marital deduction trust?

Matter of GILMOUR
18 A.D.2d 154 (N.Y. 3d Dept. 1963)

HERLIHY, J. The children of the decedent appealed from the method adopted by the Surrogate in computing the amount of the marital deduction trust. . . .

It is apparent, as will hereinafter appear, that the decedent, in drafting his will, was so intent on taking full advantage of the maximum marital Federal tax deductions that he failed to comprehend the possible inequities which might and did result therefrom.

I. As to the method of computing the marital deduction, paragraph "Three" of the will, so far as pertinent, provides:

". . . [A]n *amount* equal to the difference between: (a) One-half (½) of the value of my adjusted gross estate; and (b) the value of all property passing to my said wife under any other article or articles of this, my Will, or otherwise, and with respect to which a marital deduction is allowable to my estate under the provisions of the United States Internal Revenue Code, Section 2056; . . . As used in this article of my Will:

"(a) 'My adjusted gross estate' means my adjusted gross estate as defined in Section 2056 of the Internal Revenue Code (or in such other statutory provision as shall correspond thereto at the time of my death);

"(b) The references to 'the value of my adjusted gross estate' and to 'the value of property passing to my said wife' mean, in each case, the value thereof as *finally* determined for the purpose of fixing the Federal Estate Tax on my estate; and,

"(c) 'Marital deduction' means the marital deduction provided for in said Section 2056.

"It is my *intention* to obtain the maximum marital deduction allowable to my estate under the provisions of Section 2056, and the provisions of this, my Will, shall be construed so as to give full effect to my said intention." (Emphasis supplied.)

The Surrogate followed this language precisely and decided that as *finally determined* by the Federal tax authorities, the *adjusted gross estate* amounted to $1,036,959.16 and that the fixed amount of the *maximum marital deduction* was $518,479.58 (one half of the adjusted gross estate). There was deducted therefrom $32,000, assets passing outside of the trust to the widow and not pertinent to the issues herein. After deduction of the amount payable to the marital trust and the payment of all other charges, there remained a balance of $99,090.18 which constituted the *rest, residue and remainder* of the decedent's estate for the establishment of separate trusts for his two children.

This apparently inequitable result was due to the following adjustments made by the Internal Revenue Service at the time of the final audit fixing the Federal estate tax:

(a) The decedent within three years prior to his death made transfers to his children valued at $155,883.12, and upon audit of the estate tax return, the transfers were found to have been made in contemplation of death, and accordingly that amount was added to the gross estate as computed by the executors and the adjusted gross estate for tax purposes was enlarged by that amount.

(b) From the total amount claimed for funeral and administration expenses there was disallowed $80,618.91.

(c) Under the schedule of debts of the decedent [$628,756.23], which included personal income tax assessments, the Internal Revenue Service disallowed therefrom the sum of $183,509.75 * as it did not appear "from the evidence on file that they represented obligations incurred for an adequate and full consideration in money or money's worth."

These figures total $420,011.78, which together with other charges, not necessary to be enumerated, account for the substantial variation between the amount of the marital deduction trust fund and the residuary amount for the establishment of the children's trusts.

While it might be argued that these tax allowances and charges were not anticipated and ordinarily not to be expected, where a testator elects to use a definitive tax formula as the dispositive control for the distribution of the assets of his estate, he assumes whatever inherent risk may attach to the strict interpretation given to his intended and elected formula.

In the interpretation of a will, the intention of the testator, as gathered from the language of the will, is, of course, controlling. (Bigelow v. Percival, 162 App. Div. 831.) The fact that events happened subsequent to the probate of a will which were not foreseen by the testator cannot change the meaning of the language used. "When the purpose of a testator is reasonably clear by reading his words in their natural and common sense, the courts have not the right to annul or pervert that purpose upon the ground that a consequence of it might not have been thought of or intended by him." (Matter of Tamargo, 220 N.Y. 225, 228.) "[W]e cannot make a new will or build up a scheme for the purpose of carrying out what might be thought was or would be in accordance with his wishes." (Tilden v. Green, 130 N.Y. 29, 51.)

Matter of Inman (22 Misc. 2d 573) is strikingly similar to this case where the

* The reason for the federal disallowance of $80,618 of administration expenses and $183,509 of debts is not set out in the record, but these amounts were evidently treated as liabilities of the estate by the executor despite the Internal Revenue Service's refusal to allow them to be deducted in computing the estate tax liability. —Ed.

testator therein directed that the marital trust be based upon the "adjusted gross estate." The Surrogate decided that the trust in the will had to be given the operative effect that the testator intended, namely, that the marital trust be fixed in an amount equal to one half of the adjusted gross estate determined for tax purposes.

The executors rely upon Matter of Walsh (14 Misc. 2d 1012, affd. 8 A.D.2d 831) where the value of the gifts were deducted from the trust, but the distinguishing feature in that case is that the inter vivos gifts were made to the wife and not, as here, to the children.

Here, the testator probably did not foresee that the *finally determined* adjusted gross estate would be so inflated but his resorting to such drastic and unequivocal language in expressing his *intention* to obtain the *maximum marital deduction* prevents the granting of any relief.

II. The expenses of maintenance of the house, as provided in paragraph "Eight" of the will, should be charged to income rather than principal assets.

Paragraph "Eight" of the will provided that the widow might remain in the house for "two (2) years, without any rent or charge for occupancy, and that all taxes, assessments . . . and normal upkeep . . . shall be borne by my estate . . . and not charged specifically against the interest which I have given to my said wife."

The Surrogate decided it was the intention of the testator that these expenses should be charged to principal rather than income. The general rule provides that carrying charges on nonproductive real property are payable from income in the absence of a contrary intent in the will. (Matter of Albertson, 113 N.Y. 434, 439; Spencer v. Spencer, 219 N.Y. 459, 465; Matter of Satterwhite, 262 N.Y. 339; Matter of Kazanjian, 53 N.Y.S.2d 275.)

From a reading of the present will, it is apparent that the intention of the testator was not contrary to the general rule and accordingly we determine that the expenses of maintenance (approximately $9,449.08) should be charged to income assets. . . .

NOTE

1. *Formula clauses.* The marital deduction can equal, but it cannot exceed, 50 per cent of the adjusted gross estate. §2056(c)(1). If the entire adjusted gross estate goes to the wife, the husband's estate is sure to get the maximum marital deduction. But his wife's estate, on her death, may then be needlessly large; if she lives on the income alone, 50 per cent of the husband's property will have been taxed on his death and 100 per cent on her death. Partial protection against two taxes in rapid succession can be obtained by providing that the wife will take nothing if she dies either in a common disaster with her husband or from any cause within 6 months after his death. If she does die in a common disaster or within 6 months, the husband's estate will be taxed on 100 per cent of his property (since no property passes to the wife, no marital deduction is allowable), but there will be no tax on the wife's death. On the other hand, if the wife does not die in a common disaster or within 6 months of her husband, the interest passing to her qualifies for the marital deduction; §2056(b)(3) saves it from the the category of "terminable interest." But then the family will be subjected, as indicated above, to two taxes, one on 50 per cent, and the second on 100 per cent, of the husband's property.*

If the husband's entire gross estate passes under his will, a bequest of one half to

* If the wife dies within 10 years of her husband's death, her estate will be entitled to a credit under §2013 for part or all of the estate tax paid by his estate on the property that exceeded the marital deduction, but the credit will be less than the amount paid by the husband's estate if the wife survives her husband by more than 2 years.

his wife (outright or in the form of a life interest with power of appointment) will insure the maximum marital deduction. The other half can be left to the children, to the wife for life with remainders to the children, to the wife for life with a non-general power of appointment, or by some other disposition that will not bring it into her estate. Thus, only the one half that qualifies for a marital deduction in the husband's estate will be includible in the wife's estate on her death.

If the husband's gross estate includes non-probate property (e.g., insurance proceeds payable to designated beneficiaries, jointly held property, gifts in contemplation of death, inter vivos trusts, etc.), it is more difficult to insure that the estate will obtain the maximum marital deduction without needlessly increasing the potential tax on the wife's death. If the inter vivos transfers were to persons other than the wife, she must get more than one half of the probate property, if full advantage is to be taken of the marital deduction. If the transfers outside the will were to the wife, however, she must get less than one half of the probate property lest her estate be unnecessarily increased. A proposed "formula clause" to give the wife an amount which will insure the maximum marital deduction, but no more, provides as follows:

> If my wife survives me, I devise and bequeath to her a portion of my estate the value of which shall be exactly the sum needed to obtain the maximum marital deduction in determining the Federal estate tax on my estate after taking into account all the other items of my gross estate (whether passing under this Will or otherwise) that qualify for said deduction.

In the early days of the marital deduction, some commentators speculated that a formula clause of this type might be held invalid as improperly incorporating by reference a document (the Internal Revenue Code) that might be changed after the will was executed. Others suggested that the rule against perpetuities might be violated, since the estate tax values, which control the amount of the bequest, will not necessarily be ascertained during the perpetuities period. These fears have proved to be unfounded, if for no other reason than judicial reluctance to upset a testamentary pattern that is now widely used. See also Braun v. Central Trust Co., 104 N.E.2d 480 (Ohio, 1951), rejecting the argument that a formula clause violates the rule against perpetuities; Conn. Gen. Stats. §45-174, providing that wills may refer to federal statutes or regulations governing the marital deduction as a means of computing the amount of a bequest.

Even though formula clauses are valid, they may create difficult problems of administration for the executor. Consider the effect of an inter vivos gift to a child that the government asserts was made in contemplation of death. If it is included in the gross estate, the formula clause will increase the surviving spouse's share of the probate estate. Must the executor resist the government's claim with especial vigor lest the heirs claim he is favoring the wife? Because of the gift tax credit of §2012, it is possible that inclusion of such a gift will not increase the estate tax. If so, could the executor properly spend funds of the estate to litigate the contemplation of death issue because of its effect on the substantive rights of the legatees? If the inter vivos transfer in question was a gift to the surviving spouse rather than to a child, how will the formula clause affect the executor, the surviving spouse, the other heirs, and the tax collector? The executor may find the formula clause troublesome at other points as well, e.g., in deciding whether to employ the optional valuation date of §2032 or to take deductions on the income tax return instead of on the estate tax return, supra page 1273, since his decisions on these matters may affect the size of the surviving spouse's share under the formula clause. See In re Inman, 22 Misc. 2d 573 (N.Y. 1959) (effect of election to deduct administration expenses on income tax return on marital bequest).

2. *Widow's disclaimer in estate planning.* As an alternative to a formula clause, is it feasible for the testator to leave his entire probate estate to his wife outright, and for her to disclaim whatever amount is not needed to insure the maximum marital deduction for her husband's estate? (This plan assumes that the husband is willing for the widow to take everything if she wishes.) The purpose of the disclaimer, if made, would be to avoid a needlessly large tax on her estate; and the amount disclaimed could be computed

so as to produce either the lowest *aggregate* tax on the two estates or the lowest possible tax on her husband's estate. See page 1270 supra for the possibility of a gift tax on the disclaimer.

Note that if the widow receives "too much" from her husband's estate, she can diminish her own potential estate tax by inter vivos gifts (taking advantage of the annual exclusion and the specific exemption, if not previously exhausted) during the period after her husband's death.

3. *Is the maximum marital deduction always advantageous?* It is sometimes assumed that if the husband leaves the wife enough to insure that his estate will get the maximum marital deduction and leaves everything else in such a form that it will not be included in her estate, the lowest possible aggregate estate taxes will result. Indeed, there are tables, formulas, and even a handy slide rule to compute in dollars the tax savings that such a disposition will produce, as against leaving everything to the wife outright or leaving her less than enough to secure the maximum marital deduction. But *will* the tax savings necessarily be realized? What if tax rates change? What if there are wide fluctuations in property values? What if the wife does not use all of the income from the property left to her and reinvests the unconsumed portion? How are the calculations affected by the wife's own property?

4. *The surviving husband.* In our society, the husband typically owns most of the family property and dies before his wife. If the first spouse to die owns little or no property, however, the marital deduction will be correspondingly small — or nonexistent. In such cases, the 1948 estate tax legislation failed to produce equality between community property and common law property states. Is there a do-it-yourself remedy for the married couple in a common law property jurisdiction? Consider the estate and gift tax consequences of an inter vivos division of their property.

Should there be *any* tax on transfers of property, either inter vivos or at death, between husband and wife? See DeWind, The Approaching Crisis in Federal Estate and Gift Taxation, 38 Calif. L. Rev. 79, 109-116 (1950).

5. *Charitable gifts to increase the marital deduction?* In an article entitled Personal Finance: How to Save By Giving (N.Y. Times, Oct. 7, 1963, p. 48), the following plan for increasing the taxpayer's potential marital deduction by making an inter vivos charitable contribution is described:

> The greatest tax advantage of charitable giving through life insurance is to high-income or wealthy people, especially in the area of estate taxation. For example, a man leaving a $1,000,000 estate might save his heirs as much as $70,000 in Federal estate taxes by directing some of his charitable giving to the purchase of a $500,000 policy for the benefit of his favorite charity. The premium payments of course, would be immediately tax deductible.
>
> In buying the policy, he would name the recipient institution irrevocable beneficiary and possibly owner of the policy. However, he would retain what is legally referred to as an "incident of ownership," such as the right to determine the settlement option by which the beneficiary would receive the proceeds. That incident of ownership allows the inclusion of the proceeds of the policy in his total estate, thus increasing it from $1,000,000 to $1,500,000.
>
> In the case of a $1,000,000 estate, the adjusted gross estate, after deduction of perhaps $100,000 in expenses, would be $900,000. The wife would be entitled to half of that, tax free. An additional $60,000 personal deduction for the deceased would leave a taxable balance of $390,000. The Federal estate tax on that amount, not considering any credit for state-tax payments, would be $91,300.
>
> In the case of the $1,500,000 estate, including the $500,000 charitable policy, the adjusted gross estate would be $1,400,000, allowing the same $100,000 in expenses. The wife would be allowed a tax-free half of that, or $700,000. Of the balance, $500,000 — the proceeds of the policy — would go tax-free, to the church, hospital or other institution named, leaving $200,000, from which the deceased's personal deduction of $60,000 is made. The remainder of $160,000 would be the taxable balance on which a Federal estate tax payment of $20,800 would be due.

If this plan were to be described with the same care that goes, or should go, into the drafting of an SEC registration statement, what more would have to be said so that what was said would not be misleading?

6. *Income tax basis of marital deduction property.* The surviving spouse's income tax basis for inherited property is its date-of-death (or optional valuation date) value by virtue of §1014, even though it qualified for a marital deduction. For the parallel rule applicable to the wife's share of community property, see §1014(b)(6).

SMITH'S ESTATE v. COMMISSIONER

23 T.C. 367 (1954)

LEMIRE, Judge: The respondent determined a deficiency in gift taxes for the year 1948 in the amount of $604.92.

The issue for determination is whether decedent is entitled to a marital deduction with respect to the sum of $5,041 which he paid to insurance companies as premiums on life insurance policies on his life which he had transferred in trust. . . .

On November 23, 1934, the decedent created a trust by deed. The provisions of the trust instrument, material here, read as follows:

I, CHARLES C. SMITH, at Philadelphia, Pennsylvania, hereby irrevocably assign and deliver to PROVIDENT TRUST COMPANY OF PHILADELPHIA, and its Successors, the Life insurance policies set forth in the Schedule hereto annexed, In Trust, for the following uses and purposes:

FIRST: Trust Provisions: Trustee shall collect and receive all sums payable to or expended on behalf of such beneficiary by Trustee, in such manner as shall hold and apply said sums and the net income therefrom in accordance with the following terms and provisions:

(a) [This paragraph provided certain benefits for the settlor's mother-in-law, which were nullified by her death in 1938, prior to the taxable year in dispute.]

(b) Subject to the provisions of paragraph (a) of this First Section, Trustee shall hold the principal of said Trust and shall pay the net income therefrom to my wife, Frances Hayward Smith, for her life. Trustee shall also pay to my wife such sums out of the principal held under this paragraph (b) as she may from time to time in writing request Trustee to pay to her; provided, however, that such payments to my wife out of principal under the terms of this paragraph (b) shall not exceed in the aggregate Twenty-five thousand Dollars. I authorize Trustee also to pay to my wife, or expend for her benefit, such sums out of the principal held under this paragraph (b) as Trustee may from time to time deem necessary for her proper comfort and support.

At the decease of my wife, Frances Hayward Smith, Trustee shall distribute the principal then held under this paragraph (b) to such persons and in such manner and shares and for such estates or upon such trusts as my said wife may have directed and appointed by her last Will; and in default of such direction and appointment, then to the persons who would have been entitled thereto, under the then existing Intestate Laws of the State of Pennsylvania, had I died intestate, at that time, seized and possessed thereof. . . .

THIRD: Principal Expenditures: Trustee may expend out of the share of principal from which any beneficiary under this Deed may be receiving income such sums as Trustee may consider to be for the best interest of such beneficiary, during illness or emergency of any kind.

FOURTH: Right in Trustee to Borrow on Policies: I authorize Trustee during my

lifetime, if in the opinion of Trustee, in its sole discretion, it would be advisable so to do, to borrow on any policy or policies of insurance held hereunder, for the purpose of raising funds for any beneficiary hereunder who in the opinion of Trustee may be in need of such funds: the amounts so borrowed to be paid to or expended on behalf of such beneficiary by Trustee, in such manner as Trustee in its sole discretion may determine. . . .

THIRTEENTH: Settlor's Relinquishment of Rights under Policies: [By this clause the taxpayer relinquished the incidents of ownership of the insurance policies.]

After the execution of the trust deed the decedent assigned certain life insurance policies on his life to the trustee.

From the date the trust was created to December 1948, the corpus of the trust consisted only of the life insurance policies, and the trust never realized any distributable income. . . .

Charles C. Smith, the settlor of the trust, died testate on August 7, 1954.

The petitioners [the settlor's executors] claim a marital deduction in computing net gifts for the year 1948 with respect to insurance premiums paid on the life insurance policies transferred to the trust. The applicable provision involved is [§2523(e)]. This section allows a marital deduction for gifts to a trust for the benefit of the donor's surviving spouse, if the beneficiary is entitled to all the income from the corpus of the trust for life, payable annually or at more frequent intervals, with the power in the donee spouse to appoint the corpus free of the trust to herself or her estate.

The petitioners contend that the trust instrument meets the requirements of the statute and that the regulations prescribed by the respondent relative to the payment of income are invalid. Regs. [§25.2523(e)-1(f)]. The regulations are rather extensive and we will refer only to that part material to the narrow issue presented.

At the time of the transfers in question the corpus of the trust consisted solely of insurance policies on the life of the settlor spouse. The settlor knew and intended that the trust would not provide any economic benefits until his death would bring into the trust the proceeds of the policies. Then, and only then, would the trust have unrestricted property which would produce an income for his wife.

The regulations material here provide that the beneficiary must be the virtual owner of the property during her life. The regulations further provide:

(4) Provisions granting administrative powers to the trustees will not have the effect of disqualifying an interest transferred in trust unless the grant of powers evidences the intention to deprive the donee spouse of the beneficial enjoyment required by the statute. Such an intention will not be considered to exist if the entire terms of the instrument are such that the local courts will impose reasonable limitations upon the exercise of the powers. Among the powers which if subject to reasonable limitations will not disqualify the interest transferred in trust are the power to determine the allocation or apportionment of receipts and disbursements between income and corpus, the power to apply the income or corpus for the benefit of the spouse, and the power to retain the assets transferred to the trust. For example, a power to retain trust assets which consist substantially of unproductive property will not disqualify the interest if the applicable rules for the administration of the trust require, or permit the spouse to require, that the trustee either make the property productive or convert it within a reasonable time. Nor will such a power disqualify the interest if the applicable rules for administration of the trust require the trustee to use the degree of judgment and care in the exercise of the power which a prudent man would use if he were owner of the trust assets. Further, a power to retain a residence for the spouse or other property for the personal use of the spouse will not disqualify the interest transferred in trust.

(5) An interest transferred in trust will not satisfy the condition set forth in paragraph

(a)(1) of this section that the donee spouse be entitled to all the income if the primary purpose of the trust is to safeguard property without providing the spouse with the required beneficial enjoyment. Such trusts include not only trusts which expressly provide for the accumulation of the income but also trusts which indirectly accomplish a similar purpose. For example, assume that the corpus of a trust consists substantially of property which is not likely to be income producing during the life of the donee spouse and that the spouse cannot compel the trustee to convert or otherwise deal with the property as described in subparagraph (4) of this paragraph. An interest transferred to such a trust will not qualify unless the applicable rules for the administration require, or permit the spouse to require, that the trustee provide the required beneficial enjoyment, such as by payments to the spouse out of other assets of the trust.*

The petitioners rely on subparagraph (b) of paragraph FIRST of the trust deed which provides that "Subject to the provisions of paragraph (a) of this First Section, Trustee shall hold the principal of said Trust and shall pay the net income therefrom to my wife, Frances Hayward Smith, for her life."

There is no provision in the trust deed giving the settlor's wife the right to compel the trustee to convert the insurance policies into income-producing property.

The tenor of the trust deed is that it was the settlor's intention to have the policies retained by the trustee until his death, and to have such income as was received by way of dividends on the policies devoted to their preservation.

The direction contained in subparagraph (b) of the trust deed's paragraph FIRST, respecting the payment of income, was without any substance and impossible of fulfillment, because the entire corpus was of non-income-producing property. Jesse S. Phillips, 12 T.C. 216, 223; Commissioner v. Boeing, 123 F.2d 86.

Treasury regulations are ordinarily valid unless unreasonable or inconsistent with the statute. Fawcus Mach. Co. v. United States, 282 U.S. 375; Commissioner v. Wheeler, 324 U.S. 542. If not unreasonable or plainly inconsistent with the statute they should not be overruled except for weighty reasons. Commissioner v. South Texas Lumber Co., 333 U.S. 496, 501. We think the regulations here involved in no way extend the statute but rather follow both the letter and spirit of the law. We hold that they are valid.

Accordingly, we sustain the respondent's disallowance of the marital deduction claimed with respect to the gifts of insurance premiums made in the tax year 1948.

KASS v. COMMISSIONER

¶57,227 P-H Memo T.C.

TRAIN, Judge:

Respondent determined a deficiency of $1,620 in the gift tax of the petitioner for the year 1952. The only issue is whether the interests of third parties under a certain gift in trust of which petitioner's spouse is the life beneficiary were "ascertainable at the time of the gift, and hence severable from the interest transferred to his spouse," as provided by Treasury Regulations [§25.2513-1(b)(4)], so that petitioner is entitled to the gift-splitting benefits of [§2513].

All the facts have been stipulated and are hereby found as stipulated.

The petitioner is an individual and a resident of New York. On January 5, 1952, the petitioner made a gift in trust of 5,000 Class A shares of Universal Leather Goods, Ltd., a British corporation, in accordance with a trust instrument

* Current Regs. §25.2523(e)-1(f)(4) and (5) have been substituted for the earlier Regulations quoted by the court. — ED.

executed on the same day. The 5,000 shares had a value of $54,000 at the time of the transfer.

On March 15, 1953, the petitioner filed a timely gift tax return with the district director for the third district of New York, reporting the above gift and, with her consent, splitting the gift with his wife Marie Kass. On the same day, she filed a gift tax return reporting one-half of the gift.

Both the petitioner and his wife are citizens and residents of the United States and were such on January 5, 1952. Marie Kass was 70 years old on January 5, 1952. On January 1, 1952, she was the owner of securities, independent of the trust, with a total market value of approximately $132,000. During the years 1951 through 1954, Marie Kass reported for Federal income tax purposes the following income from dividends, which does not include the income distributed to her under the trust in question:

1951	$6,100.61
1952	4,746.69
1953	6,531.94
1954	7,177.03

During the years 1952, 1953, 1954, and 1955, Marie Kass reported on her joint Federal income tax return filed together with the petitioner the following net income (after British taxes) from distributions under the trust in question:

1952	None
1953	$9,236.77
1954	3,732.32
1955	3,953.56

No invasion or distribution of the trust corpus has occurred since the creation of the trust. The trustees do and continue to hold in trust the original 5,000 shares of stock.

The trust instrument provided that the net income should be paid to Marie Kass for life. Upon her death, it was provided that the trust should be divided into three equal trusts, each of which had income beneficiaries and remainders over. The trust instrument provided further:

> THIRD: The Trustees, in their absolute discretion, shall have the power to pay from time to time, out of the principal of any Trust, such sum or sums to any income beneficiary of such Trust as the Trustees may deem necessary or advisable for the general welfare of such beneficiary. In the exercise of this power, the Trustees may, in their discretion, exhaust the principal of any Trust, in which case, such Trust shall terminate.

The petitioner contends that "general welfare" in "Third" of the trust instrument provides a fixed standard limiting the power to invade the principal, and that, in light of the facts, the probability of exercise of the power is so low as to be negligible. The respondent maintains that no such standard is provided and that, even if "general welfare" provides a sufficient standard of limitation, the facts are not sufficient to enable one to ascertain the probability of the exercise of the power. In short, the respondent contends that the interests of third parties were not ascertainable at the time of the gift. Regulations [§25.2513-1(b)(4)].

On the record before us, we must sustain the respondent's position.

We shall assume, without deciding, that the term "general welfare" is equivalent to a provision for maintaining the income beneficiary according to her usual standard of living. See Blodget v. Delaney, 201 F.2d 589 (C.A. 1, 1953); In re Mayer's Will, 59 N.Y.S.2d 558 (1945); Commissioner v. Robertson's Estate, 141 F.2d 855 (C.A. 4, 1944), affirming a memorandum opinion of this Court dated

September 12, 1942. However, the remoteness of the possibility of the power being exercised is a matter of practicability and depends upon the factual circumstances as well as the language limiting the power. William H. Robertson, 26 T.C. 246 (1956); Commissioner v. Robertson's Estate, supra; Commissioner v. Wells Fargo Bank & Union Trust Co., 145 F.2d 130 (C.A. 9, 1944), affirming a memorandum opinion of this Court dated May 20, 1943.

Petitioner has introduced no evidence of whether Marie Kass was supported by her husband and, if that is the case, his annual income. Likewise, the record is void of any evidence of Marie's annual living expenses. Nor does the record show whether she lived frugally or extravagantly. We know that she owned securities worth about $132,000 at the time of the gift, and we also know the amount of her annual income from dividends and from the trust. Finally, we know her age. Although relevant, these facts are here without any helpful significance in the absence of evidence as to her normal standard of living. Resources which might be more than adequate in the circumstances of one individual may be totally inadequate in those of another. The only evidence tending to show that her income was adequate is the fact that the trust principal has not been invaded for her benefit, but this fact was not ascertainable at the time of the gift. Regulations [§25.2513-1(b)(4)]; cf. Regulations [§20.2055-2(a)]; William H. Robertson, supra; Estate of Charles H. Wiggin, 3 T.C. 464 (1944); Commissioner v. Wells Fargo Bank & Trust Co., supra; Ithaca Trust Co., 279 U.S. 151 (1929), reversing 64 Ct. Cls. 686 (1928). But cf. Estate of Horace G. Wetherill, 4 T.C. 678 (1945). As in Andrew Geller, 9 T.C. 484 (1947), the taxpayer in the instant case has failed to prove sufficient facts by which to measure the probability of the exercise of the power.

The cases relied upon by the petitioner are distinguishable in that further facts were found in those cases not present here which were necessary to prove the remoteness of the possibility of invasion. See Ithaca Trust Co., supra; William H. Robertson, supra; Commissioner v. Robertson's Estate, supra; Estate of Horace G. Wetherill, supra.

Petitioner has conceded the only other issue, involving the disallowance of the annual gift exclusion of $3,000.

NOTE

Implications of Kass case. Was taxpayer entitled to a marital deduction in respect of the transfer? What would have been the result if he had given his wife 2500 shares of the stock in question, and they had then joined in the creation of a trust with terms identical with those in the disputed trust?

Would the result in the case have been different if the taxpayer had proved that the likelihood of the taxpayer's wife needing any of the principal was extremely slight?

Does *Holtz' Estate* (supra p. 1013) shed any light on the proper treatment of the trust in Kass v. Commissioner?

SECTION F. CREDITS AGAINST THE TAX

After the estate tax has been computed by applying the rates set out in §2001 to the "taxable estate," certain credits are computed and deducted. These credits are allowed for (1) state death taxes paid with respect to property included in the gross estate (§2011), (2) death taxes paid to a foreign country in respect of property situated in that country and included in the gross estate (§2014), (3) federal gift taxes paid on an inter vivos transfer of property that is included in the gross estate (§2012), and (4) federal estate taxes paid by another decedent with respect

to property transferred by him to the current decedent if the former died within the 12-year period beginning ten years before the latter's death and ending two years after his death.

1. *Credit for State Death Taxes: §2011*

ADVISORY COMMISSION ON INTERGOVERNMENTAL RELATIONS, REPORT ON COORDINATION OF STATE AND FEDERAL INHERITANCE, ESTATE AND GIFT TAXES

32-35 (1961)

The dominant factor in death taxation in the United States is the Federal estate tax. The present tax dates from 1916, but the National Government has levied death taxes of various types intermittently since 1798 (1798 to 1802; 1861 to 1870; 1898 to 1902). Unlike the previous inheritance taxes of both the National Government and the States, the 1916 Federal tax was imposed on the transfer of the entire estate rather than on the separate amount going to each beneficiary.

When the National Government enacted its present estate tax, State death taxation already had a long history. Pennsylvania led off in this field in 1825 with an inheritance tax on collateral heirs. Several States followed Pennsylvania's example with taxes on direct, as well as collateral, heirs. These early enactments fell into disuse after the Civil War, and by 1885 only two or three States were making effective use of them. The imposition of a 5 percent tax on collateral heirs by New York in 1885 marked the revival of State interest in this tax field and in 1903 Wisconsin pioneered graduated rates on transfers to direct and collateral heirs with a comprehensive definition of taxable property and a centralized State tax administration. By 1916 all but five States had adopted some form of inheritance tax and spokesmen for the States regarded the taxation of bequests their special tax preserve.

The enactment of the Federal estate tax in 1916 focused attention on Federal-State tax relations which by then had been under discussion for some time. Nearly 10 years earlier, spokesmen for the States strongly opposed President Theodore Roosevelt's proposal for a Federal inheritance tax.* They urged that death duties be considered State rather than Federal sources of revenue, among other reasons because some States had relied upon this source of revenue for almost a century.

The enactment of the Federal estate tax, and more particularly its retention after the First World War, rekindled State opposition to the Federal levy and culminated in two conferences on inheritance and estate taxation held in 1925 under the auspices of the National Tax Association. In the meanwhile a 25 percent Federal credit for State taxes had been introduced in 1924. These conferences resolved that the Federal Government should withdraw from the field of death taxation within 6 years and in the interim should allow taxpayers an 80 percent credit against Federal tax liability for taxes paid to States. There were some, however, who opposed repeal of the Federal tax. They feared that competitive tax reduction among the States to attract wealthy residents would quickly dissipate this tax area as a source of State revenue.† (In 1924 Florida had amended

* Supra page 989. — Ed.

† See Perkins, State Action Under the Federal Estate Tax Credit Clause, 13 N.C.L. Rev. 270 (1935): "In the spring of 1925 the Alabama Power Company proclaimed the opportunities of the

its constitution prohibiting inheritance taxation with a view to attracting residents from other States.) They wanted some Federal tax continued on a permanent basis together with the tax credit. This, in fact, was the solution adopted by the Congress in 1926 when it reduced tax rates, raised the exemption and increased the credit to 80 percent of Federal tax liability. The 1926 legislation was interpreted as a willingness on the part of the Federal Government to share death tax revenues with States on a permanent basis in the ratio of 1 to 4.

The Federal tax credit served a double purpose. It provided tax reduction, an objective of Federal tax policy in the 1920s. By allowing a credit for State taxes, it reduced the combined Federal-State tax burden. . . .

Introduction of the tax credit, moreover, fixed a floor under State death taxes in order to deter interstate competition for wealthy residents. This had the effect of enabling the States, through appropriate legislation, to impose death taxes as high as 80 percent of the Federal tax liability without adding to the net tax burden of their taxpayers. Within this limit, States could reserve for themselves tax revenue which otherwise would go to the Federal Government. A third objective, uniformity among State taxes, was not achieved partly because some State taxes already exceeded the credit.

After 1926 some of the States made an attempt to bring their death tax structure into conformity with that of the National Government. Some replaced old statutes with new enactments correlated with Federal law. Others, including New York, shifted to the estate tax type duty. Most States amended their laws to insure full utilization of the credit. The exception was Nevada. It repealed its inheritance tax in 1925 and, for many years, has been the only State not imposing a death tax. . . .

While some States were moving toward the Federal-State tax pattern visualized by the credit arrangement, the need for additional revenues moved the National Government away from that pattern.

In 1932 the Congress enacted higher estate tax rates but retained the rates under the basic 1926 tax for purposes of determining the maximum credit for State taxes. Federal rates were increased again in 1934, 1935, and 1941. A temporary 10 percent defense surtax was in effect from June 26, 1940, through September 20, 1941. Since 1941 Federal estate tax rates have remained unchanged. They range from 3 percent on the first $5,000 to 77 percent on that portion of taxable estates in excess of $10 million.

The estate tax specific exemption, which had been $100,000 under the basic 1926 tax, was reduced to $50,000 in 1932 and to $40,000 in 1935. In 1942 the

---

state whose name it carries by a series of advertisements of this nature: 'Who Gets Your Estate When You Die? That all Depends on Where You Live, What You Own and Where You Die. Taxation Figures of the H. C. Frick Estate as Published in the "Nation's Business" are a striking example: Federal Tax, $6,338,898.68; Pennsylvania State Inheritance Tax, $3,167,197.87; Other Inheritance Taxes, $1,546,565.49. If the H. C. Frick estate had been in Alabama and the testator had been a resident of Alabama, his state inheritance tax would have been Nothing!' Another advertisement in the series thus explained to the prospective decedent this elysian state of affairs: 'No Inheritance Tax Under Alabama Constitution. Not only has Alabama no Income nor Inheritance Tax but the framers of the Alabama Constitution have gone so far as to make sure that No Inheritance Tax Can Be Levied by the Alabama legislature on estates left to lineal descendants. Alabama is the Only State of Industrial Vantage Which Has Neither Income Nor Inheritance Tax. Profits Made in Alabama Pass to Heirs!'

"In the fall of the preceding year Florida amended her constitution in order to prohibit the taxation of inheritances and the taxation of incomes of residents of that state. . . . Such an amendment with its necessarily attendant publicity appeared to be an advertisement that Florida would be a permanent refuge from inheritance taxation. The legislature of Nevada in February 1925 followed up this procedure by repealing that state's inheritance tax act of twelve years' standing." — ED.

$40,000 specific exemption and a $30,000 insurance exclusion were combined into a $60,000 specific exemption. These post-1926 tax rate increases and exemption reductions provided no increase in the credit through which States might have shared in the additional revenue. On the contrary, the marital deduction for property passing to the surviving spouse, introduced in 1948, significantly reduced the amount of taxable property and Federal tax liabilities, thereby reducing the credit allowed for State taxes. The cumulative effect of these post-1926 changes is evident from Table 2.

TABLE 2. — *Credit for State Taxes in Relation to Gross Federal Estate Tax Liability*[1] *Under 1926 Act and Present Law*

	1926 Act			Present law					
		Tax credit		Single decedent			Decedent with surviving spouse[2]		
					Tax credit			Tax credit	
Net estate before specific exemption	Gross Federal tax	Amount	Percent of Federal tax	Gross Federal tax	Amount	Percent of Federal tax	Gross Federal tax	Amount	Percent of Federal tax
$100,000	0	0	—	$4,800	0	—	0	0	—
$150,000	$500	$400	80	17,900	$400	2.2	$1,050	0	—
$250,000	3,000	2,400	80	47,700	2,400	5.0	10,900	$200	1.8
$500,000	12,500	10,000	80	126,500	10,000	7.9	47,700	2,400	5.0
$1,000,000	41,500	33,200	80	303,500	33,200	10.9	126,500	10,000	7.9
$5,000,000	489,500	391,600	80	2,430,400	391,600	16.1	968,800	138,800	14.3
$10,000,000	1,334,500	1,067,600	80	6,042,600	1,067,600	17.7	2,430,400	391,600	16.1
$25,000,000	4,333,500	3,466,800	80	17,592,000	3,466,800	19.7	7,967,000	1,466,800	18.4

1 Gross Federal tax liability is before all tax credits. Present law rates are those provided in the Internal Revenue Code of 1954, originally enacted in 1941.

2 It is assumed that one-half of the estate is left to the spouse.

Another factor in altering the Federal-State death tax pattern contemplated in 1926 was the introduction of the Federal gift tax [which] . . . was deliberately designed to encourage the distribution of estates during the lifetime of the owners. To the extent property is distributed during life, the size of the estate subject to Federal and State death taxes is of course reduced. The gift tax allows no credit for taxes paid to the States. . . .

The impact of these developments on the States' share of death tax revenues is reflected in the tax collection statistics contained in Table 1 [omitted]. Thirty years ago State and local governments collected about three-fourths of all death taxes collected by all governments; the National Government about one-fourth. This relationship has now been reversed. The National Government's share is now about 80 percent; the State and local share about 20 percent.

In their efforts to preserve their share of the revenue from these taxes, States resorted to the enactment of independent inheritance, estate, and gift taxes outside the Federal credit. The Federal credit continues to serve the purpose of keeping a floor under State tax liability and preventing interstate competition but has not eliminated interstate diversity. Although every State, except Nevada, now imposes a tax at least equal to the maximum Federal credit, wide interstate variations remain both in structure and tax liability.

The basic outlines of the States' taxes fall into several groups. . . . The simplest of these are the five estate taxes patterned after the Federal statute and designed to impose a tax liability equal to the maximum credit for taxes paid to the States allowed under Federal law. Some of these so-called "pick-up" taxes, originally intended to preempt for the States the exact amount of the Federal credit — nothing more or less — have actually departed in some measure from the

pure "pick-up" pattern by adopting some provisions which differ from those contained in the Internal Revenue Code. In consequence, State tax liability, even in these States, frequently exceeds the Federal credit.

Three States use only inheritance taxes; 35 States and the District of Columbia rely primarily on inheritance taxes, which they supplement with "pick-up" statutes to absorb any unused Federal credit. . . .

Estate and inheritance tax rates and exemptions vary greatly among the States. . . .

There are important interstate variations also in the structural features of State death taxes, especially in deductions allowed in determining the net estate. An important variant, for example, is the treatment of Federal estate taxes. Half of the States and the District of Columbia allow this tax to be deducted in determining the amount of the taxable estate. . . . A marital deduction for property passing to the surviving spouse is allowed in 13 States. Most limit the marital deduction to a share of the estate but some exempt all property passing to the surviving spouse or children. . . .

In 1960 State death and gift tax collections aggregated $419 million. This total excludes small amounts ($16 million in 1958) of State imposed inheritance and estate taxes retained by local jurisdictions in 10 States and the collections of the District of Columbia. Death and gift taxes supply about 2.3 percent of the States' tax revenues and about 1.1 percent of the combined tax collections of State and local governments. These averages, however, submerge substantial variations among the States. In 1960 the share of State collections supplied by these taxes ranged from less than half of 1 percent in nine States to 7.1 percent in Connecticut.

[The report goes on (pp. 55-82) to describe various alternative tax credit arrangements.]

NOTE

1. *Calculation of the credit: 80 per cent of the federal "basic" tax.* In 1926, the maximum allowable credit was fixed at 80 per cent of the federal *basic* estate tax; no credit was allowed against the federal *additional* estate tax. When the basic and additional taxes were combined into a single federal estate tax by §2001 of the 1954 Code, the maximum allowable credit for state death taxes was set out in a table, §2011(b), and a method was provided for computing a "basic estate tax" to avoid distributing state statutes which refer to this concept. §2011(d); see page 1271 supra.

2. *Constitutionality of the credit.* The constitutionality of the credit was attacked without success by the State of Florida in Florida v. Mellon, 273 U.S. 12 (1927). The Supreme Court said, among other things:

> The contention that the federal tax is not uniform, because other states impose inheritance taxes while Florida does not, is without merit. Congress cannot accommodate its legislation to the conflicting or dissimilar laws of the several states, nor control the diverse conditions to be found in the various states, which necessarily work unlike results from the enforcement of the same tax. All that the Constitution (article 1, §8, cl. 1) requires is that the law shall be uniform in the sense that by its provisions the rule of liability shall be alike in all parts of the United States.
>
> The claim of immediate injury to the state rests upon the allegation that the act will have the result of inducing potential taxpayers to withdraw property from the state, thereby diminishing the subjects upon which the state power of taxation may operate. The averment to that effect, however, affords no basis for relief, because, not only is the state's right of taxation subordinate to that of the general government, but the anticipated result is purely speculative, and, at most, only remote and indirect. Minnesota v. Northern Securities Co., 194 U.S. 48, 68, 70. If, as alleged,

the supposed withdrawal of property will diminish the revenues of the state, non constat that the deficiency cannot readily be made up by an increased rate of taxation. Plainly, there is no substance in the contention that the state has sustained, or is immediately in danger of sustaining any direct injury as the result of the enforcement of the act in question. See In re Ayers, 123 U.S. 443, 496; Massachusetts v. Mellon, 262 U.S. 447, 488.

Nor can the suit be maintained by the state because of any injury to its citizens. They are also citizens of the United States and subject to its laws. In respect of their relations with the federal government — "it is the United States, and not the state, which represents them as parens patriae, when such representation becomes appropriate; and to the former, and not to the latter, they must look for such protective measures as flow from the status." Massachusetts v. Mellon, supra, pages 485, 486. [273 U.S. at 17-18.]

An attack by an executor was equally unsuccessful in Rouse v. United States, 65 Ct. Cl. 749 (1928), cert. denied, 278 U.S. 638.

3. *Federally based state death taxes.* As indicated in the Report of the Advisory Commission on Intergovernmental Relations, state "pick-up" (or "slack") taxes are widely used to collect the difference between the state death taxes otherwise owing by the estate and the maximum amount that can be credited under §2011 against the federal estate tax liability. See, for example, California Revenue and Taxation Code §13441 (imposing additional tax equal to difference between maximum federal credit and California inheritance tax); Florida Statutes §198.02 (imposing tax on estate of resident decedents equal to difference between federal credit and death taxes actually paid to other states). Despite its purpose of merely diverting funds from the federal government to the state, the "pick-up" tax in some circumstances may actually increase the estate's aggregate tax burden. See Wells v. Gay, 58 So.2d 848 (Fla. 1952), imposing the state "pick-up tax" even though it was paid after expiration of the time for claiming the federal credit; In re Good's Estate, 28 Cal. Rptr. 378 (1963) (state "pick-up" tax due even though estate would prefer to forego the §2011 credit, in order to increase the federal estate tax payable and thereby to increase the federal gift tax credit of §2012).

The "pick-up" tax automatically adjusts itself to the federal tax structure, and requires no more than a sentence or two in the state's statute books. New York recently took the additional step of modeling its basic death tax on the federal scheme by defining the state-taxed "gross estate" in the same manner as the federal "gross estate" (after elimination of out-of-state property), carrying over the federal deductions, etc. 59 McKinney's Consolidated Laws of New York Ann., art. 26. In enforcing the new tax, New York's administrators are to hitchhike: a "final federal determination" (as defined) as to includible property, allowable deductions, and values will also determine the same issue for New York purposes unless the federal determination is shown to be erroneous by a preponderance of the evidence. Query: What "evidence" can be introduced to prove that a question of *law* was erroneously determined? See generally Miller, An Introduction to New York's Federally-Based Estate Tax Statute, 34 N.Y.S.B.J. 267 (1962).

2. *Credit for Foreign Death Taxes: §2014*

For this credit, and the related possibility that double taxation will be avoided by an estate tax treaty, see page 1076 supra.

3. *Credit for Federal Gift Taxes: §2012*

Earlier portions of this book demonstrate how frequently property is included in the gross estate for estate tax purposes even though its transfer during the decedent's lifetime was subject to a federal gift tax. Section 2012 allows a credit against the estate tax in such circumstances, so that "the gift tax amounts in some instances to a security, a form of down-payment on the estate tax which secures the eventual payment of the latter." Smith v. Shaughnessy, supra page 1224. The first step in computing the credit is to determine the amount of gift tax paid on the gift, since this amount is one limitation (referred to as the "first limitation" in Regs. §20.2012-1) on the amount that may be credited by the decedent's estate. If the gift in question was the only gift made by the decedent in a particular year and it is fully included in the gross estate, the "first limitation" is readily applied, since the gift tax is the amount paid by the donee for that year. If the decedent made more than one gift during the year in question, however, application of the "first limitation" is more complex. The "second limitation" on the credit is that it may not exceed the estate tax attributable to inclusion of the gift in the decedent's gross estate. For some of the intricacies in the "second limitation," see Regs. §20.2012-1(d).

Although the gift tax paid may often be credited in full against the estate tax, sometimes the limitations of §2012 will permit a partial credit only. Such a loss of the part of the "down payment" may result if the decedent made extensive lifetime gifts, so that the gift tax paid on the transfer in question was greater than the estate tax attributable to it. Another possibility of a partial loss of the "down payment" arises because the credit under §2012 is computed by taking the value of the transferred property at the time of the gift or at the time of death, whichever is lower. Here again, the gift tax paid may have been more than the federal estate tax attributable to the transferred property, but the §2012 credit cannot exceed the latter amount.

Because of the gift tax credit, it may sometimes be profitable to make gifts in contemplation of death deliberately. This is because the amount paid as gift tax will be removed from the gross estate (i.e., the gross estate will comprise only the amount of the gift plus the property owned by the donor after payment of the gift tax), but will nevertheless be allowed as a credit against the estate tax. See page 1136 supra.

See Neuhoff, Credit Against Estate Taxes for Gift Taxes Paid, 9 Prac. Law. 45 (1963).

4. *Credit for Tax on Prior Transfers: §2013*

If the decedent (the "transferee") received property from another decedent (the "transferor") and dies within ten years of the transferor, the transferee's estate is allowed a credit under §2013 for the estate tax paid (as defined and adjusted by §2013) by the transferor's estate with respect to the previously taxed property. This credit is the descendant of a provision that came into the estate tax law in

1918, as a result of a recommendation by the House Committee on Ways and Means:

It has come to the attention of the committee that persons closely related have died within such a short space of time that the estate passing within a short period of time has been subjected to the estate tax and thereby diminished unreasonably because of the short period within which the two levies have been made. For example, a husband dies leaving a large amount of property to his wife, an elderly woman, who dies within a few weeks after her husband's death. Under existing law the entire estate is taxed on the transfer from husband to wife and on the transfer from wife to other beneficiaries. [H.R. Rept. No. 767, 65th Cong., 2d Sess., reprinted in 1939-1 C.B. (Part 2) 86, 102.]

To prevent the undue depletion of a family fortune by two estate taxes within a brief period of time, §2013 of the 1954 Code permits the transferee's estate to take a credit for an appropriate portion of the estate tax paid by the transferor's estate. In computing the credit, it is necessary first to determine the amount of federal estate tax attributable to the transferred property in the transferor's estate (the "first limitation" of Regs. §20.2013-2). Then the amount of tax attributable to the transferred property in the transferee's estate is computed (the "second limitation" of Regs. §20.2013-3). The credit actually allowed is the lesser of the two amounts just described, except that if the transferee died more than two years after the transferor the amount to be allowed is reduced on a sliding scale by §2013(c). Only 80 per cent of the normal amount is allowed if the transferee died more than two years but less than four years after the transferor, with further reductions to 60 per cent (transferee's death four to six years after transferor's), 40 per cent (six to eight years), and 20 per cent (eight to ten years). No credit is allowed if the transferee survives the transferor by more than ten years.

The credit (determined by applying the "first" and "second" limitations described above) is also allowed if the transferee's death *preceded* the transferor's by not more than two years. Thus, if A received a gift of property from B in 1963 and died in 1964, his estate would be entitled to a credit under §2013 if B died in 1965 and the property was included in B's gross estate under §2035 (gifts in contemplation of death). The credit would be claimed by A's estate on an amended return since the facts necessary to compute it would probably not have been known when A's return was filed.

To qualify for a credit under §2013, the previously taxed property itself need not be owned by the transferee at the time of his death, nor need it be otherwise includible in his gross estate, since the "second limitation" is applied by computing the difference between the net estate tax payable on the transferee's estate and the amount that would be payable if the value of his estate were reduced by the amount of the transferred property. In effect, it is assumed that the transferee's estate was augmented by the previously taxed property whether he saved it and used his other property for living expenses, or vice versa.

No credit is allowed for any gift tax that may have been paid on property that was transferred to the decedent, no matter how short the interval between the gift and the transferee's death.

See Rudick, The Estate Tax Credit for Tax on Prior Transfers, 13 Tax L. Rev. 3 (1957), characterizing §2013 as "the most complex and confusing provision of the estate tax law." See also Rev. Rul. 59-9, 1959-1 C.B. 232 (decedent as life tenant of a trust established by his father may take a credit for tax paid by father's estate on actuarial value of life estate at father's death, even though transfer did not result in tax on transferee decedent's estate); Rev. Rul. 59-123, 1959-1 C.B. 248 (where decedent's estate was entitled to marital deduction and paid no estate tax, and surviving widow died within short time, the husband's estate may

not waive the marital deduction in order (a) to establish a tax liability on his estate that can be credited by widow's estate and (b) to reduce size of widow's estate); Rev. Rul. 59-73, 1959-1 C.B. 234 (method of computing credit when prior estate received a credit under §2012 or §2013); United States v. Denison, 318 F.2d 819 (5th Cir. 1963) (no credit where prior decedent's estate paid no tax).

Section 2013 is a complete revision, enacted in 1954, of §812(c) of the 1939 Code, which permitted the value of property that had been previously taxed within a five-year period to be deducted from the decedent's estate. The deduction was available whether the prior tax was an estate tax or a gift tax, but it was allowed only if the previously taxed property could be "traced" into the decedent's estate. It was not allowed for transfers between husband and wife, and it was subject to many other complex adjustments. The 1954 changes seem to be an amalgam of the proposals made in Rudick, The Estate Tax Deduction for Property Previously Taxed, 53 Colum. L. Rev. 761 (1953), and Bittker and Frankel, Previously Taxed Property and the Federal Estate Tax, 8 Tax L. Rev. 263 (1953), which copiously annotate the shortcomings of the pre-1954 law.

CHAPTER 16
Valuation of Property

Section 2031(a) provides that the value of the decedent's gross estate "shall be determined by including the value . . . at the time of his death of all property . . ." But §2032 permits the estate, if the executor so elects, to be valued as of one year after the decedent's death.

The Code does not prescribe a method of arriving at the "value" of included property. There is a vague provision for unlisted securities, §2031(b), said to be declaratory of earlier law in Colonial Trust Co. v. Kraemer, 63 F. Supp. 866 (D. Conn. 1945). The Regulations on the subject of valuation (Regs. §20.2031), however, are rather elaborate.

The Code is equally laconic in respect of the gift tax. Section 2512(a) provides: "If the gift is made in property, the value thereof at the date of the gift shall be considered the amount of the gift." The principles of valuation set out in the gift tax Regulations (Regs. §25.2512) are virtually identical with those prescribed by the estate tax Regulations.*

Active stocks and bonds. The Regulations (§20.2031-2) provide that if there is a market for stocks and bonds, on a stock exchange, over-the-counter, or otherwise, their value shall be determined by taking the mean between the highest and lowest selling prices on the valuation date or, if there were no sales on that date, by taking the means for the nearest dates before and after the valuation date and interpolating for the valuation date. If sales are not available for a date within a reasonable period from the valuation date, bid and asked prices may be substituted.

The Regulations go on to provide that if the value of the stocks or bonds as thus determined "does not reflect the fair market value thereof, then some reasonable modification of that basis or other relevant facts and elements of value are considered in determining the fair market value." §20.2031-2(e). The Regulations then acknowledge that the size of the block of securities to be valued may be relevant. In a number of cases taxpayers have been successful in establishing a fair market value below the quoted prices. Havemeyer v. United States, 59 F. Supp. 537 (Ct. Cl. 1945), cert. denied, 326 U.S. 759 (value for gift tax of one stock, $25 instead of quoted price of $28; of another, $22 as against $24.50); Helvering v. Maytag, 125 F.2d 55 (8th Cir. 1942), cert. denied, 316 U.S. 689 ($3.10 as against $4.75); Helvering v. Safe Deposit & Trust Co., 95 F.2d 806 (4th Cir. 1938) ($35 as against $44); see also Montgomery, Federal Taxes — Estates, Trusts and Gifts, 1947-1948, pp. 604-606. Cases of this type have stressed the depressing effect on the market of a sale of a large block of stock. Why is this fact relevant? What of the possibility of realizing the price quoted on the valuation date by engaging a "skillful broker" to dispose of the stock over a period of time? See Bull v. Smith, 119 F.2d 490 (2d Cir. 1941); see also Newberry v. Commissioner, 39 B.T.A. 1123, 1130-1131 (1939). What if such a marketing process could obtain *more* than

* Valuation problems are not, of course, unique to the estate and gift tax field. In applying the income tax, it is often necessary to determine the value of property, e.g., when it is received as compensation, as payment for other property, as a liquidating distribution in partial or complete liquidation of a corporation or redemption of its stock, etc. See Burnet v. Logan, supra page 457

the quoted price? Note that the Regulations speak of "a willing buyer and a willing seller." Granted that a large offering would depress the market, what of the fact that a large demand — "a willing buyer" — would improve it? See Freeman and Vinciguerra, Blockage Valuation in Federal Tax Law, 94 U. of Pa. L. Rev. 365 (1946); Barrett, Valuation of Stocks by the Blockage Rule, 29 Taxes 465 (1951).

Does the portion of the Regulations quoted in the preceding paragraph permit the taxpayer (or the Commissioner) to show that, although the stock could have been sold without difficulty at the quoted price, the estate tax value should be lower or higher because the market price was influenced by groundless hopes or fears of investors?

Inactive stocks and bonds. When there is no recognized market for the securities, the Regulations (§20.2031-2(f)) provide that a variety of "relevant factors" shall be considered, including the goodwill of the business, the economic outlook in the particular industry, the company's position in the industry and its management, and the value of comparable securities. The student will recognize that he is here being beckoned into a morass. Some guideposts, together with a frank warning of the treacherous underfooting, will be found in 2 Paul, Federal Estate and Gift Taxation, c. 18 passim (1942).

The principal problem in the case of closely held businesses (whether incorporated or not) is the value of goodwill. Typically, the estate approaches this issue by arguing that the decedent was the dominant personality in the business, and that his death makes its future success, indeed its very existence, problematical, with the result that there is little or no goodwill to be valued. The government, on the other hand, is inclined to argue that the decedent was in virtual retirement for some time so that his death deprived the business of none of its value. See Gannon's Estate v. Commissioner, 21 T.C. 1073 (1954) (no goodwill survived decedent's death); Danley v. Deal, 48 A.F.T.R. 1574 (N.D. Ala. 1954) (goodwill survived); see also Rothrock v. Commissioner, supra page 1052; Rev. Rul. 60-301, supra page 576 (re goodwill of professional firm).

If the goodwill of the business survives the decedent, it is sometimes valued by the "capitalization of surplus earnings" method described in A.R.M. 34, C.B. No. 2, 31 (1920). The fair market value of the plant, machinery, equipment, and other visible assets of the business is computed and a reasonable rate of return (e.g., 8 to 15 per cent) on these assets is determined; this return is then subtracted from the average annual earnings of the business over a reasonable past period (e.g., 5 to 10 years), and the balance (the "surplus earnings") is then capitalized at a rate that gives effect to the risks of the business (e.g., 20 per cent). Although the A.R.M. 34 method of valuing goodwill may appear at first glance to supply a formula capable of mechanical application, in point of fact it opens the door to a series of arguments over the proper rate of capitalization, etc.; and its basic assumption — that past earnings can be projected into the future — is almost invariably questioned in whole or in part. Experts using this method can arrive at quite divergent ultimate conclusions, and their estimates may be even farther apart if they also employ book value, values of allegedly comparable businesses, and other factors as a guide. See Kelly's Estate v. Commissioner, ¶55,129 P-H Memo T.C., in which the shares of common stock of a closely held publishing company were variously valued at $516 (estate tax return), $1000 (revenue agent), $4000 (90-day letter), $980 (taxpayer's first expert), $822 (taxpayer's second expert), $1320 (taxpayer's third expert), $4000 (government's first expert), $3400 (government's second expert), and $2200 (the court).

For an extended statement by the Internal Revenue Service of the proper way to value the stock of closely held corporations, see Rev. Rul. 59-60, 1959-1 C.B. 237, stating that the factors to be considered include: nature of the business and

its history from "inception"; economic outlook "in general" and in "the specific industry in particular"; book value and financial condition of the business; earning capacity; dividend paying capacity; and any goodwill or other intangible value of the business. See also Polasky, Planning for the Disposition of a Substantial Interest in a Closely Held Business, 44 Iowa L. Rev. 83 (1958); Sprecher, The Valuation of Stock in a Closely-Held Corporation for Federal Gift and Estate Tax Purposes, 31 Ky. L.J. 325 (1942); Rice, Valuation of Close Held Stocks: A Lottery in Federal Taxation, 98 U. of Pa. L. Rev. 367 (1950); Johnson, Shapiro and O'Meara, Valuation of Closely-Held Stock for Federal Tax Purposes: Approach to an Objective Method, 100 id. 166 (1951).

Other property. The Regulations deal, though briefly, with the valuation of real estate, notes, and household and personal effects,* and contain tables for computing the value of annuities, remainders, etc. Tables and formulas for valuing more complex future interests are provided by Actuarial Values for Estate and Gift Tax (I.R.S. Publ. No. 11, 1959). See Nourse v. Riddell, 143 F. Supp. 759 (S.D. Calif. 1956), where the taxpayer succeeded in using mortality tables that were more favorable to his claim than the tables employed by the Treasury.

For the value of life insurance, see Guggenheim v. Rasquin, supra pages 1248 et seq.

On the effect of events occurring after the decedent's death, see Gowetz v. Commissioner, supra page 1276; Goodman v. Granger, supra page 1084. See also Bankers Trust Co. v. United States, 284 F.2d 537 (2d Cir. 1960), cert. denied, 366 U.S. 903, holding that U.S. bonds that could be used by the executor at their par value to pay the federal estate tax were to be valued at par rather than at market value (which was lower).

Property transferred during decedent's life. For the time as of which property transferred during the decedent's life is to be valued, see Frizzell's Estate v. Commissioner, supra page 1137 (gifts in contemplation of death).

Optional valuation date. Section 2032 permits the executor to value the estate as of one year after the decedent's death, instead of using the value on the date of death. This provision, enacted in 1935, is intended to prevent the confiscation of estates when market values decline abruptly after the decedent's death. The House version of the 1954 Code would have permitted the optional valuation date to be used only if there was a decline of one third of the estate's value between the date of death and the optional date. The Senate eliminated this restriction, and §2032 as enacted is a restatement of §811(j) of the 1939 Code.

The provision produces a welter of difficulties, partly because adjustments must be made for property that has been distributed or sold between the date of death and the optional valuation date, as well as for property that "is affected by mere lapse of time." Section 2032(a)(2) and (3); see also Maass v. Higgins, 312 U.S. 443

---

* The taxpayer purchased a diamond ring and a pair of diamond ear clips for $200,000 plus federal excise tax of $40,000 and gave them to her daughter a few months later. Should the federal excise tax be taken into account in determining the value of the property in computing the gift tax? What weight should be given to the fact that a private owner could not sell such jewelry at the same price, or as easily, as a dealer? If the jewelry had been purchased in order to make the gift, should the gift tax be computed as though the donor had made a gift of cash to enable the donee to purchase the jewelry? What if the jewelry had been purchased for the donor's own use, but she changed her mind a few weeks later and gave it to her daughter? See Publicker v. Commissioner, 206 F.2d 250 (3d Cir. 1953), cert. denied, 346 U.S. 924 (1954); Duke v. Commissioner, 200 F.2d 82 (2d Cir. 1952), cert. denied, 345 U.S. 906 (1953). After these decisions, the Regulations for the first time referred to this subject. §25.2512-7.

Revenue Rul. 55-71, 1955-1 C.B. 110, states that the federal excise tax is "a relevant factor" in determining fair market value for estate tax purposes because it is "an item which will tend to increase the amount at which . . . an estate would be willing to sell such property."

(1941). What if an extraordinary cash dividend is declared, with the consequence that the shares owned by the estate are of substantially less value on the optional valuation date than on the date of death? What of stock dividends? See Regs. §20.2032-1(d)(4); Schlosser's Estate v. Commissioner, 277 F.2d 268 (3d Cir. 1960) (stock dividends are includible at value on optional valuation date). Where the optional valuation date is elected by the executor, it is also controlling in determining the beneficiary's income tax basis under §1014(a). May the executor use whichever date produces the *higher* value, so as to produce a higher income tax basis for the beneficiaries of the estate? The Internal Revenue Service states that he can, if the value of the gross estate at death was more than $60,000. Rev. Rul. 56-60, 1956-1 C.B. 443.

Income tax basis of inherited property. For the effect of the estate tax valuation on the heir's income tax basis, see page 1074 supra.

BONBRIGHT, THE VALUATION OF PROPERTY*

Vol. 2, pp. 694-696 (1937)

With death duties as with other taxes, one properly looks to the economic or ethical basis of the tax for light on the meaning of "value of the property." But, perhaps more than with any other tax, there is the greatest difference of opinion as to what this basis is. Indeed, as judgment has become more nearly unanimous that the tax is socially desirable, it has become more divergent as to *why* it is desirable. A recent staff report to a Joint Congressional Committee lists nine different economic principles on which various experts have defended the death taxes. These principles include various forms of the old doctrines of "benefit" and of "ability to pay," with additional defenses based on the argument for diffusion of wealth and on the desirability of handicapping the acquisition of wealth except as a reward for the accomplishment of socially useful work. The prevalent view among economists is that no single principle can be accepted to the exclusion of all others, and that the merits of any particular death duty must be judged by reference to a host of probable economic and social consequences.

This last conclusion does not make the task of the theorist an easy one. But so far as concerns the choice of a proper basis of appraisal, the problem is not quite so complicated as might be assumed. For the appraisal is only one of the factors determining the amount of the tax, and its proper basis is not necessarily affected by the precise rationale of the tax. For example, the assumed utility of an inheritance tax as a preventive of enduring family fortunes would hardly suggest a different basis of valuation from that suggested by the principle of "ability to pay."

Without taking a positive position, therefore, on the economic philosophy of the death duties, one may still reach tenable conclusions as to the proper methods of valuation. The basis for such conclusions is to be found in the fact that the burden of the tax falls on the beneficiaries, even if the tax is paid by the executors out of the estate as such. "Value of the property" should therefore be interpreted to mean (or to be an approximate index of) that value which is significant to the beneficiaries — in short, a special form of the concept of "value to the owner." Clearly, the worth of the estate to the decedent is of no consequence here. But equally truly, its market value, in the strict sense of the price at which it might be sold to any outside party, is irrelevant save as a possible measure of the value of the property to those who inherit it.

This last assertion, however, needs further defense, since it would be vigorously

---

* Published by the McGraw-Hill Book Company, Inc. Reprinted by permission.

denied by many writers, and since it seems to run counter to current statute law and common law. The point is made that a death duty, unlike an annual levy under the general property tax, is usually paid by a liquidation of a portion of the estate itself — often a very considerable portion. Moreover, much of the decedent's remaining property must be sold by the executors, partly as a means of paying the expenses of administration, partly as the only feasible method of distribution among the beneficiaries. If the estate has been left in trust, still further liquidation may be called for in order to make the investments qualify for trust funds. Under these circumstances, it is argued, an appraisal under the death duties requires a strict adherence to the standard of market value, defined, not in the traditional but vague sense of a "fair selling price," but as the price, fair or unfair, which the property would actually command if presently offered for sale in the manner available to executors and trustees.

This position has much force — so much so as to justify fewer departures from a market-value standard than are warranted in most other fields of taxation. But it does not constitute an argument for the abandonment of value to the owner as the *ideal* basis of valuation. Instead, it amounts in effect to the sound contention that this latter value is often *measured* by market value, without reference to the special adaptability of the property to the various beneficiaries. For if we grant that the executors or trustees will in fact sell the assets of the estate to outsiders, we must also grant that these assets are worth nothing to the beneficiaries except for their realization value.

Because a valuation based on market price is so *generally* the best available measure of the value of the assets to the beneficiaries themselves, its adoption is justified as a matter of administrative convenience even in many instances in which the assessor has reason to believe that the assets will not in fact be liquidated and that they will come into the possession of beneficiaries to whom they will have a value in excess of their sale price. A frankly crude but workable basis of assessment is preferable to a theoretically refined basis, too complex for ready administration.

But with certain types of inheritances, the discrepancy between the price at which the property could be sold to outsiders, and the value of the property to its beneficiaries, is so wide that it cannot be ignored; and here the market-value standard should be abandoned. The most conspicuous examples in point are those of life estates, remainders, and other forms of divided interests that are literally or practically unsalable. In practice, properties of this nature are valued on actuarial principles discussed in a later section. These appraisals do not reflect market values. Their validity rests solely on their merits as a rough-and-ready measure of the value of these unmarketable properties to their inheritors; and this point is recognized, in effect if not in words, by the opinions of the courts.

Even with marketable forms of property, the assessor is often faced with a significant discrepancy between the price at which the property could be sold and its special value to a beneficiary. An example in point is to be found where the estate contains a large block of stock, which may be readily sold only at a discount from the current market price of 100-share lots, but which may be worth even more than this current market price to the beneficiary, for purposes of controlling an enterprise. This situation gives rise to the "blockage problem," discussed later. Here we are noting simply that, even under the death duties, market value, defined in any one precise sense, is not the *ideal* basis of valuation.

NOTE

Valuing shares of mutual funds. In 1963, the estate and gift tax regulations were amended to provide that the value of shares of mutual funds is the "public offering price"; previously, the field offices had evidently sometimes used the redemption value or the mean between that and the offering price. Regs. §20.2031-8(b); §25.2512-6(b); see also Rev. Proc. 64-18, 1964-17 I.R.B. 31 (for gifts or deaths before promulgation of new regulations, redemption value or mean between it and offering price will be accepted if all interested parties agree to use the same value for income tax purposes).

Does use of the public offering price reflect Bonbright's theory that "value to the heirs" is the appropriate value for death tax purposes?

HIPP v. UNITED STATES

215 F. Supp. 222 (W.D.S.C. 1962)

MARTIN, Chief Judge.

These actions were brought by B. Calhoun Hipp and his wife, Jean Jones Hipp, to recover Federal Gift Taxes paid by them for the calendar year 1956 in the amount of $1,501.40 each. . . .

The cases concern the narrow question of the *value* of the income to a trust for a period of ten years.

On December 20, 1956, B. Calhoun Hipp executed a trust agreement by which he transferred 500 shares of the common capital stock of Liberty Life Insurance Company to The Greenville Branch of the South Carolina National Bank of Charleston, South Carolina, as Trustee. The trust agreement provided that for the period beginning December 20, 1956, and ending December 31, 1966, the net income from the trust be paid to unspecified charities, and upon the expiration of that period the trust corpus be distributed to the children of the taxpayers. The agreement vests in the trustee unlimited discretionary powers to sell the trust assets and to invest the proceeds from such sale in other assets. The trust agreement encompasses two gifts. The gift of the income from the trust for a ten-year period is given to charity and the corpus is given to the taxpayers' children to be paid at the end of the term. For Federal Gift Tax purposes, the gift is considered as made one-half by B. Calhoun Hipp and one-half by his wife, Jean Jones Hipp. A taxpayer is entitled to deduct gifts to charities from the total gifts he makes during any one year.

Each taxpayer filed a timely Federal Gift Tax Return for the year 1956, reporting the gift in trust. On the returns, the taxpayers assigned a market value of $150 per share to the Liberty Life stock or an aggregate value of $75,000 for the 500 shares, then deducted from this amount the purported value of the ten years' income interest given to charity. The taxpayers computed the value of the income interest in accordance with the method prescribed by Treasury Regs. §25.2512-5. The method so prescribed is to multiply the market value of the shares of stock by the factor set forth in Column 3, Table II, Treasury Regs. §25.2512-5. This computation resulted in an assigned value of $21,831.08 (75,000 × .291081 [factor for ten-year term prescribed in Column 3 of the Table]).

Upon audit of the returns, the Commissioner of Internal Revenue determined that the market value of the stock at the date of the gift was $159 per share. Pursuant to this determination, the Commissioner assessed deficiencies[1] in gift tax against each of the taxpayers and on September 8, 1958, the taxpayers each paid

[1] In computing the deficiencies the Commissioners used the method of valuing the gift to charity as used by the taxpayers which was the method prescribed by the regulations.

the additional gift tax in the amount of $237.10, plus interest. Subsequently, on April 15, 1960, the day on which the statute of limitations against assessment of additional gift tax against the plaintiffs for the year of the gift would otherwise expire, the Commissioner sent to each of the taxpayers a statutory notice of deficiency proposing a further deficiency in Federal Gift taxes for the year 1956 in the amount of $1,251.58. On August 26, 1960, the taxpayers paid this second deficiency, plus interest, in the amount of $249.82.

The basis for this second deficiency determination was explained in the notices to the taxpayers which read:

> Factor .291081 for the value of a term certain for ten years (.291081 × value of corpus) does not apply because this factor is based on a return of 3½% whereas the expected return on this gift of $1.00 per share is considerably less than a return of 3½%.

The method substituted by the Commissioner was to treat the gift to charity as an annuity of a fixed and definite dollar amount equal to the annual cash dividend being paid on Liberty Life Insurance Company common stock at the date of the gift. This method assumed income to the trust of $1.00 per share for ten years discounted by 3½% compounded annually. The computation of the value is as follows: 500 × 1.00 = $500 × 8.3166[2] = $4,158.30.

Claims for refund of the second deficiency assessments were filed with the District Director of Internal Revenue for the District of South Carolina on September 22, 1960. On December 27, 1960, the District Director formally rejected each of the claims for refund and these actions followed.

At the time the trust agreement was executed B. Calhoun Hipp was a director and the Administrative Vice-President of Liberty Life and held 15.1% of the outstanding shares of common stock of the company. The other major stockholders of the company are two brothers of B. Calhoun Hipp and a sister. Collectively, the Hipps control more than fifty per cent of the voting stock of the company.

The value of most gifts are determined by the market value. Market value is defined by Treasury Regs. §25.2512-1 as:

> The value of the property is the price at which such property would change hands between a willing buyer and a willing seller, neither being under any compulsion to buy or sell, and both having reasonable knowledge of the relevant facts. . . .

This approach cannot be used, however, when the property to be valued is not purchased and sold on the market. In such cases the value is determined by methods prescribed by [Regs. §25.2512-5].

The problem before the Court is to determine whether the value of the income interest is determined by the regulation or whether the regulation does not apply and some other formula should be used. The Government argues that the regulation is not applicable on the ground that the table is designed for use where there is an absence of facts and that there are facts in the present case which establish the value of the income interest. If the actual value of the income interest can be determined with any degree of certainty, the method of valuation prescribed by the regulation is not applicable.

The Government argues that during the period from 1952 through 1956, 500 shares of Liberty Life stock produced $500 per year in earnings and that as of the date of the gift this earning record was expected to continue during the next ten years. If we assume that 500 shares of stock were placed in a trust in 1952, the yield produced is as follows:

---

[2] The factor was obtained from Column 2 of Table II of Regs. §25.2512-5(f).

1952 —	$1,000.00
1953 —	" "
1954 —	" "
1955 —	" "
1956 —	" "

This increase in dividends was caused by a 100% stock dividend in March 1952 so that the imaginary trust would have held 1,000 shares of stock after the dividend date and the income to the trust would have been $5,000.00. Percentage-wise, upon an initial investment of $49,500 [the market value of the stock on January 1, 1952], the yield would have been 2%. The Government contends that the percentage of yield would have been .62% but this computation is based only on the cash dividends and does not take into account the increase in income by reason of the increase in the number of shares held by the trust during the period.

The Government also argues that the use of the regulation would be unreasonable in this particular case on the ground that the taxpayers must show the probable yield per share as of 1956 was 3½%. Further, it is argued that the highest yield in the preceding ten-year period was $2.45, 56% less than the $5.56 average required. This argument encompasses a comparison of uncomparables. It compares an average dividend of $2.45, during a period when the fair market value of the stock at the beginning of the period was $42.00 with an average assumed dividend of $5.56 during a period when the fair market value of the stock was $159. When the two amounts are reduced to comparables, i.e. percentages, a different picture is presented. During the period from 1944 to 1953, although the average yield was only $2.45 per year, the percentage yield based on the fair market value at the beginning of the period was 5.83% [$2.45 dividend divided by $42 market value] as compared with 3½% which is taken from the table. Then too, the Government's computation does not take into account the stock dividends paid in 1944, 1947 and in 1952.

It is well settled that the determination of the Commissioner is presumptively correct and such determination is binding upon the Court if it is supported by substantial evidence but where the method pursued by the Commissioner is erroneous, the presumption of the correctness of the determination no longer avails. Clinton Cotton Mills v. Commissioner (4th Cir., 1935), 78 F.2d 292.

In the present case it is obvious that the Commissioner's determination in computing the second deficiency against the taxpayers did not take into account the actual earnings of Liberty Life stock during the four-year period upon which it based the projected earnings of the trust during the period the trust was to produce income for the benefit of charities. As explained above, the Government erroneously assumed that one share of Liberty Life stock produced $1.00 in income per year during the four-year period which served as the base period for projecting the expected income, and did not take into account the fact that in the first year of the base period, the company declared a 100% stock dividend so that during the period an imaginary trust would have earned $2.00 on each share which it held at the outset of the period. This erroneous approach by the Commissioner destroys whatever presumption his determination would ordinarily carry.

The valuation of future interest is at best a highly speculative undertaking not unlike the determination of life expectancy which courts and juries are called upon to make in almost all personal injury actions. Recognizing that the value of future interest cannot be determined with any degree of certainty, those called upon to make valuations have resorted to established computations which seldom

accurately predict the value in a particular situation but prove to be accurate when used in a great number of instances. In McMurtry v. Commissioner (1st Cir., 1953), 203 F.2d 659, where the Government successfully opposed the taxpayer's effort to depart from the regulations, Chief Judge Magruder stated:

> . . . The whole problem of valuing individual life interests by resort to mortality tables is at best a matter of educated guesswork. The courts cannot demand perfection in an area so fraught with speculation and uncertainty . . . [page 666.]

In Gelb v. Commissioner (2d Cir., 1962), 298 F.2d 544, the Court said:

> Yet the use of actuarial tables for dealing with estate tax problems has been so widespread and of such long standing that we cannot assume Congress would have balked at it here; the United States is in business with enough different taxpayers so that the law of averages has ample opportunity to work. [page 551.]

In Bowden v. Commissioner (5th Cir., 1956), 234 F.2d 937, the Court quoted with approval the following language from McMurtry v. Commissioner:

> We think, therefore, that tables which have enjoyed such widespread and long-standing use should not be rejected as wholly unreasonable, even though they may perhaps be susceptible of minor improvements in particular respects. Such discrepancies as may exist will no doubt average out in the long run; and while this may sometimes prove to be unfortunate for individual taxpayers, the discrepancies may have to be suffered in the interest of a simplified overall administration of the tax laws. [page 941.]

The Government argues, and the taxpayers concede, that where the facts show that a valuation can be made in a particular case with exactitude, the tables should not be used. In the present case, however, the valuation of the gift cannot be determined with any degree of certainty. Certainly it would be incorrect to say that each share of stock will produce $1.00 in income during the period of the trust. It may well be that the income will prove to be less than the return anticipated by the regulation but the Court cannot establish the value of the income interest.

A brief résumé of the history of Liberty Life will show how difficult it is to determine income from its common stock during the period of the trust.

On January 1, 1941, Liberty Life Insurance Company had issued an outstanding 40,000 shares of its common capital stock. By reason of stock dividends paid in November 1942, October 1944, October 1947 and March 1952, the number of shares outstanding on the date of the gift had increased to 200,000 shares. Each time the company paid a stock dividend it maintained essentially the same cash dividend rate per share, with the result that issuance of stock dividends caused increases in cash dividends paid to the shareholders.

Since 1939, when the capital stock of Liberty Life was first offered to the public, the company had consistently paid regular cash dividends. The amount of the cash dividends had substantially increased over the years prior to 1956.

On December 20, 1956, Liberty Life Insurance Company had behind it a record of continuing growth and prosperity. During the period 1941-1956 its net investment profit, net earnings, book value, insurance in force, and total assets, had all increased by more than 1000%. On the date of the gift, shares of outstanding stock were held by 892 shareholders; there was something over $817,649,814.00 of insurance in force; and the total assets of the company were in excess of $92,-284,068.45. On the date of the gift, there was reason to believe that the company would continue to enjoy rapid growth and expansion.

In every ten-year period in the history of Liberty Life, prior to the date of the gift, the amount of cash dividends paid to stockholders had significantly increased. The average annual cash dividends paid to stockholders of Liberty Life

during the seven ten-year periods, commencing with the period 1941-1950, and ending with the period 1947-1956, expressed as a percentage of the fair market value of the stock at the beginning of each period, ranged from a high of 7.18% to a low of 2.47% and averaged 4.51% for all such periods.

The management and board of directors of the company, and the investing public, anticipated at December 20, 1956, that cash dividend payments by the company would be increased substantially during the ten-year period subsequent to December 20, 1956. The management and board of directors anticipated that, in addition, there would be in early 1957, an increase in cash dividends. Taxpayers' witnesses testified, that it was not unreasonable to forecast an average annual return of 3½% on Liberty Life stock during the period the trust was to exist. Mr. Charles D. Behrens, Executive Vice-President and a Director of Moody's Investors Service who gave testimony during the trial, testified that he had made a careful study of Liberty Life and based on his knowledge and experience a return of 3½% on Liberty Life stock during the period of the trust would be within the range which could be expected.

The Government relies on Hamm v. Commissioner, ¶61,347 P-H Memo T.C. (1961). In that case Mr. Hamm executed on July 1953, two written trust agreements by which he designated himself to be the sole trustee and providing that the income interest accruing to each trust should be paid to the Hamm Foundation, a charitable organization, until March 1, 1964. In December 1953, petitioner executed a first addendum to each trust, by which he made gifts of the stock of United Properties Inc., a family investment and holding corporation to each of the trusts. By such addendums, petitioner transferred 130 shares to Trust I and 133⅓ shares to Trust No. II.

One of the questions presented in the case was whether the petitioner was entitled to a charitable deduction for the gifts of income to be derived from the shares of United to the Trusts. The Court held that at the time of the gifts it was improbable that the charity, (Hamm Foundation) would ever derive any net income in respect to the gifts involved. The Court said:

> It would not be proper in our opinion, in the circumstances of the instant case, to value the 10-year income interest of the Hamm Foundation through use of the table contained in the respondent's Gift Tax Regulations, which is provided for use in valuing certain estates for life or for terms of years. In the instant case, as above shown, there was no probability that charity would ever take anything; and hence it would be wholly unrealistic to apply the table here. Said table assumes an annual yield of 3½ percent; but in the instant case, any yield whatsoever on United's common stock was wholly improbable, and likely to be nil. . . . This Court has held that where the probable yield is either significantly greater, or significantly less than the yield assumed in the table, then regard should be had to the actualities of the particular case, rather than to the assumption built into the table.

The facts in the *Hamm* case places it squarely in the exception set forth by Regs. §25.2522(b) which provides:

> . . . The deduction is not allowed in the case of a transfer in trust conveying to charity a present interest in income if by reason of all the conditions and circumstances surrounding the transfer it appears that the charity may not receive the beneficial enjoyment of the interest. For example, assume that assets placed in a trust by the donor consists of stock in a corporation, the fiscal policies of which are controlled by the donor and his family, that the trustees and remaindermen are likewise members of the donor's family, and that the governing instrument contains no adequate guarantee of the requisite income to the charitable organization. Under such circumstances, no deduction will be allowed. Similarly, if the trustees are not the donor's family but have no power to sell or otherwise dispose of closely held stock, or otherwise insure the requisite enjoyment of income to the charitable organization, no deduction will be allowed.

There is no contention by the Government that the exception applies to the present case.

The facts in the *Hamm* case are far different from those before the Court in the present actions. In the *Hamm* case, the circumstances affecting the Corporation, United, made it unlikely that there would be any payment of dividends at all to the trusts. The trustee to whom the dividends were to be paid was an officer of the corporation. Here, there is every reason to believe that the dividends from Liberty Life stock will be available for gifts to charity.

After a careful study of the evidence presented in the case relating to the income possibilities of Liberty Life stock and the power conferred upon the trustee to sell the corpus assets and reinvest the proceeds in other assets, the Court is convinced that any valuation of the income interest would be little better than a guess. In such a case it is clear that the method prescribed by the regulation should be used.

NOTE

1. *Dividend policy of closely held corporation.* If the directors of the corporation (who presumably can be elected by the Hipp family by virtue of its ownership of more than 50 per cent of the corporation's voting stock) caused the corporation to reinvest its earnings during the ensuing 10-year period rather than to pay dividends, and their action was not so flagrant as to constitute an actionable breach of their fiduciary obligation to the shareholders, could the charitable deduction be retroactively disallowed? In the case itself, a withholding of dividends would have had important business ramifications, since there were 892 shareholders, and the trust owned only a small fraction of the outstanding shares. What if all the stock had been owned by the taxpayers, and they had transferred a substantial block in trust? Consider also the alternative possibility: a transfer of stock of a family corporation in trust (inter vivos or at death), income to go to the transferor's children for life, remainder to chairities. If the children or other members of the donor's family can control the corporation's dividend policy, and its net worth is represented almost entirely by earned surplus, available for the payment of dividends, can the charitable deduction be computed as in the *Hipp* case?

2. *Mortality tables.* Although the courts have adhered to the mortality tables in determining the life expectancy of a life tenant as of the valuation date even though he died before his time, the tables are not necessarily controlling if there is evidence that his health was substantially below average on the valuation date. Compare Ithaca Trust Co. v. United States, 279 U.S. 151 (1929) (widow's life expectancy on date of death is controlling in computing value of charity's remainder interest, despite her death within six months after decedent's death); with Hoelzel's Estate v. Commissioner, 28 T.C. 384 (1957) (widow incurably ill when decedent died; held, her actual life expectancy rather than mortality table is controlling in computing marital deduction), and cases there cited.

On the possibility that actuarial tables (e.g., on the likelihood of remarriage or having children) may be unreliable in a particular case because the very financial interest that is to be valued provides the person in question with an incentive to depart from the average pattern, see *Sternberger's Estate,* supra page 1284.

UNITED STATES v. LAND
303 F.2d 170 (5th Cir. 1962)

Before Rives and Wisdom, Circuit Judges, and Carswell, District Judge.

Wisdom, Circuit Judge.

These cases pose a problem in the valuation, for federal estate tax purposes, of a partnership interest subject to a restrictive agreement limiting the sales price of the interest to two-thirds of its value in the event of its sale during the partner's lifetime. The district court agreed with the taxpayers that the restriction limited the valuation to two-thirds of the property's calculated net value. We

reverse. A restriction on the value of a partnership interest that expires at the decedent's death cannot affect the valuation of the interest for estate tax purposes.

The decedents, John Robert Land and his father, Robert Land, were members of a family partnership, Land Brothers & Company, formed in 1939 to engage in the general merchandise business in Melvin, Alabama. The partnership agreement provided that if any member wished to withdraw from the partnership during his lifetime the other partners would have the option of purchasing his interest at two thirds its calculated value. At the death of a partner, the surviving partners became entitled to purchase his interest at its full value; if they did not do so, the partnership would be dissolved and its assets liquidated and distributed. John Robert Land died January 5, 1955. His father died a few months later. In reporting the value of each decedent's partnership interest the executors reduced the fair market value by one-third on the theory that value is determined before death and that the restriction controlled the valuation for federal estate taxes. There is no dispute as to the value of the interests apart from the controversy over the effect of the restriction in the partnership agreement.

The taxpayers rely primarily on the Supreme Court's pronouncement in Edwards v. Slocum, 1924, 264 U.S. 61, that the object of an estate tax is "not the interest to which some person succeeds on a death, but the interest which ceased by reason of the death." This reliance is misplaced. This is another instance of the truth of Justice Holmes's observation that there is "danger [in] reasoning from generalizations unless you have the particulars which they embrace in mind." [1] As other courts have pointed out in[2] referring to Edwards v. Slocum, the Supreme Court described the estate tax as one on "the interest which ceases by reason of the death" simply to distinguish it from a succession tax, which is calculated and graduated on the individual portion of the estate each heir or legatee receives rather than on the aggregate property passing from the decedent. Edwards v. Slocum did not involve the valuation of property for estate taxes.[3]

The statute applicable here is the general provision, Section 2033 of the Internal Revenue Code of 1954. This provides that "the gross estate shall include the value of all property . . . to the extent of the interest therein of the decedent at the time of his death." The Regulations reiterate the truism that the tax is "an excise tax on the transfer of property at death and is not a tax on the property transferred." Treas. Reg. 20.2033-1(a). It is of course imperative that the tax be imposed on the *transfer* of the property in order to avoid the constitutional prohibition against unapportioned direct taxes. From this, it seems to us, it follows that the valuation of the estate should be made at the time of the transfer. The time of transfer is the time of death. Treas. Reg. 20.2031-1(b). In Knowlton v. Moore, 1900, 178 U.S. 41, 56, the Supreme Court said, "tax laws of this nature in all countries rest in their essence upon the principle that death is the generating source from which the particular taxing power takes its being and that it is the power to transmit, or the transmission from the dead to the living, on which such taxes are more immediately rested." See Shedd's Estate v. Commissioner, 9 Cir., 1956, 237 F.2d 345, 350, cert. denied, 352 U.S. 1024.

1 Holmes, "Law in Science and Science in Law," 12 Harv. L. Rev. 443, 461 (1899).

2 See Goodman v. Granger, 3 Cir., 1957, 243 F.2d 264, 268, cert. denied, 355 U.S. 835; Christiernin v. Manning, D.C.N.J., 1956, 138 F. Supp. 923, 926.

3 The question in Edwards v. Slocum was whether the estate could claim as a charitable deduction the full amount of the before-tax residue even though the residue (and therefore the amount received by the charity devisees) would necessarily be reduced by the payment of the estate taxes. The Court allowed the full deduction, but was later overruled by legislation. See Section 807 of the Internal Revenue Act of 1932. This deduction is a matter of legislative grace which could be varied as Congress saw fit, and should not be expected to dovetail with tests for valuation of property in the estate.

Brief as is the instant of death, the court must pinpoint its valuation at this instant — the moment of truth, when the ownership of the decedent ends and the ownership of the successors begins. It is a fallacy, therefore, to argue value before — or — after death on the notion that valuation must be determined by the value either of the interest that ceases or of the interest that begins. Instead, the valuation is determined by *the interest that passes,* and the value of the interest before or after death is pertinent only as it serves to indicate the value *at* death. In the usual case death brings no change in the value of property. It is only in the few cases where death alters value, as well as ownership, that it is necessary to determine whether the value at the time of death reflects the change caused by death, for example, loss of services of a valuable partner to a small business.

An examination of several instances where the value of a decedent's property differs after death from its value during his life indicates that whether the subsequent value is increased or reduced, the valuation at death uniformly gives full effect to the change that accompanies the death. In Goodman v. Granger, 3 Cir., 1957, 243 F.2d 264, cert. denied, 355 U.S. 835, the court was called on to evaluate three employment contracts carrying contingent benefits of $2000 annually for fifteen years after termination of the employee's employment, provided that the employee did not engage in any competing business for a certain period of time and provided that his post-employment earnings from other work did not exceed a specified amount. The trial court held that the value of the contracts must be limited to the interest of the decedent during his life and that his interest could not be valued because of the contingencies. On appeal the Third Circuit reversed. It ruled that since the possibility of forfeiture was extinguished by the decedent's death the contract rights should be given their full value for estate tax purposes. In May v. McGowan, 2 Cir., 1952, 194 F.2d 396 a father and son had organized a corporation which assumed a large debt owed by the father. Each agreed that he would not sell his stock without first offering it to the other at a specified price, and if the son should buy his father's stock the price was to be reduced by the amount of any portion of the debt still outstanding. At the death of either the other would become entitled as of right to purchase the stock at the same specified price. The father died while the debt still exceeded the price the son was to pay for his father's stock, and the question arose as to the valuation of the father's stock for estate taxes. Although the stock presumably must have had some value during the father's life, because of his right to hold it so long as he lived and to receive any dividends paid, the Court found that the stock was valueless for estate tax purposes since the son could acquire it under the agreement for nothing once his father died. Similarly, when the value of an interest in a corporation or partnership depends in part on the decedent's ability, activity, or goodwill, the value for estate taxes will be reduced to reflect the loss of the decedent. Newell v. Commissioner, 7 Cir., 1933, 66 F.2d 102; see Estate of Maddock, 1951, 16 T.C. 324. The same rule applies in the case of life insurance contracts. During the life of the insured the value of a policy is its cash surrender value. After death the beneficiary holds a ripened claim for the face value. See Commissioner v. Chase Manhattan Bank, 5 Cir., 1958, 259 F.2d 231, cert. denied, 359 U.S. 913. Section 2042 expressly provides that the latter valuation shall be used in determining estates taxes.[4]

[4] The valuation of annuities further illustrates the practice of referring to its future value. In Mearkle's Estate v. Commissioner, 3 Cir., 1942, 129 F.2d 386 the decedent owned an annuity payable to himself during his life, then to his wife for her life. The court valued the contract at the purchase price of an equivalent annuity contract for the life of the wife based on her life expectancy at the decedent's death, without reference to his life expectancy or their joint life expectancy. See also Christiernin v. Manning, D.C.N.J., 1956, 138 F. Supp. 923.

Underlying the determination in these instances that the valuation of property passing at death reflects the changes wrought by death is a basic economic fact: value looks ahead. To find the fair market value of a property interest at the decedent's death we put ourselves in the position of a potential purchaser of the interest at that time. Such a person would not be influenced in his calculations by past risks that had failed to materialize or by restrictions that had ended. Death tolls the bell for risks, contingencies, or restrictions which exist only during the life of the decedent. A potential-buyer focuses on the value the property has in the present or will have in the future. He attributes full value to any right that vests or matures at death, and he reduces his valuation to account for any risk or deprivation that death brings into effect, such as the effect of the death on the brains of a small, close corporation. These are factors that would affect his enjoyment of the property should he purchase it, and on which he bases his valuation. The sense of the situation suggests that we follow suit.

It might be argued that the Regulations abandon this approach and look to the past rather than the future in certain cases. Section 20.2031-2(h) provides that when stock is held subject to an option that is to take effect at death but leaves the decedent free to dispose of the property during his life, the option or contract price will not control the evaluation for estate tax purposes. See Estate of Giannini, 1942, 2 T.C. 1160, 1176-80, aff'd without discussion of this point, 9 Cir., 1945, 148 F.2d 285, cert. denied, 326 U.S. 730. This rule is based, however, on an entirely different foundation: when a decedent retains complete freedom to prevent the property being subjected to a restriction or contingency his inaction constitutes a passive transfer of an interest in the property to the person who stands to benefit by the limitation on the value of the property passing to the decedent's heir or legatee.[5] The rule applies the same principle that underlies Section 2038 and 2041, which include within a decedent's estate property over which he held a power of disposition or appointment.[6] Under this analysis such a case does not present a problem of changing value; the interest simply is split and passes to different persons, but its total value is unaltered, and that is the value included in the estate.

The cases relied on by the appellees are not in point. They involve restrictions which not only were in effect during the decedent's life but were effective and enforcible on his death; Wilson v. Bowers, 2 Cir., 1932, 57 F.2d 682; Lomb v.

---

5 In Goodman v. Granger, 3 Cir., 1957, 243 F.2d 264, 269, cert. denied, 355 U.S. 835, the Court stated: "True, the right to these payments was forfeitable upon the occurrence of any of the specified contingencies. However, forfeiture as a result of the contingencies never occurred during Blum's lifetime, and any possibility of their occurrence was extinguished by his death. Gimbels has been making and the estate has been collecting the payments provided by the contracts. Valuation of the right to these payments must be determined as of the time of Blum's death when the limiting factor of the contingencies would no longer be considered. Death ripened the interest in the deferred payments into an absolute one, and death permitted the imposition of the tax measured by the value of that absolute interest in property."

6 In Chase National Bank of City of New York v. United States, 1929, 278 U.S. 327, 335, the Supreme Court held the estate tax could properly be imposed on the transfer of the decedent's life insurance at his death, although the interest of the beneficiaries had vested before his death and the proceeds were paid to them by the insurance company rather than by the decedent. The Court stated: "A power in the decedent to surrender and cancel the policies, to pledge them as security for loans and the power to dispose of them and their proceeds for his own benefit during his life which subjects them to the control of a bankruptcy court for the benefit of his creditors . . . and which may, under local law applicable to the parties here, subject them in part to the payment of his debts . . . is by no means the least substantial of the legal incidents of ownership, and its termination at his death so as to free the beneficiaries of the policy from the possibility of its exercise would seem to be no less a transfer within the reach of the taxing power than a transfer effected in other ways through death." See also Saltonstall v. Saltonstall, 1929, 276 U.S. 260.

Sugden, 2 Cir., 1936, 82 F.2d 166. See Mertens' Law of Federal Gift and Estate Taxation §9.08. Thus, in Wilson v. Bowers the Court emphasized the fact that there was a specifically enforcible contract giving the shareholders the right to purchase stock at a specified price upon the owner's intended disposal of the stock *or upon his death*. In Lomb v. Sugden the same court held a restriction conclusive of value where there was an enforcible agreement giving the decedent the power of disposal within a group. Other cases have distinguished between an enforcible option immediately exercisable at the will of the buyer, as in Wilson v. Bowers, and a mere right of first refusal. Worchester County Trust Co. v. Commissioner, 1 Cir., 1943, 134 F.2d 578; Michigan Trust Co. v. Commissioner, 27 B.T.A. 556 (1933). Both in Wilson v. Bowers and in Lomb v. Sugden it was decisive that the maximum price realizable by the estate was the option price, because the optionees having the right to buy could and probably would buy at the reduced value — before or after death of the decedent. Not so here. Here the option to sell at the reduced price had expired, and there is no reason to assume that the executors would sell below the fair market value.

Even if the partnership interest should, as the appellees contend, be valued at the moment before the decedent's death, it would be improper to limit the valuation to two-thirds its value. Although the Supreme Court in Helvering v. Salvage, 1936, 297 U.S. 106, declared that an option held by a stranger limits the value of the property to its owner to the option price, that decision should not be extended to cases where the restriction is only an obligation to offer the property to the third person at a pre-arranged price *if* the owner should decide to sell. The reasoning behind the decision in Helvering v. Salvage is that if the value of the property rises above the option price the optionee will certainly exercise his option. But in the instant case the decedent had no such fear that they would lose their partnership interest as soon as it reached a certain value; the agreement reserved to each partner the right to hold his interest indefinitely, and the restriction on its sale price would become effective only if the partner chose to sell during his lifetime. Although the restriction would reduce the value of the interest somewhat, immediately saleability is certainly not the only attribute of value. The decedent's right to hold the interest and receive income from it, with the assurance that eventually the interest would be redeemable at full value, would raise its current value well above the restricted price applicable during his life. While it would not be possible to determine the proper valuation exactly, an approximate estimate would be more acceptable than the arbitrary application of the two-thirds price.

When John Robert Land and his father died, the possibility that either would withdraw from the partnership and surrender his interest at the two-thirds valuation was foreclosed. There was then no contract or option outstanding except in the partners to purchase at full value. Death sealed the fact that their interests would be purchased or redeemed at full value. The fair market value, therefore, of the partnership interest at the time of the death of the partner was its full value. That valuation is controlling for estate tax purposes.

The judgment is reversed.

NOTE

1. *I.R.S. position on restrictive agreements.* The current view of the Internal Revenue Service on the effect, for estate and gift tax purposes, of a restrictive agreement among shareholders is expressed in Rev. Rul. 59-60, 1959-1 C.B. 237 as follows:

> Frequently, in the valuation of closely held stock for estate and gift tax purposes, it will be found that the stock is subject to an agreement restricting its sale or transfer.

> Where shares of stock were acquired by a decedent subject to an option reserved by the issuing corporation to repurchase at a certain price, the option price is usually accepted as the fair market value for estate tax purposes. See Rev. Rul. 54-76, C.B. 1954-1, 194 [option price controlling where embodied in corporate charter]. However, in such case the option price is not determinative of fair market value for gift tax purposes. Where the option, or buy and sell agreement, is the result of voluntary action by the stockholders and is binding during the life as well as at the death of the stockholders, such agreement may or may not, depending upon the circumstances of each case, fix the value for estate tax purposes. However, such agreement is a factor to be considered, with other relevant factors, in determining fair market value. Where the stockholder is free to dispose of his shares during life and the option is to become effective only upon his death, the fair market value is not limited to the option price. It is always necessary to consider the relationship of the parties, the relative number of shares held by the decedent, and other material facts, to determine whether the agreement represents a bonafide business arrangment or is a device to pass the decedent's shares to the natural objects of his bounty for less than an adequate and full consideration in money or money's worth. In this connection see Rev. Rul. 157, 1953-2 C.B. 255 [option effective only on death not controlling], and Rev. Rul. 189, 1953-2 C.B. 294 [where corporation had right of first refusal at a fixed price or at a price to be determined by formula, price is not controlling because shareholder was not required to sell, but restriction is a factor to be considered in determining fair market value].

See also Regs. §20.2031-2(h):

> Another person may hold an option or a contract to purchase securities owned by a decedent at the time of his death. The effect, if any, that is given to the option or contract price in determining the value of the securities for estate tax purposes depends upon the circumstances of the particular case. Little weight will be accorded a price contained in an option or contract under which the decedent is free to dispose of the underlying securities at any price he chooses during his lifetime. Such is the effect, for example, of an agreement on the part of a shareholder to purchase whatever shares of stock the decedent may own at the time of his death. Even if the decedent is not free to dispose of the underlying securities at other than the option or contract price, such price will be disregarded in determining the value of the securities unless it is determined under the circumstances of the particular case that the agreement represents a bona fide business arrangement and not a device to pass the decedent's shares to the natural objects of his bounty for less than an adequate and full consideration in money or money's worth.

With these statements, see Regs. §20.2031-3, stating:

> Special attention should be given to determine an adequate value of the good will of the business in all cases in which the decedent has not agreed, for adequate and full consideration in money or money's worth, that his interest passes at his death to, for example, his surviving partner or partners.

Does this imply that if two partners or shareholders agree that the first to die will forfeit his business interest on death in favor of the other, nothing will be included in the gross estate?

Note the explanation given in the *Land* case for Giannini's Estate v. Commissioner, where the decedent was free to dispose of the shares during his lifetime at their full fair market value. If the difference between the fair market value at death and the option price was the subject of a "transfer" by the decedent to the optionee, did the transfer occur when the agreement was executed, or at death? Should the putative transfer be regarded as made for full and adequate consideration in money or money's worth? The court in *Giannini's Estate* expressed the view that the option "was intended to take effect in possession and enjoyment at or after the optionor's death and therefore the fair market value of the property is includible in [the] gross estate under the rationale of Helvering

v. Hallock [supra p. 1181]." To the extent that this theory rests on the postponed-possession-or-enjoyment clause (supra p. 1177), is it valid under today's statute?

For cases citing and following *Giannini's Estate,* see Trammell's Estate v. Commissioner, 18 T.C. 662 (1952); Mathews' Estate v. Commissioner, 3 T.C. 525 (1944).

If the executor elects to employ the optional valuation date of §2032, and the shares have been purchased under the option before then, does the option price become controlling?

How should a restrictive agreement affect the value of stock for gift tax purposes? Assume that the agreement provides that a shareholder may transfer his stock by gift or otherwise only after offering it to the corporation at book value, and that this restriction is equally binding on the transferee. If the corporation allows the shareholder to make a gift of the stock to his son (by declining to exercise its option), does it follow that the value of the gift is no more than book value? See Spitzer v. Commissioner, 153 F.2d 967 (8th Cir. 1946).

2. *Intra-family agreements.* Note the reservation in both Regs. 20.2031-2(h) and Rev. Rul. 59-60, supra, with respect to an agreement that is "a device to pass the decedent's shares to the natural objects of his bounty for less than an adequate and full consideration in money or money's worth." Despite this warning, restrictive agreements that are otherwise airtight have ordinarily withstood attacks based on the "testamentary substitute" theory, at least if the children or other optionees were active in the business before the decedent's death. See Littick's Estate v. Commissioner, 31 T.C. 181 (1958); Davis v. United States, 5 A.F.T.R.2d 1902 (D. Utah, 1960); Commissioner v. Bensel, 100 F.2d 639 (3d Cir. 1938); May v. McGowan, 194 F.2d 396 (2d Cir. 1952).

Even if the agreement is intended as "a device" to transfer the decedent's shares to his beneficiaries for less than their fair market value, should it be given effect on the ground that the difference between the option price and the unrestricted value of the stock was transferred by an inter vivos gift from the stockholder to the option holder? Could there be a gift tax on the execution of an agreement by which a father gave his son the right to purchase his shares for a stated price on his death if the son survives him? Would a failure to exercise a favorable option constitute a taxable gift?

In Matter of Galewitz, 3 A.D.2d 280 (N.Y. 1957), the court held that part of the federal estate tax was to be apportioned against the decedent's son, who purchased his stock under a shareholders' agreement for $600,000, because it was valued at $1.3 million in the federal tax proceeding. The court held that although purchasers are not ordinarily "persons interested in the estate" within the meaning of §124 of the New York Decedent Estate Law (requiring apportionment of the estate tax, infra page 1360), the optionee under such an agreement is subject to the statute because "while the option is valid in contract law, its status tax-wise is not that of a bona fide sale contract, but of a transfer, part-sale, and part-gift."

CHAPTER 17

Payment, Collection, and Apportionment

Section A. The Estate Tax

1. *Payment and Collection*

COLLIE, TAX RESPONSIBILITIES OF EXECUTOR

Proceedings of Probate and Trust Law Divisions, A.B.A. Section of Real Property, Probate and Trust Law (Sept. 17-19, 1951) 24-28

I. Estate Notices

The first document which an executor should prepare and file is believed to be unnoticed generally in many parts of the country, even by experienced executors. This is the notice of the assumption of the office of the executor and when properly served upon the Commissioner of Internal Revenue places the executor in the fiduciary relationship insofar as the Commissioner is concerned and continues him in that position until he is properly discharged. . . .

It is generally held that failure to give the notice of appointment in the prescribed form does not relieve the executor of his responsibility to the Federal Government, irrespective of a discharge by the Probate Court. Ordinarily the possibility of a penalty for failure to file such notice would seem to be remote. However it is important to remember that before an assessment is valid, the Commissioner must issue a properly addressed deficiency notice to the taxpayer. The deficiency notice to a decedent is properly addressed if sent to his last known address [§6212(b)] unless the executor has given a notice of fiduciary relationship. It is quite possible to envision circumstances of surcharge if a deficiency notice is not duly received by the executor due to his failure to give the proper notice. . . .

Thereafter the executor is required [§6036; Regs. §20.6036-1] to file a preliminary notice within two months after the deceased's death or two months after the date the executor qualified as such, whichever of such dates is later. This notice must be filed if the *gross* estate exceeds $60,000 at the date of death. This value is determined under the Federal estate tax statute and has no relevance to the probate estate. Therefore the executor has the duty of examining the affairs of the deceased to ascertain whether or not there are any assets such as life insurance or gifts in contemplation of death, which might raise the gross taxable estate to more than $60,000. This notice must be filed regardless of the deductions of the estate or any contention with respect to the exclusion of such property from the estate. The regulations [§20.6036-1] provide that such notice should be prepared and filed if an examination indicates any doubt of the $60,000 requirement being met and that the filing of such notice is mandatory. . . .

The prescribed Form 704 indicates that an approximation must be given with respect to the various types of property in the estate, but it is understood in many cases that this requirement is ignored and a lump sum is inserted.

It is obvious that ad valorem penalties cannot be asserted on the failure to file this notice because there is no tax by which the penalty could be measured. However, [§7269] apparently imposes a mandatory penalty of not exceeding $500 on the person failing to comply with the filing of such returns, together with the cost of the suit to be recovered in a civil action in the name of the United States. Nevertheless it appears to be the general practice that such penalties are not asserted except in a case of a refusal to file such notice after demand. Such penalty necessarily would be imposed directly upon the executor and would not be a charge against the estate. . . .

II. Federal Estate Tax Return

The Federal Estate Tax Return (Form 706) must be filed in duplicate within fifteen months from the date of death. [For extensions of time, see Regs. §20.-6081-1.] Aside from the usual penalties for failing to file an estate tax return on time, the regulations specifically provide that the failure to file the timely return loses to the estate the privilege of using the [alternate] valuation date. [Regs. §20.2032-1(b)(2).]

In preparing the estate tax return one of the most important problems is choosing the appropriate valuation date and sustaining the valuation that is most advantageous to the estate. . . . It is the opinion of many that the failure to select the proper date is justification for surcharging an executor with the loss unless it can be shown that the executor acted with due diligence.

The selection of the [alternate] valuation date has income tax consequences to the estate. On one hand if the value a year after the date of death is selected there may be no income tax but if the value at the date of death is selected, a sale might result in a loss which is an allowable deduction. Of course in many instances this is an impractical hope in that the Revenue Agent will use hindsight and contend that the value at the date of disposition was the value at the date of death. In valuing property, consideration must be given to the immediate possibilities of sale, e.g., the difference in tax rates between the estate tax rate and the income tax rate, especially if any profit on the sale will be taxed as ordinary income. Another frequent problem is the valuation of notes — the balancing of the probability of payment against receiving some ordinary income if payment is received.

An additional difficult problem is raised by the requirement that certain lifetime gifts be declared in the return even though the executor contends that such transfers are not includible in the taxable estate.* . . . In many instances it is believed this requirement is virtually ignored until examination of the return and it is the belief of many that only experienced preparation protects an estate from "overdisclosure" in the preparation of the return. A question to be resolved is the ever present conflict between the executor's duty to the estate and his duty to the Federal Government.

III. Payment of Estate Tax

A frequently misunderstood point is that an extension of time for filing the estate tax return is entirely distinct from an extension of time for the payment of tax. The tax must be paid at the end of fifteen months after the date of death

* Regulations §20.2018-3(c)(7) requires the executor to report (a) all transfers of $1000 or more within the 3-year period preceding death, and (b) all transfers in trust of $5000 or more regardless of date, whether the transfers are regarded as taxable or not. Bona fide sales for full consideration are excepted. — Ed.

unless . . . an extension of time [is granted] on a showing that the payment at the regular time would work an undue hardship upon the estate. [§6161(a)(2).] An illustration of this hardship is the disposition of property at a sacrifice in order to raise the money for the payment of the tax. . . .

The statute provides for an extension of time for payment of any estate tax on a reversionary or remainder interest, belonging to the decedent, for six months after the time such interest vests in possession. However, a bond of double the amount of tax attributable to such interest plus interest at 4 per cent for the estimated duration of the extended period, commencing 18 months after the date of death must be filed. The Commissioner must be advised annually in September of the status of the matter. [§6163(a); Regs. §20.6165-1.]

IV. Preparing and Filing Income Tax Returns

Generally two or more income tax returns are required to be prepared and filed by the executor.

A. Income to Date of Death

The first one is the last return of the deceased, covering the period between the end of the last taxable period of the decedent and the date of death [§6012-(b)(1)].

A further income tax problem is raised by [§6013(a)(3)] which provides for a joint return by the surviving spouse and the executor. Such joint return in most cases will reduce the combined income taxes of the estate and the spouse. However, there is the question of the executor's ascertaining whether the income of the spouse is being correctly reported and whether there might be subsequent developments that would render the joint return injurious to the estate. The Report of the Probate Courts Committee of this Section [Section of Real Property, Probate and Trust Law, A.B.A.] for 1949 suggested the possibility of personal liability to the executor under such circumstances and advises use of an indemnity agreement (a form is provided) and the necessity of collateral. The agreement further provides for the apportionment of refunds, deficiencies and cooperation on procedural steps. Certainly there is substantial peril to the executor if the joint return is for the sole benefit of the surviving spouse.*

In a similar field the executor must consider his assent to a return previously filed. Even though a joint return is filed by a surviving spouse, an executor later appointed may disaffirm within one year after the last day prescribed by law for filing the return of the surviving spouse. The separate return thereafter made by the executor will constitute the return of the deceased spouse for the taxable year. In the absence of specific authority, (some states have special statutes) the present general practice apparently is to judge each case on its merits, e.g., if it is to the advantage of the estate or the risk is not great, the joint return procedure is followed.

B. Income During Probate

. . . An election is given with reference to the deductions described in [§642(g)] between taking such items on the income tax return of the estate or on the estate tax return.† Obviously such deduction should be taken where it will yield the most tax benefit. If such deductions are claimed on the income tax return, it is mandatory that a statement be filed therewith, waiving the right to claim

* See In re Floyd's Estate, supra page 336. — Ed.

† Supra page 1273. — Ed.

the same deduction on the estate tax return. The failure to file such statement loses the income tax deduction even though no estate tax return was required because the gross estate was less than $60,000. The election is an annual one for the expenses of the year concerned.

On the other hand deductions for expenses, interest, taxes and depletion in respect of a decedent allowable under [§691] may be taken on both the income tax return of the estate, if it is otherwise a deductible item by the estate, and as an estate tax deduction, if otherwise allowable on the estate tax return.

C. Executor's Personal Liabilities

In reporting the income of the decedent, it is becoming increasingly obvious that it is the duty of an executor to examine the prior returns of the decedent and to make some reasonable check between the assets in the estate and these returns. A correlation of the two may make it obvious on the usual "net worth" basis that the decedent had been failing to report part or all of the income from his assets. As has been pointed out by one authority:

> If a careful investigation of all the available evidence, a comparison with returns filed and the questioning of all persons in a position to shed any light on the facts leads the executor to feel reasonably sure that false returns were filed by decedent, it would appear that a clear duty exists to disclose the facts through the preparation and filing of amended returns insofar as it may be possible to prepare such returns. A failure to do so might result in a criminal charge against the executor for the concealment of a material fact in dealing with an agency of the United States. A violation of [§§7201-7203] might also be involved. [Stutsman, Tax Responsibilities of an Executor, 1950 So. Calif. Tax Inst. 551, 564.]

There is no way that the executor may terminate his responsibilities for the penalties that might be imposed with respect to false returns.

Section 3466 of the Revised Statutes creates a priority in payment in favor of debts to the United States "whenever the estate of a deceased debtor in the hands of the executors or administrators is insufficient to pay all of the debts due from the deceased." Complementary §3467 provides for the personal liability of the executor if the injunction of §3466 is violated. In the interpretation of these sections of the statutes, the estate tax regulations provide [that an executor who pays any debt or distributes any portion of the estate before the estate tax is paid in full shall be "personally liable, to the extent of the payment or distribution, for so much of the estate tax as remains due and unpaid." Regs. §20.2002-1.]

V. REQUEST FOR EARLY DETERMINATION OF TAXES

In addition to requesting an early determination with respect to income taxes [under §6501(b)], the executor under [§2204] has the right to request the determination of the Federal estate tax within one year from the filing of the return. Thereupon the executor is released from personal liability for any deficiency in estate tax found due after that date.

Many do not realize that such discharge is limited to the *personal liability* of the executor for unpaid Federal estate tax. Such request does not discharge the liability of the estate nor does it release the executor from liability for any other charges asserted under §3466 and §3467. Section [2204] has no applicability to the liability of any person as a transferee of estate assets.

VI. Duty to Obtain Reimbursement for Estate Taxes

Section [2206; supra p. 1254] provides that an executor "shall be entitled" to recoup from the beneficiary of any life insurance included in the gross estate such portion of the total estate tax payable as the proceeds of the policies bear to the sum of the net estate and the statutory exemption allowed in computing such net estate. . . . Section [2207; supra p. 1268] extends a similar authority to recoup proportionately from the object of the power of appointment over which the decedent-donee had a power of appointment. This duty to obtain reimbursement does not extend under either Section to property qualifying for the marital deduction except to the extent that the amount of insurance or property received exceeds the allowable marital deduction. Each section is subject to contrary instructions in the decedent's will.

It is obvious that the expression "shall be entitled" to recoupment is ambiguous. Since this is a matter of state law, some states settle the matter by specific provision in their statutes.* In the absence of an agreement among all parties in interest that the estate itself shall discharge the entire tax burden, in the states having no such statutes it seems that a prudent executor would file suit, if necessary, against any such person to discharge the duty of the executor to conserve the estate. Otherwise there would be grounds for objection by the beneficiaries of the estate with the possibility of surcharging the executor.

VII. Duty to File Gift Tax Return

[Regs. §25.6019-1(b); see §6903] enjoins the executor to file gift tax returns . . . for the decedent. Assuming research reveals no delinquent returns for the past, there arises a problem similar to the one discussed heretofore as to a joint income tax return with the surviving spouse.

The executor [is authorized] to consent to gifts of the surviving spouse and vice versa. [§2513.] If the executor consents, the benefit to the estate apparently is non-existent and the executor must seek adequate protection. If the decedent made the gift, an obvious duty falls on the executor to seek immediately the consent of the surviving spouse.

VIII. Distribution of Income

There is the responsibility for tax planning which may not be such a duty as to incur a surcharge upon the executor, but it is the type of responsibility that is implicit in the proper execution of fiduciary duties. It is becoming increasingly obvious that in substantial estates or where the beneficiaries of the estates already have substantial income, the executor annually ought to assemble the facts and figures that will reveal the probable net income of the estate before the end of the year, and then consult the beneficiaries of the estate so as to coordinate distributions from the estate in a manner that will minimize the income tax liabilities of all. Implicit in such undertaking will be the necessity of deciding as soon as the executor is appointed the question of how soon any testamentary trusts can be set up, the interpretation of any provisions of the will, and whether or not there are sufficient assets to avoid any personal liability to the executor making such distributions.

---

* Infra page 1360. — Ed.

The matter has been summarized by Armstrong ("Tax Planning for Distributions," 90 Trusts and Estates 378 (1951)) as follows:

> The executor will engage in a multiphase calculation having the object of estimating or determining the amount of administration expense to be paid in the first year and deduct it for income (as distinguished from estate) tax purposes; the amount of income to be distributed and taxed to heirs and legatees and the amount that will remain for taxation to the estate; the effect of the presence of a testamentary trust (if there is one), particularly a trust where the fiduciary has the discretion either to retain or to distribute income with the result of retaining or shifting the tax burden as between the trust and beneficiaries; the desirability of filing a joint return for the decedent and a surviving spouse (if there is one). The objective is, of course, to get losses and expense deductions into the year and return where they will do the most good, and to spread the income around among the estate, the testamentary trust, the surviving spouse and the heirs or legatees in such a fashion that the respective taxable incomes of all are brought as nearly as possible to a common level.

Generally speaking the exact measure of the liability of the executor for the failure to discharge the duties discussed herein has not been clarified by the courts. "But it is difficult to conceive of a court being sympathetic toward an executor, particularly one who makes such his profession, who failed to avail himself of every opportunity to minimize the tax burden of the estate and therefore of the beneficiaries who receive it." [Stutsman, Tax Responsibilities of an Executor, supra.]

NOTE

1. *Extension of time for payment.* Section 6161(a)(2) (extension of time for payment of estate tax in cases of "undue hardship") has recently been interpreted to permit an extension if property would have to be sold "at a sacrifice price or on a severely depressed market" or if an interest in a family business would have to be sold to "unrelated persons" even if it could be sold at its current fair market value. Regs. §20.6161-1(b). An extension of time under §6161(a)(2) may not exceed 10 years, is subject to payment of interest, and may be conditioned on the posting of a bond under §6165 in an amount equal to double the postponed tax. Similar conditions are applicable to an extension of time under §6163 (tax attributable to reversionary or remainder interest included in gross estate), except that the extension may run until 6 months after the interest falls in, plus an additional 3 years if prompt payment at that time would produce undue hardship.

Section 6166, enacted in 1958, permits the executor to elect to pay the estate tax attributable to an "interest in a closely held business" (as defined) in installments over a 10-year period, if the value of the interest exceeds 35 per cent of the gross estate or 50 per cent of the taxable estate. Unlike an extension under §6161(a)(2), which is discretionary with the government, an extension under §6166 is a matter of right. If the business interest is sold or if there are aggregate withdrawals of 50 per cent or more of its value, however, the extension of time is terminated and the unpaid tax becomes due and payable upon demand.

2. *Estate tax liens.* In addition to the general tax lien of §6321 (the scope of which is described by §§6322-6323), a special lien for estate taxes is created by §6324, valid for ten years against the gross estate. If property is transferred to a bona fide purchaser or mortgagee for full consideration, the lien attaches to the proceeds. Special rules are provided to protect purchasers of securities and, under a 1964 amendment, motor vehicles, and the Internal Revenue Service has authority under §6325 to release the liens (e.g., to facilitate a sale of property) if a bond is posted or if the value of the remaining property is at least double the unpaid tax.

3. *Personal liability of fiduciary.* The executor may become personally liable for an unpaid estate tax by virtue of Title 31, §192, imposing personal liability if a fiduciary pays "any debt" of the estate or trust before satisfying its obligations to the United States. The Regulations construe the term "any debt" as used in this provision to include a beneficiary's distributive share of the estate. Regs. §20.2002-1.

SCHUSTER v. COMMISSIONER

312 F.2d 311 (9th Cir. 1962)

Before STEPHENS, JERTBERG and KOELSCH, Circuit Judges.

KOELSCH, Circuit Judge.

These are actions combined in this court to review two decisions of the Tax Court sustaining the Commissioner's determination that the petitioners are liable as transferees for unpaid estate taxes, pursuant to [§6324(a)(2) and §6901(a)(1)(A)].*

Upon the death of William P. Baker in 1951, his will was duly admitted to probate in California, the state of his residence, and his widow, Melba Baker (now Schuster), was appointed executrix. On October 7, 1952, Schuster filed an estate tax return to which she attached a copy of a trust agreement, executed between the decedent and the petitioner Bank. This agreement, dated September 12, 1941, designated Baker's daughter, Patricia Baker Englert, as beneficiary, and provided that the trust was to terminate and the property to be distributed to her on June 28, 1955, when she reached 30 years of age. It also contained the provision, which Baker had not invoked, permitting him to revoke the trust during his lifetime. The executrix reported the trust for disclosure purposes only, as she did not deem the corpus to be part of the decedent's estate. The then Commissioner, T. Coleman Andrews, concurred with the executrix but determined certain deficiencies in estate tax, which she paid out of the estate.

Shortly before the trust terminated, the beneficiary's husband advised the Bank that all gift taxes applicable to the trust and all estate taxes had been paid. Thereupon, the Bank distributed all the trust property and closed its file.

Andrews was succeeded as Commissioner by Russell C. Harrington. He decided the trust corpus constituted an asset of the decedent's estate for tax purposes, and that a deficiency accordingly existed. But although the estate was not finally distributed, and had assets in excess of the claimed deficiency, proceedings against it for collection was barred by the three-year statute of limitations provided by [§6501(a)].

However, [§6324(a)(2)] provides that if an estate tax is not paid when due, then the "spouse, transferee, trustee, surviving tenant . . . or beneficiary," among others, who receives or has on the date of decedent's death property "included in the gross estate" is "personally liable" for its payment. And [§6901] provides that the Commissioner might proceed against a "transferee" to collect the tax in the same way he might proceed against the estate. The section also allows a pro-

* Section 6324(a)(2) provides: "If the estate tax . . . is not paid when due, then the spouse, transferee, trustee . . . , surviving tenant, person in possession of the property by reason of the exercise, nonexercise, or release of a power of appointment, or beneficiary, who receives, or has on the date of the decedent's death, property included in the gross estate under sections 2034 to 2042, inclusive, to the extent of the value, at the time of the decedent's death, of such property, shall be personally liable for such tax." Section 6901(a)(1)(A) provides that the liability "at law or in equity, of a transferee of property . . . of a decedent" shall be assessed, paid, and collected in the same manner and subject to the same limitations as the tax itself, except that under §6901(c)(1) the statute of limitations does not expire until 1 year after expiration of the time applicable to the transferor. — ED.

posed assessment against a "transferee . . . within one year after the expiration of the period of limitation for assessment against the executor," or four years after the filing of the return. Finally, the section defines "transferee" as "a person who, under [§6324(a)(2)], is personally liable for any part of the tax."

Acting pursuant to these sections, the Commissioner, on September 6, 1956, mailed deficiency notices to the Bank, as trustee, to Schuster, as surviving tenant, and to Englert, as transferee. Each of them thereupon petitioned the Tax Court to review the Commissioner's determinations.

The Tax Court held that Englert was not liable,[1] but it sustained the Commissioner's determinations of deficiency against Schuster and the Bank, and they have brought the matters here. The Commissioner has not sought a review of the adverse decision in the case against Englert, but he has filed cross-petitions assigning as error the Tax Court's failure to include interest on the deficiencies found due from Schuster and the Bank. The Bank concedes that the trust corpus was properly includable in the gross estate, as required by [§6324(a)(2)], and Schuster makes the same concession regarding the property held by her in joint tenancy with decedent during his lifetime. They also concede that the Commissioner sent the deficiency notices within four years after the filing of the estate tax return, as required by [§6901(c)(1)]. But they raise several issues of law in an effort to secure reversals of the Tax Court's decision. Petitioners' contentions will be considered seriatim.

It is petitioners' position that their substantive liability for the estate tax deficiency depends on state law, and that they are not liable under the law of the appropriate state, California. Their basic premise is that there is no federal law which establishes their substantive liability. They assert that [§6901], under which the Commissioner is permitted to assess and collect deficiencies from transferees, does not establish the transferee's liability, but is merely a procedural statute which enables the Commissioner to proceed against the transferee as he might against the estate. . . . The petitioners point out that a provision similar to [§6901(a)(1)] governs the Commissioner's right to enforce the liability of transferees for the transferor's deficiency in *income* taxes.* In Commissioner v. Stern [supra p. 929], the Supreme Court held that this provision does not impose substantive liability on transferees, but merely refers this question to the law of the appropriate state. . . . The petitioners argue that the rule of the *Stern* decision should be applied in determining a transferee's liability for a deficiency in estate taxes, and thus that their liability depends on the application of state law. In California, the general rule is that a transferee's liability for the debts of the transferor is secondary, not primary. That is, his liability is conditioned on the creditor's remedies against the transferor, and may not be enforced if the transferor has been relieved from his obligation (Lord v. Morris, 18 Cal. 482 (1861)), or if the transferor is able to pay his obligation (Sherman v. S.K.D. Oil Co., 185 Cal. 534, 197 P. 799 (1921)). The Commissioner has conceded that the estate is relieved from liability because of the expiration of the limitations period, and that the estate is sufficiently solvent to pay the deficiency.

We disagree with the petitioners' major premise that there is no federal law

---

[1] The Court held that the term "transferee", as used in [§6324(a)(2)], refers only to transferees of transfers made in contemplation of, or taking effect at, the decedent's death. The Court held that the term "beneficiary", as used in the section, refers only to beneficiaries of life insurance proceeds includable in the decedent's gross estate. Since Mrs. Englert was not embraced within the definition of either term, the Court held that she was not liable for the tax. ([Englert v. Commissioner], 32 T.C. 1008 (1959)).

* The transferee liability provisions of the 1939 Code (which was applicable to the taxable year before the court) were consolidated in the 1954 Code, where they appear as subparagraphs (i) and (ii) of §6901(a)(1)(A). — Ed.

which establishes their substantive liability. It is true, as the petitioners argue, that [§6901] is merely a procedural statute which authorizes the enforcement of a liability which is created elsewhere. But it does not follow that this liability is created by the authority of state rather than federal law. To the contrary, [§6324(a)(2)] makes transferees "personally liable" for an estate tax deficiency due from an estate. This statute has consistently been regarded as the source of such a transferee's substantive liability, and the courts have developed a uniform body of federal law defining the nature and effects of this liability. See Sharpe v. Commissioner, 107 F.2d 13 (3d Cir. 1939); cf. Mississippi Valley Trust Co. v. Commissioner, 147 F.2d 186, 187 (8th Cir. 1945); Baur v. Commissioner, 145 F.2d 338 (3d Cir. 1944); Fletcher Trust Co. v. Commissioner, 141 F.2d 36 (7th Cir.), cert. denied 323 U.S. 711 (1944); LaFortune v. Commissioner, 263 F.2d 186, 187 (10th Cir. 1958); Moore v. Commissioner, 146 F.2d 824 (2d Cir. 1945); Equitable Trust Co. v. Commissioner, 13 T.C. 731 (1949).[2] The line of authority which arrives at a different result respecting the transferee's liability for *income* tax deficiencies is inapposite, for there is no statute similar to [§6324(a)(2)] which makes transferees personally liable for the transferor's deficiency in income taxes. As the Court noted in the *Stern* decision, this was the reason that it was compelled to resort to state law to determine the transferee's liability. . . . Thus, the source of a transferee's substantive liability for a deficiency depends on the nature of the deficiency itself. It is true that this concept results in a disparity in the federal law regarding a transferee's liability for income and estate tax deficiencies, but the disparity was established by the authority of Congress, and we are bound to honor and apply it faithfully.

We conclude that the transferee's liability for estate tax deficiencies, under federal law, is essentially a primary, not a secondary, obligation. Section [6324(a)(2)] specifically imposes some limitations on the liability of such a transferee, for it requires that a deficiency be due from the estate, and that his liability therefor is limited to the value of the estate corpus which he received. But no other limitations were imposed, and there is nothing to suggest that others were intended. Therefore, it seems axiomatic that the transferee's liability for an estate tax deficiency is not conditioned on the Commissioner's remedies against the estate, except as the statute provides otherwise, and is in the nature of a direct and primary obligation independent of the obligation of the estate. As the court declared in the *Mississippi Valley Trust* case, in connection with a comparable statute relating to gift tax deficiencies,

> If the donor fails to pay the automatically imposed tax when due, in accordance with the statute, no matter what the reason for his failure, there is an immediate and direct liability on the donee for the legally-owed tax, to the extent of the value of the gift. [147 F.2d 186 at 187-188].

Indeed, the petitioners' argument that their liability is conditioned on the estate's insolvency is difficult to reconcile with the purpose of [§2205], which gives the transferee the right of reimbursement against the undistributed portions of the estate. This right presupposes a solvent estate at the time the transferee seeks reimbursement, and this condition would presumably be the same as when the deficiency was originally assessed against him. See Equitable Trust Co. v. Commissioner, supra. We conclude that the petitioners are not absolved from liability

[2] With the exception of the *Sharpe* case, all cited cases involve liability arising from the gift tax owing by the transferor. The transferee's liability for a gift tax is essentially the same as his liability for an estate tax, and thus the cases are persuasive authority for the problems raised in this litigation.

because of the Commissioner's failure to take timely action against the estate, or the estate's solvency. . . .

The petitioners contend that their liability is limited to the "property of the decedent" which is in their possession, as that phrase is used in [§6901(a)(1)(A)]. Both petitioners contend that the property which gives rise to their liability did not belong to the decedent at his death. The Bank points out that the decedent transferred the trust corpus to the Bank prior to his death. Schuster asserts that in California, the interest of the surviving tenant in joint tenancy property is derived from the original grant, not from the deceased tenant.

We see little merit to the petitioners' argument. It proceeds from the premise that [§6901] defines the nature of their liability under federal law and, as we have previously indicated, this premise is clearly wrong. The petitioners' liability is based on [§6324(a)(2)], which was amended after the enactment of [§6901] to make transferees liable for property "included in the gross estate" of the decedent. The petitioners have conceded that their property was includable in the decedent's gross estate. Significantly, the amendment specifically included "surviving tenants" and "trustees" within the group upon whom liability is imposed. Congress obviously meant to establish a uniform system of liability for such persons, rather than vary their liability in accordance with the anomalies of state law. Accordingly, we conclude that the petitioners' tax liability is not conditioned on the decedent's proprietary interest in the property under state law.

Schuster urges that she is not liable for the estate tax because the joint tenancy property is deductible as an interest passing to the decedent's surviving spouse, and therefore not includable in the net estate. But as we have already indicated, [§6324(a)(2)] makes the transferee taxable on any property which is included in the decedent's "gross estate." There is no indication that Congress intended to limit her liability to property which is part of the decedent's net estate. Schuster argues that because of the deductibility of the property, it should not be considered as part of the *substantive* gross estate. Aside from the fact that this construction ignores the plain language of the statute, it overlooks the fact that Congress specifically included the "spouse" as among the transferees who were subject to liability; it is true that the enactment of this section preceded the enactment of the marital deduction statue in 1948, but the section was re-enacted in substantially identical form as part of the Internal Revenue Code of 1954. It appears that Congress chose to prefer the Commissioner over the surviving spouse when the estate tax was unpaid, a value judgment which we are not at liberty to question. We conclude that the deductibility of the property from the estate does not protect the surviving spouse from the Commissioner's claim.

The petitioners contend that the Commissioner is estopped from asserting liability because of his earlier determination that they were not liable for the tax deficiency.

[General discussion of estoppel omitted.]

We are unaware of any particular detriment sustained by Schuster in reliance on the Commissioner's mistake, for she did not materially change her position in reliance on his earlier determination. But the Bank has been greatly prejudiced because of the Commissioner's mistake. After it was informed that the trust corpus was not includable in the decedent's gross estate, it distributed the corpus to the beneficiary, and thus no longer retains the property which was the subject of the deficiency. Therefore, any liability of the Bank would have to come out of its own pocket, not the corpus of the trust. This would be grossly unfair to the Bank, especially because it never enjoyed the use of the corpus but merely acted in the capacity of a trustee. It is difficult to see what additional action the Bank

might have taken to protect itself from liability, faced with the beneficiary's demand for the corpus and the Commissioner's determination that it was not taxable. It is our conclusion that the Bank's equitable interest is so compelling, and the loss which it would sustain so unwarrantable, as to justify the application of the estoppel doctrine against the Commissioner.

[The court rejected the argument that §§6324(a)(2) and 6901 deprived the petitioners of due process of law, holding that it is not unreasonably harsh to impose liability on a transferee for unpaid estate tax up to the value of estate property in his possession or to extend the statute of limitations as to transferees.]

NOTE

Discharge of executor under §2204. Note that §2204 provides a procedure by which the executor can protect itself against personal liability for an estate tax deficiency. The bank in the *Schuster* case could not proceed under this provision, however, because it was the trustee of an inter vivos trust, not the executor of the estate.

2. *Apportionment of the Estate Tax*

Although Congress could presumably establish a comprehensive system for apportioning the burden of the federal estate tax among some or all of the persons sharing in the gross estate, it has not done so. Consequently, the federal estate tax must ordinarily be paid out of the residuary estate, like administrative expenses, debts, and other charges. See In re Hamlin, 226 N.Y. 407, 124 N.E. 4 (1919), cert. denied, 250 U.S. 672. If the residue is insufficient, specific legacies and other interests will be abated in the same manner as when debts exceed the residue. Contrariwise, inheritance taxes, which are levied on the recipients of the estate, usually come out of the recipients' shares; thus, residuary legatees are burdened only with the inheritance tax pertinent to their own shares.

It has always been possible for the testator to nullify this normal method of charging the estate tax against the residue by providing in his will that it shall be apportioned among all, or some, of the legatees, but such an apportionment clause is often omitted from the will, even when it is reasonably clear that the decedent would not have wanted the residuary legatees to bear the entire burden. This fact led the New York State Commission to Investigate Defects in the Laws of Estate in 1930 to recommend the enactment of a state statute to apportion the burden of the tax:

> The great complaint against the estate tax has been that this burden falls upon the residuary legatees, who are, under most wills, the widow, children, or nearer or more dependent relatives. Cases have arisen where the residue has been greatly depleted by the imposition of the Federal Estate tax. Moreover, the residuary legatee under the present system is compelled not only to pay the tax assessed against the transfers passing by operation of the will, but is also compelled to pay the tax on other transfers to persons not participating in the decedent's estate. Thus, if a gift in contemplation of death has been made, or a transfer under an inter vivos trust becomes effective by reason of the death of the settlor, the tax on all such transfers is imposed upon the residuary legatees. This new law provides for an equitable apportionment of all these transfers by the surrogate in an accounting or other appropriate proceeding on notice to all the parties. Thus the donee of a gift taking effect at death will be compelled to bear his fair share of the tax upon the amount of the property which he derived and which was included in the general estate subjected to taxation. It is believed that this plan will present a fair, just and equitable method of the allocation of the estate tax, both Federal and State [Legis. Doc. No. 69, pp. 197-198 (1930).]

The hardship is accentuated when there is an unexpected fall in the value of the estate's assets, or where the taxable estate is swollen by the inclusion of inter vivos gifts, insurance proceeds, and property subject to powers of appointment. Apportionment of the federal estate tax against the latter two classes of taxable property is required by §2206 (proceeds of life insurance) and §2207 (appointive property). These federal provisions cover only a small portion of the problem, however, and their very existence suggested (until the case that follows was decided) that a comprehensive state plan of appointment might be invalid on the ground that the federal government had pre-empted the field.

RIGGS v. DEL DRAGO

317 U.S. 95 (1942)

MR. JUSTICE MURPHY, delivered the opinion of the Court.

The question for decision is whether §124 of the New York Decedent Estate Law, which provides in effect that, except as otherwise directed by the decedent's will, the burden of any federal death taxes paid by the executor or administrator shall be spread proportionately among the distributees or beneficiaries of the estate, is unconstitutional because in conflict with the federal estate tax law.

Testatrix, a resident of New York, died on October 8, 1937, leaving a will dated March 27, 1934, which, after certain gifts of personal effects and small sums of cash, bequeathed $300,000 outright to respondent Giovanni del Drago and created a trust of $200,000 for the benefit of respondent Marcel del Drago during his life, with remainder over upon his death. The residue of testatrix's estate was left in trust for the benefit of Giovanni during his life, with remainder over upon his death. The will contained no reference to the payment of estate or inheritance taxes.

The executors paid approximately $230,000 on account of the federal estate tax and then asked the Surrogate, in a petition for the settlement of their account, to determine whether that payment should be equitably apportioned among all the persons beneficially interested in the estate pursuant to §124 of the Decedent Estate Law. Giovanni and Marcel del Drago answered, raising objections to the constitutionality of §124. Petitioner, who was appointed special guardian to represent the interests of the infant remaindermen under the residuary trust, urged that the tax be apportioned. The Surrogate overruled the constitutional objections and directed apportionment. The New York Court of Appeals by a divided court reversed, holding §124 repugnant to the federal estate tax law — particularly to [§2205] — and in violation of the supremacy (Art. VI, cl. 2) and the uniformity (Art. I, Sec. 8, cl. 1) clauses of the Constitution. The importance of the question moved us to grant certiorari.

We are of opinion that Congress intended that the federal estate tax should be paid out of the estate as a whole and that the applicable state law as to the devolution of property at death should govern the distribution of the remainder and the ultimate impact of the federal tax; accordingly, §124 is not in conflict with the federal estate tax law. This conclusion is based upon the provisions of the Revenue Act of 1916, 39 Stat. 756, and subsequent acts, their legislative history and their administrative interpretation.

In the Act of 1916 Congress turned from the previous century's inheritance tax upon the receipt of property by survivors (see Knowlton v. Moore, 178 U.S. 41; Scholey v. Rew, 23 Wall. 331) to an estate tax upon the transmission of a statutory "net estate" by a decedent. That act directed payment by the executor in

the first instance, §207, but provided also for payment in the event that he failed to pay, §208. It did not undertake in any manner to specify who was to bear the burden of the tax. Its legislative history indicates clearly that Congress did not contemplate that the Government would be interested in the distribution of the estate after the tax was paid, and that Congress intended that state law should determine the ultimate thrust of the tax.[1] That Congress from 1916 onward has understood local law as governing the distribution of the estate after payment of the tax (with the limited exceptions created by [§§2206 and 2207], to be discussed presently) is confirmed by [§2055(c)], dealing with charitable deductions, which recognizes that estate taxes may be payable in whole or in part out of certain bequests, etc. "by the law of the jurisdiction under which the estate is administered." The administrative interpretation has been in accord, and that has been the understanding of the federal courts, and of some state courts.

In reaching a contrary result, the court below relied primarily upon [§2205]. But that section does not direct how the estate is to be distributed, nor does it determine who shall bear the ultimate burden of the tax. As pointed out before, while the federal statute normally contemplates payment of the tax before the estate is distributed, [§2002], provision is made for collection of the tax if distribution should precede payment. [§7404.] If any distributee is thus called upon to pay the tax [§2205] provides that such person "shall be entitled to reimbursement out of any part of the estate still undistributed or by a just and equitable contribution by the persons whose interest in the estate of the decedent would have been reduced if the tax had been paid before the distribution of the estate." By that section Congress intended to protect a distributee against bearing a greater burden of the tax than he would have sustained had the tax been carved out of the estate prior to distribution; any doubt that this is the proper construction is removed by the concluding clause of the section specifically stating that it is "the purpose and intent of this [chapter] that so far as is practicable and unless otherwise directed by the will of the decedent the tax shall be paid out of the estate before its distribution." Section [2205] does not command that the tax is a nontransferable charge on the residuary estate; to read the phrase "the tax shall be paid out of the estate" as meaning "the tax shall be paid out of the *residuary* estate" is to distort the plain language of the section and to create an obvious fallacy. For in some estates there may be no residue or else one too small to satisfy the tax; resort must then be had to state law to determine whether personalty or realty, or general, demonstrative or special legacies abate first. In short, [§2205], especially when cast in the background of Congressional intent discussed before, simply provides that, if the tax must be collected after distribution, the final impact of the tax shall be the same as though it had first been taken out of the estate before distribution, thus leaving to state law the determination of where that final impact shall be.

1 Congressman Cordell Hull, one of the supporters of the 1916 Act and its reputed draftsman, declared: "Under the general laws of descent the proposed estate tax would be first taken out of the net estate before distribution, and distribution made under the same rule that would otherwise govern it. Where the decedent makes a will he can allow the estate tax to fasten on his net estate in the same manner, or if he objects to this equitable method of imposing it upon the entire net estate before distribution he can insert a residuary clause or other provision in his will, the effect of which would more or less change the incidence of the tax." 53 Cong. Rec. 10657.

Congressman Kitchin, Chairman of the House Ways and Means Committee, stated: "We levy an entirely different system of inheritance tax. We levy the tax on the transfer of the flat or whole net estate. We do not follow the beneficiaries and see how much this one gets and that one gets, and what rate should be levied on lineal and what on collateral relations, but we simply levy on the net estate. This also prevents the Federal Government, through the Treasury Department, going into the courts contesting and construing wills and statutes of distribution." 53 Cong. Rec. app. p. 1942.

Respondents also rely on [§2206], authorizing the executor to collect the proportionate share of the tax from the beneficiary of life insurance includible in the gross estate, and [§2207], authorizing similar action against a person receiving property subject to a power [of appointment], as forbidding further apportionment by force of state law against other distributees. But these sections deal with property which does not pass through the executor's hands and the Congressional direction with regard to such property is wholly compatible with the intent to leave the determination of the burden of the estate tax to state law as to properties actually handled as part of the estate by the executor.

Since §124 of the New York Decedent Estate Law is not in conflict with the federal estate tax statute, it does not contravene the supremacy clause of the Constitution. Nor does the fact that the ultimate incidence of the federal estate tax is governed by state law violate the requirement of geographical uniformity. Cf. Phillips v. Commissioner, 283 U.S. 589, 602.

The judgment is reversed and the cause remanded for further proceedings not inconsistent with this opinion.

Reversed.

NOTE

1. *Federal impact of state apportionment.* Note the reference in Riggs v. Del Drago to a Congressional "intent to leave the determination of the burden of the estate tax to state law as to properties actually handled as part of the estate by the executor." If this implies that the states may not apportion against non-probate property, the implication has been consistently ignored by state statutes and practice. What if the state apportionment formula would impose a heavier — or a lighter — burden on life insurance beneficiaries and recipients of appointive property than is imposed by §2206 and §2207 of the 1954 Code?

Although Riggs v. Del Drago seems to imply that apportionment has no bearing on the *amount* of federal estate tax due, in fact it plays a role in determining the amount, as well as the distribution, of the tax. Thus, if the residue of an estate is left to charity or to the decedent's surviving spouse, the amount of the charitable or marital deduction will be affected by whether the tax is to be paid out of the residue or apportioned among the beneficiaries of the estate. See §2055(c) and §2056(b)(4)(A). For this reason, the federal courts sometimes have to pass on questions of state apportionment law in federal estate tax proceedings. See, for example, Second National Bank v. United States, 222 F. Supp. 446 (D. Conn. 1963) (direction in will against apportionment held to be ineffective, with result that state apportionment statute controls and residuary bequest to surviving spouse is not diminished by federal estate taxes). A proceeding to compel reimbursement under §2205 may also require the federal court to decide troublesome questions of state apportionment law, as in Doetsch v. Doetsch, 312 F.2d 323 (7th Cir. 1963) (conflict of law re apportionment when gross estate includes out-of-state inter vivos trust).

2. *Testamentary clauses negating apportionment.* State apportionment statutes typically apply except where the testator "otherwise directs in his will," and §2206 and §2207 of the Code (relating to life insurance beneficiaries and recipients of property subject to a taxable power of appointment) also permit the decedent to direct in his will that the tax shall not be apportioned. The decedent in In re Mills' Will, 272 App. Div. 229, 70 N.Y.S.2d 746 (1st Dept. 1947), directed that all death taxes "imposed upon my estate or any part thereof, or the transfer thereof or any right of succession thereto" be paid out of the residuary. The court held that this direction was not sufficiently clear to negate the equitable apportionment required by §124 of the New York Decedent Estate Law; the testator, a former Secretary of the Treasury, had created certain inter vivos trusts that were outside the probate estate but included in the taxable estate, and the court held that the reference in his will to death taxes "on my estate" referred only to his probate estate. The court implied that a simple direction that "all inheritance, estate, transfer and succession taxes be paid out of my residuary estate" would be sufficient to negate §124 of the

New York law. In McLaughlin v. Green, 136 Conn. 138, 69 A.2d 289 (1949), however, a direction of this character was held insufficient under a similar Connecticut law, and the court suggested that a more elaborate formula be employed. There is a large volume of litigation on the effectiveness of testamentary clauses negating apportionment, often stemming from a post-mortem realization that payment of death taxes from the residue will diminish the share going to the surviving spouse and thus increase the federal estate tax by reducing the marital deduction. As the foregoing cases indicate, testamentary clauses are sometimes disregarded by the courts because the status of inter vivos transfers is left ambiguous by the clause. See also In re Halsted's Estate, 174 Misc. 292, 20 N.Y.S.2d 627, aff'd without opinion, 26 N.Y.S.2d 310 (App. Div. 1st Dept. 1941), where a clause directing payment of death taxes out of the residue of an estate was held to be nugatory because there was no residue.

3. *Non-statutory apportionment.* Even without statutory authority, state courts have been increasingly willing to apply a doctrine of equitable apportionment to relieve the residuary legatees of the tax caused by inter vivos transfers and other non-probate property. Regents of the University System v. Trust Co. of Ga., 194 Ga. 255, 21 S.E.2d 691 (1942); Carpenter v. Carpenter, 267 S.W.2d 632 (Mo. 1954). See also Dodd v. United States, 223 F. Supp. 785 (D.N.J. 1963), holding that the New Jersey rule requiring the federal estate tax to be paid from the residue in the absence of a contrary direction by the testator permitted apportionment *within the residue;* the residue was divided between the testator's children and his surviving spouse, and the court held that the tax was payable in full out of the share going to the children because the wife's share qualified for the marital deduction and did not contribute to the tax liability. Note how this result affected both the amount and the distribution of the tax burden. Would it have been more equitable to charge the children's share of the residue with the tax attributable to them, and to divide the balance of the tax between the children and the widow?

SECTION B. THE GIFT TAX

A gift tax return must be filed by any person who makes a gift (or several gifts in one calendar year) to any one donee of a value of more than $3000, or a gift of a future interest regardless of its value. §6019(a). The return must be filed even if the gift is not taxable because the donor has not exhausted his $30,000 exemption. Donees were formerly required to file information returns, but this requirement was eliminated in 1959.

In Baur v. Commissioner, 145 F.2d 338 (3d Cir. 1944), it was held that a donee of a nontaxable gift (e.g., a gift of less than $3000) is liable for an unpaid tax on a gift made by the same donor to another donee in the same calendar year, by virtue of §6324(b), and that this liability could be enforced even though the donor was not insolvent at the time of the gifts and was not made insolvent thereby. See also Moore v. Commissioner, 146 F.2d 445 (2d Cir. 1945).

If the donee's interest in the transferred property is defeasible (for example, by the donee's predeceasing the donor or by the exercise of a power to alter or amend vested in a third party), may transferee liability be imposed upon the donee? See Estate of Sanford v. Commissioner, supra page 1150.
